Romantic America Series

On picture drawn by William Penn and his party on the road to Pennsbury Manor. The historic place of residence on the Delaware River about four miles above Bristol. The latter city has stepped on the Penn's Pet Tavern at Penn and Valley Cities, formerly Philadelphia. At the right of the tavern is the first shipyard in the province of Pennsylvania and above the building of the first boat that successfully went down the Delaware River was begun. Farmers for the shipyard were there being seen at the left. Behind the buildings appeared in the world. Here, upon a dry dock, workmen are repairing the vessels will rest the problem of carrying out [illegible] of Uncle Sam's extensive fleet of boats for the war and for the reconstruction period after the war. In the inset above are two ships alongside the wharf. Here ships will be building, as the view

BUILDING THE FIRST AMERICAN SHIP ON THE DELAWARE, IN 1701, in the Province of Pennsylvania, Where Now, Only a Short Distance From the Same Place, the United States Government is Building 50 Ships at One Time in One Shipyard: From a Painting by J. L. G. Ferris

The GREATEST MOTHER in the WORLD

Stretching forth her hands to all in need; to Jew or Gentile, black or white; knowing no favorite, yet favoring all.

Ready and eager to comfort at a time when comfort is most needed. Helping the little home that's crushed beneath an iron hand by showing mercy in a healthy, human way; rebuilding it, in fact, with stone on stone; replenishing empty bins and empty cupboards; bringing warmth to hearts and hearths too long neglected.

Seeing all things with a mother's sixth sense that's blind to jealousy and meanness; seeing men in their true light, as naughty children—snatching, biting, bitter—but with a hidden side that's quickest touched by mercy.

Reaching out her hands across the sea to No Man's land; to cheer with warmer comforts thousands who must stand and wait in stenched and crawling holes and water-soaked entrenchments where cold and wet bite deeper, so they write, than Boche steel or lead.

She's warming thousands, feeding thousands, healing thousands from her store; the Greatest Mother in the World—the RED CROSS.

Armstrong's Linoleum

Circle A Trade Mark — Reg. U.S. Pat. Off.

For Every Room (A) in the House

ANY child could be happy in this playroom, because it is cheerful, colorful, and ideally equipped for romping, tumbling, and the exercise of childhood fancies. The walls are gay with the adventures of *Alice in Wonderland*. The furnishings and hangings merge pleasingly into the general picture. The floor is bright and dainty, and fulfils the practical requirements of a playroom or nursery.

It is an Armstrong's Linoleum floor in a tile effect. Note how well it harmonizes with everything else in the room. It is very durable. The tough, elastic fabric wears well under scraping, scuffling feet and sliding furniture.

Armstrong's Linoleum is practically germ-proof. The linseed oil it contains, chemists say, is deadly to disease germs. It has no cracks and crevices to catch the dirt. It is resilient, and breaks the frequent falls of the little ones. Its smooth surface offers nothing to trip over. There are no rough edges to damage dainty frocks. It is by all odds the most economical floor for a nursery or playroom.

Two appropriate patterns for a nursery floor

Linoleum is made of powdered cork, wood flour, and oxidized linseed oil, pressed on burlap. Be careful you get it. For there are inferior floor coverings nowadays that look like linoleum on the surface, but which are merely imitations. Remember these two easy ways to tell genuine linoleum. First, look at the back and make sure it's burlap. Second, try to tear it. Imitations tear easily.

Better still, ask for Armstrong's Linoleum by name—there *is* a difference.

Visit your dealer in house-furnishings today, and have the newest Armstrong designs shown to you. It will prove a pleasant and profitable experience.

Armstrong's Linoleum will make an artistic, sanitary floor for any room in your house. Perhaps for your particular style of hallway, living-room, or dining-room the Parquetry Inlaid designs would be most suitable. They come in a score of patterns; are rich, warm, and dignified in appearance. The colors go clear through the fabric.

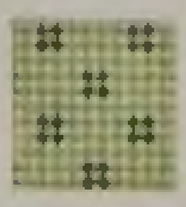
Or perhaps the delicate jaspé (moire) effects will better harmonize with your scheme of interior decoration. They come in attractive brown, blue, green, gray, and tan tones.

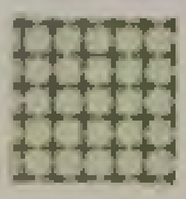
For your bedrooms, there are beautiful matting and carpet effects. Also dainty plain colors in brown, rose, blue, tan, gray, and green. Whatever patterns you use—or wherever you use them—you are certain to have an artistic pleasing effect in the room, and, what is equally important, a perfectly sanitary base for your rugs.

The use of linoleum for every room in the house has been long established in Europe. Americans of good taste are adopting the idea in rapidly increasing numbers.

Send for our new book, "The Art of Home Furnishing and Decoration," by Frank Alvah Parsons, America's foremost authority on interior decoration. It treats of the artistic necessities of every home and tells how to use linoleum effectively in every room. The author discusses his interesting subject in characteristically illuminating and intimate style. Sent with portfolio of de luxe color-plates of home interiors for 20 cents in stamps.

Another pattern — and the one above on floor





Armstrong Cork Company, Linoleum Department, Lancaster, Pennsylvania

Both the color and the texture of objects used in a child's room should suggest cleanliness, freshness, cheerfulness, and durability. At the same time they should represent *his* interests and *his* pleasures. To all these ends linoleum is expressly adapted. The walls, furniture, hangings, and toys in this room have been selected to harmonize with these ideas and with the linoleum floor which is ivory, turquoise blue, and light gray in color.—FRANK ALVAH PARSONS

ARMSTRONG UNIFORMS
and Equipments

THE ARMSTRONG UNIFORMS
CHICAGO
MADE ON HONOR

We Shall Not Sleep

"In Flanders fields
the poppies blow
Between the Crosses,
row on row,
That mark our place;
and in the sky
The larks still bravely
singing fly,
Scarce heard amidst
the guns below.

We are the dead.
Short days ago we lived,
felt dawn,
saw sunset glow,
Loved and were loved,
and now we lie
In Flanders fields.

Take up our quarrel
with the foe.
To you from failing hands
we throw the Torch-
be yours to hold it high;
If ye break faith
with us who die,
We shall not sleep,
though poppies grow
In Flanders fields."

Courtesy of [illegible]

In behalf of the brave men who have enlisted in the fight of right against might we reprint the above lines by Col. McCrae.

As an inspiration to war giving and war sacrifice it strikes a major note. There is no war appeal to which it is not applicable.

This beautiful lyric of the war was written by Lieutenant Colonel Dr. John McCrae of Montreal, Canada, while the second battle of Ypres was in progress.

The author's body now lies buried in Flanders fields.

Is it conceivable that we shall "break faith" with those "who die" for us?

THE CHILDREN'S CHRISTMAS THIS YEAR

The Easily Made Christmas Doll That Fits the Times

Dolls Dressed in the Costumes of Our Allies

For Gifts or Bazaars: By Jane Porter

A good seller for a bazaar. Children both old and young will love our little Scotch laddie in his Highland costume.

The Serbian lady on the left is brilliant in her green satin skirt, blue bodice with bronze braid and bright red kerchief over the stiff green hat.

The little Russian lady on the right is also gay in color. Her skirt is red silk, her apron made of bits of lace, and the sleeves of her waist decorated in cross-stitch in bright colors.

The Chinese boy is sure to bring a smile to everyone's face—he is so very serious. Odd bits of silk or ribbon can be used to make his costume.

Our little Welsh doll, with her bright red hood and her stiff black hat and basket, makes you think of Little Red Riding Hood, does she not?

And who could resist this pair? The little Yankee soldier is telling his new French brother, the Blue Devil, that he is with him to the end.

Both the American soldier doll in khaki and the Blue Devil in horizon blue are sure to attract attention and will sell well separately or as a pair.

The kiddies will love the Red Cross doll in her gray dress, with white apron. Her blue cape, lined with bright red, is much admired by all France.

Here is a little Alsatian maid, with her friend from Brittany. The headdress of each is quaint; the most characteristic feature of the costumes is that the bow of the Alsatian child is black, as is the cap of the Brittany child. These are never in color.

You all know the little Japanese lady in her bright-flowered kimono made of bits of ribbon, with a broad sash which is made of cherry-colored silk.

The little Italian flower girl has a purple cotton skirt, with a bit of Roman striped ribbon as an apron. Her headdress is white and reaches to the waist at the back.

Our brave little sailor boy is telling his new little Belgian friend, Suzanna, that things will soon be better now that he is there. Her skirt is red, her apron black and the cap and surplice part of her waist yellow with a black edge.

For Gifts or Bazaars: By Jane Porter

A good seller for a bazaar. Children between eight and ten years old will love our little Scotch lassie in her typical costume.

The little Russian lady on the right is also gay in color. Her skirt is red silk, her apron made of bits of lace and the sleeves of her waist decorated in rows of bright colors.

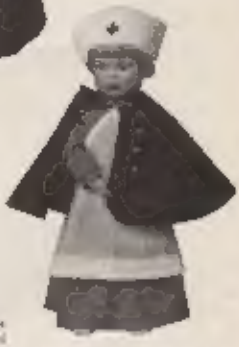
The Serbian lady on the left is brilliant in her green velvet skirt, blue bodice with bronze braid and bright red kerchief over the stiff green hat.

The Chinese boy is sure to bring a smile to everyone's face—he is so very serious. Odd bits of silk or ribbon can be used to make his costume.

Our little Welsh doll, with her bright red hood and her stiff black hat and bodice, makes you think of Little Red Riding Hood, does she not?

And she could wear this suit! The little Yankee soldier is telling his new French brother, the Blue Devil, that he is with him to the end.

Both the American soldier doll in khaki and the Blue Devil in horizon blue are sure to attract attention and will sell well separately or as a pair.



The kiddies will love the Red Cross doll in her gray dress, with white apron. Her blue cape, lined with bright red, is much admired by all Poilus.

Here is a little Alsatian maid, with her friend from Germany. The headdress of each is quaint, the most characteristic feature of the costumes is that the bow of the Alsatian child is black, as is the top of the German child. These are never in color.

You all know the little Japanese lady in her bright flowered kimono made of bits of ribbon, with a broad sash which is made of cherry colored silk.

The little Italian flower girl has a purple cotton skirt, with a bit of Roman striped ribbon as an apron. Her headdress is white and reaches to the waist at the back.

Our brave little sailor boy is telling his new little Belgian friend, Jeanette, that things will soon be better now that he is there. His shirt is red, his apron black and the cap and surplice part of his suit yellow with a black edge.

An Almost Unlimited Opportunity for Dealers!

Cleveland Tractor

Today is the day of essentials.

The non-essentials, the unnecessary things must give way to those things which war conditions demand must have precedence.

And the Tractor is one of the greatest of the essentials.

The world demands and must have Tractors. A sufficient food supply will depend upon them.

Automobile Dealers, Implement Dealers, Machinery Dealers and Dealers handling allied lines are finding that the Cleveland Tractor fills an immediate need and enables them to maintain their volume of business which would otherwise drop off because of decreased sales in other lines.

The Tractor today is an absolute necessity.

The demand is already created.

It is almost unlimited.

It simply remains for the dealer to grasp the opportunity and prepare to supply the demand.

But he must handle a Tractor of the right sort, properly designed, properly constructed, backed by an organization with abundant capital and resources.

He must handle a Tractor that does the things which the purchaser wants a Tractor to do.

The Cleveland Tractor Company is composed of some of the leading business and financial men of the city of Cleveland, Ohio. It is headed by Mr. Robin H. White, one of the world's foremost engineers.

In the short space of about fifteen months this business has expanded and expanded until its capacity is 1,500 Cleveland Tractors per month.

In that time The Cleveland Tractor Company has grown to be *the largest producer of crawler type tractors in the world.*

This record speaks for itself.

Could anything be more convincing as to the possibility for dealers to establish a sound and stable business?

The Cleveland Tractor is decidedly different from any other.

It is an all-purpose machine which does a wider range of work than is possible with other types.

It carries, lays down and picks up its own endless tracks like the giant "tanks" on the European battlefields.

It can travel almost anywhere. There is almost no limit to the nature of work it does.

The Cleveland Tractor is comparatively small, only 96 inches long, 52 inches high, 90 inches wide, and weighs less than 3,200 pounds. Its traction surface is about 600 square inches—a little over five pounds per square inch.

On the farm, it plows, it harrows, it sows, it reaps. It does hauling of all kinds. It does the hundred and one odd jobs which are always to be done.

One Cleveland Tractor can do as much work as a number of horses and several men—and it requires only one man to run it.

There are more than six million farms in America and the majority of them can use Cleveland Tractors to advantage—to increase production and cut down costs.

The world needs and wants Cleveland Tractors by the thousands.

The machine needs but to be shown and demonstrated.

As stated before our capacity is 1,500 Cleveland Tractors per month, and we are planning to increase this just as fast as buildings can be constructed on our 74 acres of land and equipment installed.

With this increased capacity we are prepared to contract with dealers for unoccupied territory.

Now is the opportune time.

Now is the time to get ready.

When writing, dealers will enable us to handle their applications to better advantage if they will inform us fully as to their present business, their organization and facilities, together with any other information that will enable us to judge of their qualifications.

THE CHILDREN'S CHRISTMAS THIS YEAR

The Easily Made Christmas Doll That Fits the Times

Dolls Dressed in the Costumes of Our Allies

For Gifts or Bazaars: By Jane Porter

A good seller for a bazaar. Children both old and young will love our little Scotch soldier in his Highland costume

The Serbian lady on the left is fetching in her gown with short blue bodice with brown braid and bright red kerchief over the stiff green hat

The little Russian lady on the right is also gay in color. Her coat is red and her apron made of bits of skin and the sleeves of her waist outlined in cross-stitch in bright colors

The Chinese boy is sure to bring a smile to everyone's face—he is so very serious. Odd bits of silk or ribbon can be used to make his costume

Our little Welsh doll with her bright red hood and her stiff black hat and basket makes you think of Little Red Riding Hood, does she not?

And who could resist this pair? The little Yankee soldier is telling his new French brother, the Blue Devil, what he is sent here to the end

Both the American soldier child at home and the little Devil in horizon blue are sure to attract attention and will be sent separately or as a pair

The children will love the Red Cross doll in her gray dress with white apron. Her cape is trimmed with bright red, as much admired by all France

Here is a little Alsatian maid with her friend from Brittany. The headdress of each is quaint, the most characteristic feature of the costumes is that the bow of the Alsatian child is black, as is the cap of the Brittany child. These are never in color

You all know the little Japanese lady in her bright flowered dresses made of bits of ribbon, with a broad sash which is made of cheese-cloth cut

The little Italian flower girl has a purple cotton skirt, with a bit of Roman striped ribbon as an apron. Her headdress is white and reaches to the waist at the back

Our brave little sailor boy is sure to bring his new little Belgian friend Suzanne, that things will soon be better now that he is there. Her shoes are red, her apron brush and the cap and narrow part of her waist yellow with a black edge

I use this cream because it adds a charm to the skin that is intensely gratifying

THE experience of many well-groomed women proves that *soft skin* never roughens or chaps and that in this Cream there is something that makes the skin soft almost as soon as it is applied. I always use

The skin *stays soft* and velvety all the time by simply using a little every day. Then, too, I find it keeps the skin texture so fine and clear and refreshed that I'm always happy in knowing my complexion is admired. My hands and arms never redden or chap after motoring or other outdoor exposure. I rub on a few drops of

Hinds Honey and Almond Cream

before going out and sometimes on returning. It's not a bit sticky or greasy. You'll enthuse over it also, after a few weeks' use. It will prove to be *a real necessity*

Hinds Creamis Talcum, like the scent of old-time gardens, softens with its delicate fragrance and velvety texture. Its pleasures and comforts are now shared by a legion of mothers and babies.

Hinds Cream Soap is nothing like the delicate, luxurious creamy lather quickly by the mineral cleansing and softening effect of its creams. Lather. Equally good as a shaving soap.

Many women are writing for SAMPLES. Be sure to enclose stamps with your request. 2c for Cream, 6c for trial cake of Soap, 3c for miniature can of Talcum.

A. S. HINDS, 200 West Street

When Johnny comes marching home

He has cleaned up over there.

The Croix de Guerre and the D. S. Cross jingle on his khaki blouse.

And now the job is done, he is looking toward the setting sun—thinking of the big home-coming.

On this side every one of us is ready with the glad hand of welcome.

Howdy, Boy! We're PROUD of you!

HENDEE MANUFACTURING COMPANY
Springfield, Massachusetts

W.S.S

Indian Motocycle

"Three times to the cleaners"

and you've paid for it all over again

"HAVE you seen Louise's dear little georgette blouse?

"She came in wearing it one afternoon. I admired it and showed her my new crepe de Chine.

"'But isn't it wicked,' I said, 'to have to send it to the cleaner's? By the time you have had it cleaned three times, you have paid for it all over again.'

"'You don't mean to say you send it to the cleaner's!' she said.

"'Yes!' I answered, 'you wouldn't trust crêpe de Chine to soap and water, would you?'

"'Of course not,' she said. 'I use Lux.'

That is the way the story of Lux is carried from one woman to another. As a matter of fact, Lux is the most modern form of soap—but it is so different from anything you have ever known as soap that you think of it as something in a class entirely by itself.

And that is precisely what Lux is. *There is "nothing like it"* you hear whenever Lux is mentioned.

The miracle of Lux is that it comes in delicate, transparent pure flakes which dissolve the moment you drop them into hot water. Immediately you whisk them into a foamy, bubbling ether, then add cold water until lukewarm. Into the rich suds you drop your most delicate blouse.

Afraid? Not for a second!

Lux never hurt anything that pure water alone would not injure.

Then let your blouse soak for a few minutes. *Never a bit of rubbing.* You simply dip your blouse up and down and press the gentle cleansing suds again and again in through the precious fabric. Every speck of dirt melts away into the suds without a bit of injury to a single delicate thread. Your blouse comes out just as new and fresh as the day you bought it.

It isn't washing that hurts sheer fabrics. It's rubbing soap on them, and rubbing them again to get out the soap and dirt that wears and tears them—takes away their finish with the first washing.

Every woman who tries Lux wonders how she ever could have rubbed cake soap on anything she valued.

Now she buys the dainty things she loves to have and wears them often. They are not a bit of care or expense to her. She keeps them fresh and new the Lux way with no rubbing.

Try Lux in your home. Get it today from your grocer, druggist or department store.—Lever Bros. Co., Cambridge, Mass.

Cleanse these things yourself with Lux

Sweaters
Baby's Woolens
Silk Underwear
Silk Stockings
Washable Gloves
Collars
Fine Table Linens
and Petticoats
Crêpe de Chine Blouses

LUX

Even in hard water Lux makes wonderful suds

Sweaters soft and unshrunken!

"I have a white sweater which has been washed several times with Lux and it is still white and fine—not shrunken."—Mrs. F. W. B. Pratt Harding, Penn.

The children's things like new

"I washed a child's white corduroy coat with Lux and it looked as good as new. It was very dirty, and I didn't have to rub it at all."—Mrs. F. W. Gordon, Portland, Me.

BEAN'S PATENT FLEXIBLE POLICE CLUBS

The Club is made of Sole Leather, cut to required Form, and brought together under heavy Pressure over Elastic Steel Spring Wires, Cemented and Riveted, and covered with the same Material, securing a perfect Surface without Break or Seam, and very slightly Elastic; over this, to form the Handle, a Cover is neatly Braided. A Swivel is secured in the end, through which the Strap is passed. It is Neat and Ornamental, has an easy feeling in the Hand, and a Firmer Grip can be had upon it than on any Wooden Club. It cannot be broken, and will last a Lifetime. It has been thoroughly tested, and is Endorsed as at once the most Effective and Humane Club in use. Adopted by many Prominent Police Departments at Home and Abroad. Every Club Fully Warranted.

TOWER'S ADJUSTABLE DOUBLE LOCK WITH PATENT LOCK

The Patent Stop Prevents Locking by Effort of the Prisoner or by Accident, before the Handcuffs are Closed on the Limb. When in use, the Forward End of the Stop Projects Above the Surface of the Bow, and while Allowing the Bow to Enter the Lock Frame, Stops it before the Bolt has Passed into the Notches. When Closing the Shackle on the Limb of a Prisoner, a Slight Pressure on the Top Is Simply Passing a Finger Over it When Ready to Lock—Depressed Even with the Surface of the Bow, Which Then Passes Through and Is Self-Locked; Weight 18 ozs. with Key. Per Pair

Buckets

Labeled Fibre Fire Pails

Fig. 1293

Approved by National Board of Underwriters

This label is a guarantee that every "Labeled" pail has been approved at the factory by the Underwriters' Laboratories of the National Board of Fire Underwriters of the United States.

A reproduction of this label on a card is on file in every insurance exchange connected with the fire underwriters. The card approves these pails as follows:

"Hand fire extinguishers of the above type, shown by examination conducted by Underwriters' Laboratories to be in accordance with the requirements of the National Board of Fire Underwriters and examined at factories and passed by Underwriters' Laboratories, have labels attached. The label is evidence of the proper construction of the appliance at the factory."

The value of this label to factories, mills, railroads, etc., is self-evident. It is proof that, wherever in use, these labeled fire pails are certain to be acceptable to the insurance companies.

[illegible] fire pails are made from galvanized iron, are one solid piece without seams or cracks. There is no metal to rust and become leaky—no staves to warp—bottom can't drop out. Once filled, they remain definitely and are always ready for use when the emergency arises. Although unusually durable, the "Labeled" pails are light in weight.

Round bottom fibre pails . . . . . per dozen

Galvanized Round Bottom Fire Pails

Fig. 1 . .

Duplex Folding Water Pails

Fig. 1 . .
No. 12, Open

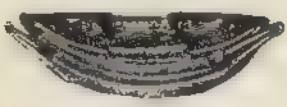

Fig. 1209
No. 12 Folded, Double
Handy to Carry - Never in the Way

The Duplex Water Pails are the only collapsible or folding pails that you can throw water with or that can be set down without losing contents. Rigid, strong and simple, they occupy less space when folded than any other. Made of heavy brown canvas, waterproofed. Metal parts are spring steel, rust-proofed. They are watertight in any climate and will not become brittle or decay through use or disuse

Boatmen, campers, horsemen and sportsmen or fire companies, railroads and steamships can appreciate a space-saving water pail.

No. 4. Capacity, 6 quarts; diameter, 10 inches, depth 7½ inches folds into 10¼ x 6 x 2¼ inch space . . . . . each $1.00

One in a box

The Safety Fire Bucket Tank

Listed by Underwriters' Laboratories, Inc
Accepted and Preferred in Place of Fire Pails and Casks

Fig. 1 [illegible]

Tank made of heavy black iron sheets all galvanized after being made, and japanned in red. Six buckets with self-raising handles submerged into liquid chemical solution

Largely used by mills, lumber yards, factories, warehouses, stores, outbuildings, etc., where an adaptable, economical ready fire protection is desired

No 1. Height 31 inches; diameter, 15½ inches, containing 25 gallons of chemical solution, six 10-quart buckets rubber gasket and stand for tank to rest on

No. 2. Height, 34 inches; diameter, 18½ inches; containing 40 gallons of chemical solution, six 14-quart buckets, rubber gasket and stand for tank to rest on

Fig 1076

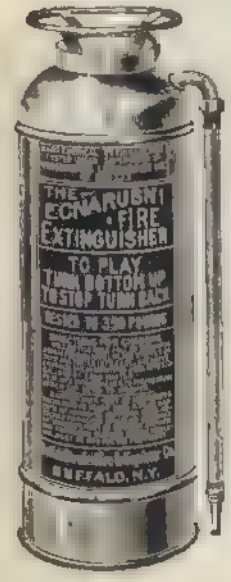

Fig 1071

The Ecnarusni Fire Extinguisher

Ecnarusni fire extinguisher consists of a cylindrical copper tank strongly built to withstand enormous pressure

To operate: The tank is filled with water and bicarbonate of soda, and a small quantity of sulphuric acid is suspended in the cylinder Inverting the extinguisher creates instantly a gas which not only acts as a propelling power for the liquid, but is in itself a solution which smothers fire, and is forty times as effective as one pail of water

The liquid and gas find ready access through a short hose connected to the extinguisher

So much pressure is instantly created by inverting the extinguisher that a durable stream is formed which will shoot fifty feet and lasts from two to three minutes

Pyrene Fire Extinguishers

Fig 1072

Pyrene is non-damaging and non-corrosive

Pyrene is the only effective extinguisher of fires in highly inflammable material—particularly oil or gasoline

Pyrene does not freeze at 50 deg. F. below zero and is good until used, because it does not deteriorate, neither does it evaporate, being enclosed in a sealed cylinder

The Pyrene extinguisher is easily operated and may be refilled as readily as a kerosene lamp. It is handsomely finished and may be carried in our special holder on the dash-board or any convenient point of your car.

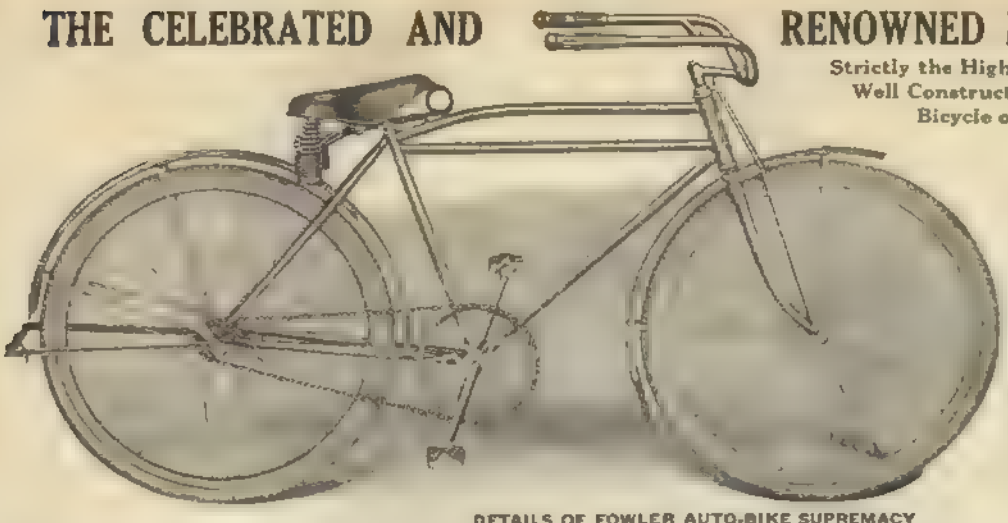
THE CELEBRATED AND RENOWNED FOWLER BICYCLES

Strictly the Highest Grade. Most Durable. Well Constructed and Most Satisfactory Bicycle on the Market today



HAS NO SUPERIORS

We have sold this same make Fowler for years, know the service it performs and the satisfaction it gives, therefore we again contracted with manufacturers

OUR IMMENSE CONTRACT

for bicycles for the coming season represents a BIG SAVING. Enables us to sell you the HIGHEST GRADE (STRICTLY GUARANTEED) Fowler bicycles at prices of second quality bicycles

THE MATERIAL IS OF THE BEST OBTAINABLE

The workmanship and finish is executed with utmost care by skilled mechanics who have been in the bicycle business for years—who know correct material, proper construction and have the ability to produce a bicycle that is right in every detail.

DETAILS OF FOWLER AUTO-BIKE SUPREMACY

This is not a machine designed simply to look like a motorcycle, but as a bicycle of highest quality throughout, especially designed and built for hard road service

In its construction is embodied such features of motorcycle design and equipment as are of practical service

The frame, of motorcycle pattern is especially reinforced to give the greatest possible strength, without excessive weight.

The fork is the truss type similar to that used in many motorcycles.

The handle bar is handsome in design and powerful in construction, the cross section [illegible] and strength

These are [illegible] and are exactly the same as used on many [illegible] makes of motorcycles

While it is not to be understood that this is an exceptionally heavy bicycle, it is built of extra heavy material and is safely believed to be the strongest, most durable and at the same time one of the lightest running bicycles that was ever built.

SPECIFICATIONS

FRAME—Motorcycle type with gracefully curved top tube, [illegible] which there are no kinks or sharp bends. Made throughout of 18 gauge Shelby seamless steel tubing. All joints are reinforced in accordance with motorcycle construction. Main frame tubes 1 inch in diameter. Heavy one piece pedal bracket fittings. Pinch bolt seat post cluster, all nickeled. Is mercerized wash

FORK—Truss type, pedal type. Special drop forged crown 18 gauge fork sides. Extra heavy, 1 inch head reamed to fit 1 inch handle bar stem with flush cap lock nut. Head fittings, outside cups and corner cups, 3/16 inch balls.

SEAT POST—Extra heavy forged top, rear 1 heavily nickeled.

WHEELS—Rims fancy enameled, fitted with any standard make [illegible] coaster brake to match. Perfection Anti Rust spokes 36 spokes front and rear

COASTER BRAKE—Any standard make, choice of New Departure, Corbin, Morrow, Atherton or Musselman Coaster Brakes.

CHAIN—Diamond No. 71 roller, 3-16x1 inch pitch.

HANGER—Excelsior one piece, specially designed for heavy work with large cups, cones and balls. Accurate and positive adjustment, 7-inch cranks of diamond shape.

SPROCKETS—From 26-, rear 10 tooth 1/2 x 1/2 inch pitch

MUD GUARDS—Drop pan, wide and heavy, with [illegible] front extension double flat at crown front and rear, carefully polished and heavily nickeled with leather splasher on front guard

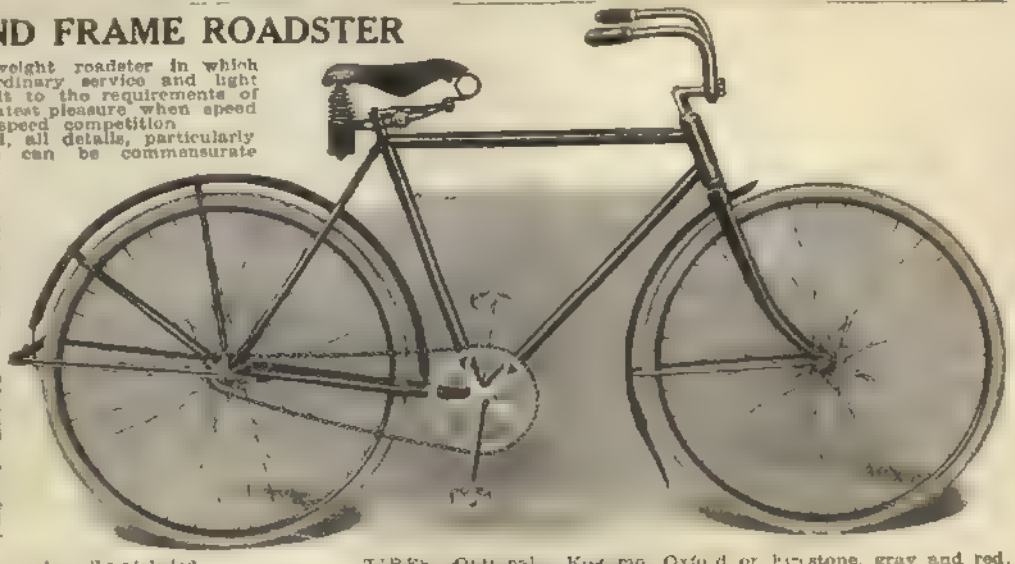
THE LIGHT DIAMOND FRAME ROADSTER

Our Fowler model 100 is a light weight roadster in which is combined ample strength for all ordinary service and light running qualities, especially adapting it to the requirements of tourists or those who attain their greatest pleasure when speed is an important factor, or in actual speed competition

While not designed as a racing model, all details, particularly moving parts are kept as light as can be commensurate with ample strength for hard road service.

There are many riders, particularly veterans of the good old days, who pin their faith unreservedly in the straight diamond frame, free from curves or auxiliary braces. To such, this machine comes as an old friend, having the qualities of the machines of hallowed memories developed and perfected by the evolution of modern structural methods



SPECIFICATIONS

FRAME—Diamond shape made in 20- 22- or 24 inch sizes from 1x19 gauge Shelby seamless tubing. Flush joints, heavily reinforced One piece head, pinch bolt seat post cluster with bolt nut and washer handsomely nickeled.

Covered bar fastener to prevent marring furniture
Steel shoe on nozzle, grooved into wood. Applied without the use of screws or nails. Grooved into wood under tremendous pressure
Three bellows, insuring constant and powerful suction
Patented Basket handle and bail, eliminating all future handle trouble
Furnished with wood or metal tops

1918 Model "K" Vacuum Sweeper . . . . . Each $9.30

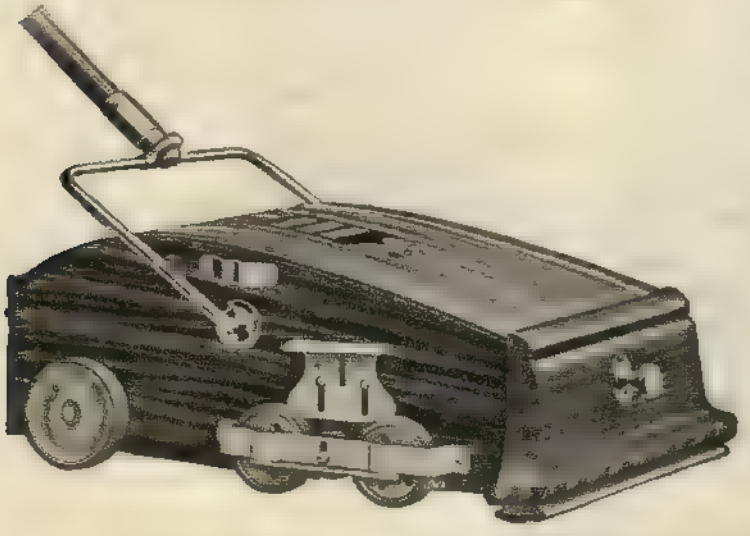
THE NEW No. 7 UNITED VACUUM SWEEPER

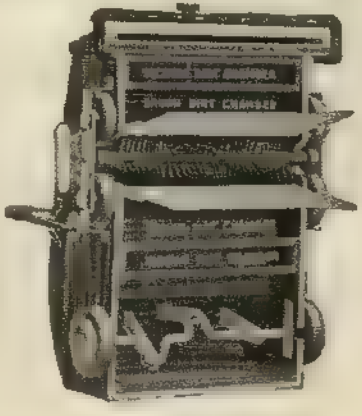
A Wonderful Achievement—A New Idea in Vacuum Sweepers

No Dust Bag to Clean—No Nozzle to Remove

A real innovation in vacuum sweeper construction.
All dust, coarse dirt and litter collected in Vacuum Dirt Chamber and Brush Dirt Chamber
Cleaned instantly with one operation by "spring lever" on side. Closes automatically
A cleaning device without a fault—perfect in every way
A vacuum sweeper cleaned by pressing a lever
Fully guaranteed.

All Orders Filled Same Day Received





SPECIAL FEATURES

Fitted with fibre bearings—will not rust or corrode.
Steel Pitmans.
Four row extra wide bristle brush
Four drive-wheels—insures positive, quick, brush action.
Metal shoe on nozzle—put on without screws or nails—grooved into wood by pressure
Heavy bumper cord on nozzle prevents marring furniture
Flanged wheels used entirely—tires cannot come off.
Inside cleaning brush operated by pulling rod back and forth.
Three bellows—insuring constant and powerful suction.
Improved handle bail—prevents all handle and bail trouble
Built lower and lighter in weight than the average sweeper
Body and top built entirely of wood veneer—rich mahogany finish - nickel trimming.

Model "The New No. 7 United" Vacuum Sweeper . . . . . Each $14.90

The Celebrated and Renown Fowler Bicycles

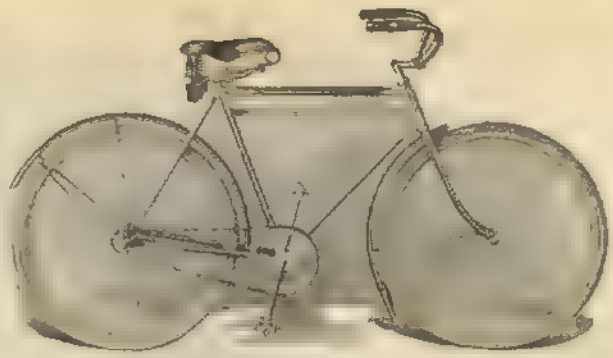
Strictly Highest Grade Fully Guaranteed

The Popular Fowler Double Bar Roadster

Fowler Model 200 is our popular, medium weight roadster, with double top bar, a machine specially adapted to the requirements of riders whose height makes advisable a higher frame than the auto bike, but at the same time is a solidly constructed machine for heavy service

The double top bar adds greatly to the strength and gives particularly staunch appearance, without noticeable increase in weight.

The black and green colored combination gives a handsome and dignified machine for middle aged riders, while the blue and white or carmine and white appeals to younger riders



THE POPULAR FOWLER DOUBLE BAR ROADSTER

SPECIFICATIONS

FRAME—Double bar type made in 20- 22- or 24-inch sizes of 1x16 Shelby seamless tubing with ½ inch center bar Flushed joints all carefully reinforced, making a practically indestructible frame. Seat post cluster pinch bolt type with nickeled bolt nut and cap washer.

FORK—Special drop forged crown, ½ inch 18 gauge seamless fork sides gracefully curved to match frame lines. 1 inch stem reamed to fit ⅞ inch handle bar stem with flush cap lock nut. Head fittings, outside cups and cones carefully hardened with ¼ balls

SEAT POST—Extra heavy forged top heavily nickeled

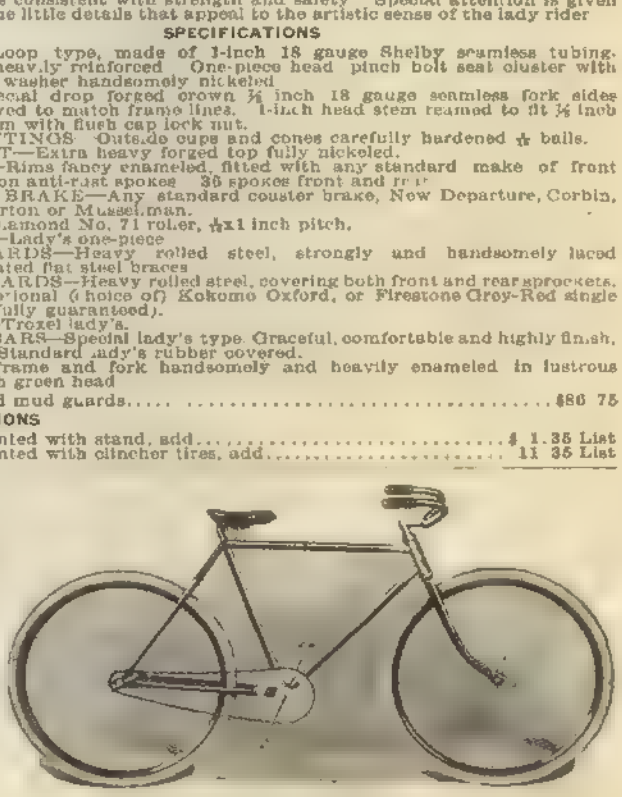
Boys' and Girls' Juvenile Models

These machines are juvenile in dimensions only, being of strictly high grade construction throughout with all the qualities of material, workmanship and finish of the regular lines. It is unfortunately common practice to build juvenile bicycles in any old way to get a low selling price We do not follow such methods and these machines have all the durability and running qualities of the standard lines.



BOYS' AND GIRLS' JUVENILE

SPECIFICATIONS

CAMP STOVES.

GASOLINE.

FOLDING.

The No. 4M one burner stove has 6-inch grate and interior stationary tank of 1½ hours capacity. The only equipment furnished with this size is a pressure pump and funnel for filling the tank. Gasoline tank is protected from the heat by a jacket, double air chamber and partition.

A meal for one or two people can be prepared on this marvelous little stove very satisfactorily.

Each

No. 4M—Dimensions, 9x9x4½ inches; weight, 8½ lbs **$10.00**

The No. 2M has six inch grates and gas tank of sufficient capacity to last two and one-half hours. The No. 3M has eight inch grates to accommodate 10 in. fry pan with same tank capacity.

Full equipment consists of 1 fry pan, coffee pot, 1 each sugar and coffee retainer, pressure pump and funnel.

Nos. 2M and 3M Kit open.

Folded.

The accompanying cuts illustrate the Nos. 2M and 3M stove set up and also folded, with equipment, all of which is packed inside for transportation.

Each

No. 2M—Dimensions folded, 5½x10x18 inches; weight complete, 17 lbs **$21.00**

No. 3M—Dimensions folded, 6x10x20 inches; weight complete, 20 lbs **23.00**

MINERS' LAMPS.

GUY'S ACETYLENE.

PIT LAMPS.

Each

No. 22SL—Lamp; has 2¾ inch polished brass reflector fastened to lamp with locknut screwed on burner tube; reflector strongly reinforced on back to protect from accidents; intended for use in rooms or entries with high roofs; brass lamp, bright finish **$1.40**

Equipped with self lighter. Has a 2½-inch deep brass polished reflector intended for miners working in wet places or where the roof is low. The reflector is deep enough to protect the burner tip from water.

Each

No. 28SL—Lamp; polished brass finish..... **$1.40**

GUY'S LAMP SUPPLIES.

	Per Gross
Lava Tips	**$2.60**
Rubber Gaskets	**2.00**
Tip Reamers or Needles	**7.00**

Reamer Cases—2 dozen size	**4.50**

	Per Dozen
Extra Bottoms—Brass	**$3.00**

NOTE—For Gasoline Torches see page 5078.

MINERS' LAMPS.

GUY'S ACETYLENE.

PIT LAMPS.

Each

No. 23—Lamp; has large, deep, 3-inch brass reflector, highly polished; intended for inspectors and mining engineers; brass lamp; no extra bottom; weight each, 1 lb..... **$1.30**

MINER' LAMP SUPPLY KITS.

GUY'S.

An assortment of the lamp supplies most frequently called for by the miner. Also the repair parts most liable to become lost or worn out, which require replacement.

Kit contains 6 dozen flat rubber gaskets, 2 dozen felts, 2 dozen felt holders, 2 dozen, screens, 12 dozen lava tips, 6 dozen reamers, put up in reamer cases, two in a case; 6 dozen flints, 1 dozen hexagon nuts, 1 dozen set screws, 1 dozen springs, 1 dozen caps, (these last four items are used in the make-up of the lighter on the reflector), ½ dozen lighter holders. This is a new contrivance that slips on to the tube instead of being fastened on to the reflector.

Each

No. LSK—Miners Lamp Supply Kits; weight each, 2 lbs. **$14.00**

JUSTRITE, ACETYLENE.

The Justright self lighting lamps require no matches. To light, cover reflector with palm of hand, hold a few seconds, then draw hand downward quickly, rubbing over steel wheel.

The lever water feed enables the user to regulate the size of the flame; valve is operated by means of a lever sliding back and forth over notches.

The spiral water feed forces the water around the spiral, a distance of 7 inches, this increases the gas resistance, prevents waste and produces an even, steady flame.

Reflector is highly polished German silver; valve stem is made of brass tubing; clasp is new design made of spring brass, holds lamp secure to cap shield; burner cap is imported German lava fitted with 4 air holes near tip, this prevents clogging and carbonizing.

SELF LIGHTING.

Made of the best quality brass, hand soldered.

The water feed is regulated by a valve controlled by a lever fitting tightly over raised notches which prevents the lever from working loose. The valve can be adjusted to permit a free water flow.

The reflector is polished brass, 3-inch diameter with wire edge.

Each

No. 277 — X-Ray Carbide Lamp; weight each, 4¼ ounces..... **$1.46**

Equipped with lever feed and a 2¼-inch reflector deeply concaved.

Each

No. 417—Miner's Lamp; polished brass finish; weight each, 5 oz..... **$1.46**

Has lever feed and a 2¼-inch polished brass reflector.

Each

No. 85—Miner's Lamp; complete with pocket carbide container; polished brass finish; weight each, 5 oz..... **$1.50**

Equipped with Jewel metal tip and an extra bottom. Has spiral water feed and 2¼-inch polished brass reflector.

Each

No. 121—Miner's Lamp; polished brass finish; weight each, 5 oz..... **$1.66**

Furnished with a heavy nickel plated, highly polished reflector, 2½-inch; burns 3 hours with one charge, producing a steady white 20 candle power light, which can be projected 200 feet.

Each

No. 100—Mine Superintendents' Lamp; complete with reflector hood, extra carbide container, rubber gasket, felt backing and burner tips; weight each, 5 oz..... **$2.20**

Invaluable to the sportsman, automobilist, farmer, miner or army officer.

Can be used in the same manner as any oil lantern and will give a 20 candle power strong, white, brilliant light which can be projected a distance of 200 feet when the reflector is attached. Equipped with an ingenious safety device, allowing the escape of excess gas, should there be any; absolutely safe and reliable.

Each

No. 10—Miner's Lantern; made of heavy brass, highly nickel plated and polished; height, 9¼ inches; width, 4½ inches; equipped with German silver reflector; weight each, 1½ lbs..... **$7.50**

One in a fibre case.

HEADLIGHTS.

For Drivers, Motormen, Miners, Inspectors, Etc.

Gives a penetrating light. Protected by strong lens. **Will not blow out.** Self-lighting attachment. Matches not required.

Burns 10 hours on one charge of carbide and water. Strong. Durable, Compact.

Each

No. 44—Without cap; weight of generator, 1½ lbs.; weight of headlight, 5 oz..... **$7.50**

CAPS.

Made of best quality duck, lined with flannelette; has black vizor and fibre-covered metal shield.

Per Dozen

No. 235—Miners' Caps, made especially for use with Justrite head-lights; all sizes..... **$7.00**

HUNTING SEARCH LIGHTS.

BRILLIANT, ACETYLENE.

A strong, well made light weight lamp, in black japanned finish. Throws a bright, penetrating light, is not affected by either wind, rain, heat or cold and is adapted for all kinds of work. Fitted with a strap for wearing on hat or cap, so as to leave the hands entirely free; a hinge joint enables the light to be tilted up or down at any angle; hinged darkening cover fitting over lens; rubber tube connects light with generator, which may be worn on belt or carried in pocket; has detachable base and burner which are suitable for a table or camp lamp when removed. Burns carbide; one filling, 4 ounces; will burn eight hours. Weight of lamp and head strap, 10 ounces.

Each

No. 1SL—Style number one, with single lens and plain candle flame burner..... **$10.00**

No. 1DL—Style number one, with double lens and plain candle flame burner..... **11.00**

No. 2DL—Style number two, with double lens and adjustable candle flame burner..... **11.30**

No. 3DL—Style number three, with double lens and adjustable flat flame burner..... **11.60**

No. 41L—Style number three, with interchangeable lens, adjustable flat flame burner and self lighter..... **12.30**

NOTE—For Gasoline Torches see page 5078.

HORSIE-TODDLER—one of the

CONSTRUCTION

Body and Hindquarters are one piece of thick Arizona Pine. Head and forelegs are of one piece also. Wheels and handle of selected hardwood. Swivel bearing through shoulder allows toy to be steered in any direction. Four wheels, widely spaced, give great stability. The axles are solid steel rods. The ends of these rods projecting through the wheels are covered with nickel-plated hub caps. All wheels equipped with metal bushings to prevent wear. Full shaped saddle being fitted to the body develops straight legs. Sells as big during the summer as at Christmas time. Finished in four colors as above.

FINISH

The finish has the appearance of baked enamel. The decorations in four colors are life-like and have none of that gaudy appearance so common to toys. The Horsie-Toddler is a sturdy, solidly-made toy—built to stand the hardest nursery knocks.

It is the ideal toy to induce outdoor play and develop the body. It is a winner with the kiddies wherever shown. The Horsie-Toddler gives the child everything that any child's vehicle does and is a horse besides.

"The Hit of the Toy World"

SIZES	AGE YEARS	HEIGHT INCHES	LENGTH INCHES	WHEELS INCHES	CRATED	DOZEN

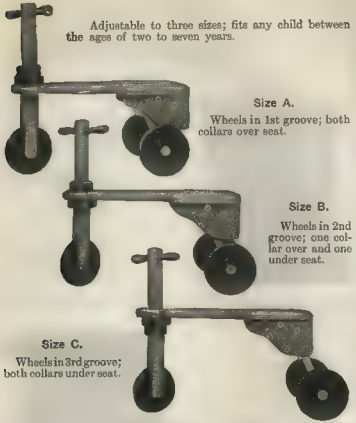
Shipped "Set-up."
Two of a size packed in fibre cartons.
See page 4963

ADJUSTABLE CAR.

A-B-C.



Adjustable to three sizes; fits any child between the ages of two to seven years.

Size A.
Wheels in 1st groove; both collars over seat.

Size B.
Wheels in 2nd groove; one collar over and one under seat.

Size C.
Wheels in 3rd groove; both collars under seat.

Made entirely of hard wood.

By making the car entirely of selected hard woods allows it to take an exceptionally fine glossy finish and makes the car practically indestructible. The seat, steering post, side pieces and tail piece are of natural finish. The wheels are made from a solid piece of selected birch and stained cherry red. The two collars are of beech, as is also the handle bar, stained same as wheels. Front fork is of hard maple.

Simple in adjustment. The two side pieces have three grooves in which the tail piece, bearing the two rear wheels, is fitted. When tail piece is in first groove, both collars on steering post are above the seat. This makes position A, or smallest size. For size B, place tail piece in second groove, one collar above seat and one collar below seat. Size C, tail piece in third groove, both collars below seat. To lock car in the desired position, put bolt through holes in steering post and screws in holes in side pieces.

Per Dozen

No. ABC—Adjustable Cars; weight per dozen, 70 lbs.....**$36.00**
Packed half dozen in a carton.

WIZZER BIKE.

Something to ride. As close an approach to a man's bicycle as he can get. Made of hard wood. A real play car propelled without sliding and wearing of shoes; in reality a safety tricycle for children of a wide range of ages.

Each

No. WB—Weight, 7 lbs......**$5.30**

The Toddler Toy combines the motion of a Kiddie Kar and the joys of going horseback besides. The Horsie-Toddler is a solidly made toy. Body and hindquarters are one piece of thick Arizona pine. Head and forelegs are of one piece also. Swivel bearing through shoulder allows toy to be steered in any direction. Four wheels having metal bushings throughout, giving great stability. Full shaped saddle. Finished in four colors. Four sizes, two of each size to a crate.

Per Dozen

No. 2—For ages 1 to 1½ years; height, 14½ inches; length, 19 inches; wheels, 4¼ inches.....**$32.00**

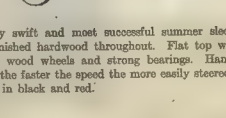
No. 5—For ages 5 to 7 years; height, 22 inches; length, 29 inches; wheels, 7 inches.....**56.00**

Two of a size in a fibre crate, partially assembled.

We do not break crates.

SELLNER.



A very swift and most successful summer sled. Built of smoothly finished hardwood throughout. Flat top with rounded edges; solid wood wheels and strong bearings. Hand brake on rear wheel; the faster the speed the more easily steered. Finished attractively in black and red.

Each

No. S—Sellner Coaster Car; length, 30 inches; width of top, 12 inches; width of steering bar, 18 inches; height over all, 5 inches; weight, 10 lbs.....**$2.50**

SAFETY POCKET AXES.

The handiest tool ever carried by a sportsman. They are large enough to fell a tree and small enough to carry in the pocket. A perfect axe for "blazing," clearing a trail, setting a tent, and is as necessary in the woods as a gun or knife. The nickel plated spring hinged guard is lined with lead and folds into the handle. The blade is made of tool steel, carefully tempered and sharpened. The metal handles are drop forged and will never break. Side plates are of rubber. The wooden handles are of selected hickory and have nickel plated guard and receiver.

Per Dozen

No. 5—Axe; solid steel blade; length, 11 inches; wgt., 16 oz **$29.40**

No. 6—Axe; solid steel blade; length, 12 inches; wgt., 22 oz. **33.60**

Per Dozen

No. 2—Axe; solid steel blade; length, 11 inches; wgt., 20 oz. **$50.40**

Per Dozen

No. 3—Axe; solid steel blade; length, 12 inches; wgt., 27 oz. **$58.80**

No. 2¼, has nail claw strong enough to pull a ten penny nail from a seasoned hemlock plank. Can get at and pull a nail with the blade and claw that cannot be removed with a hammer.

Per Dozen

No. 2¼—Axe; same as No. 2, but with claw..... **$54.60**

No. 2P, has a pick that can be securely and instantly locked either up or down. It will stand unlimited service and will be found handy when climbing, when folded the axe head can be used as a hammer.

Per Dozen.

No. 2P—Axe; same as No. 2, but with pick..... **$75.60**

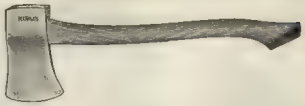
LEATHER AXE SHEATHS.

Per Dozen

No. 19—Axe Sheath; full length leather sheath..... **$20.00**

No. 20—Axe Sheath; half length leather sheath ... **15.00**

CAMP AND BELT AXES.



The blade is forged from solid tool steel. The tempered head, designed for driving stakes, spikes, etc., will not become battered even under continuous service. The accurately machined eye is fitted perfectly by the handle. The nail puller has tempered jaws. Has thoroughly seasoned selected hickory handle.

Per Dozen

No. 9—Belt Axe; 14 inch handle; weight, 22 ounces..... **$21.00**

No. 10—Camp Axes; blade, 3½x5¼ inches; 16 inch handle; weight each, 28 ounces..... **39.80**

HUNTING KNIVES.

WOOD CRAFT.

A knife entirely new in design, containing all of the essential features necessary for sticking, skinning, cutting up, cleaning, slicing, breaking bones, etc.

The four and one-half inch bevel blade is thick at back and tapers to the point. This allows it to serve the purpose of a thin blade and still possess more strength than is usually found in any but much heavier knives. Recommended and used by hunters of wide reputation and experience. Fully guaranteed.

Blade 4½ in.; handle 3⅝ in.; weight 5 oz.

Per Dozen

No. 49—Hunting Knife; leather handle; with sheath ... **$34.20**

No. 50—Hunting Knife; staghorn handle, with sheath.. **44.00**

DE WEESE.

Designed by Dall DeWeese, for use on expeditions after big game, where every item of the outfit has to be figured down to the lightest and most compact form possible.

It has a dull saw back on which the thumb is placed when skinning, or cutting hard substances. When sticking, the little finger should be doubled up, letting the end of handle rest against it. This takes the place of a hilt.

Per Dozen

No. 62—Hunting Knife, with sheath; blade, 4 inches; German stag handle 3¼ inches, weight, 3 ounces..... **$36.00**

EXPERT.

These knives were particularly designed to meet the requirements of the professional hunter, trapper and guide who requires a thin, keen edge for dressing skins and furs The back of the blade is designed for scraping skins while on the forms.

Cocobolo Handle, Staghorn Tip. Furnished with Sheath.

Per Dozen

No. 545—Hunting Knife; blade, 5 inches; weight, 3½ oz **$45.00**

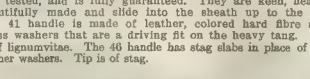
HUNTING KNIVES.

IDEAL.

On account of their quality, combination of several excellent features and beauty of design and finish, the Marble Ideal Knife has won a world-wide reputation. The blade is adapted to sticking and skinning. It is oval-ground at back of point for chopping bones and other hard substances.

Every knife is forged from razor steel, is hand tempered and tested, and is fully guaranteed. They are keen, heavy, beautifully made and slide into the sheath up to the tip. The 41 handle is made of leather, colored hard fibre and brass washers that are a driving fit on the heavy tang. Tip is of lignumvitae. The 46 handle has stag slabs in place of the leather washers. Tip is of stag.

LEATHER HANDLE.

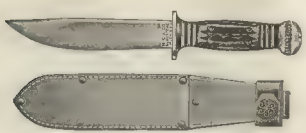


Per Dozen

No. 41-5—Hunting Knife; 5 inch blade; with sheath; weight each, 5 ounces $49.80

No. 41-6—Hunting Knife; 6 inch blade; with sheath; weight each, 6½ ounces 54.00

STAG HANDLE.



Per Dozen

No. 46-5—Hunting Knife; 5 inch blade; with sheath; weight each, 5 ounces $58.90

No. 46-6—Hunting Knife; 6 inch blade; with sheath; weight each, 6½ ounces 63.40

No. 46-7—Hunting Knife; 7 inch blade; with sheath; weight each, 8½ ounces 67.90

SAFETY.

They have a long blade with a short handle—utilizing the extension guard as a safety lock when the knife is open. The guard as well as blade is held in position by a spring, when either open or closed. The blades have bone chopper at back of point. The hilts—one on each side of the blade—and the bolsters and linings are of German silver. Side plates are of staghorn.

All parts are hand fitted with the utmost care, so that when knife is open it is as rigid as a one-piece knife.

Per Dozen

No. 83—Hunting Knife; blade, 4¼ inches; weight, 4 oz.; with sheath ..... Out

No. 85—Hunting Knife; blade, 5 inches; weight, 6 oz.; with sheath ..... Out

FOLDING FISH KNIFE.

Dotted lines show blade folded within folding handle.

The blade is made sharp at back of point for ripping and the back is an excellent fish scaler. It is a good all-round pocket knife for sportsmen, ranchmen and stockmen.

As shown by the dotted lines, the blade, when folded, is entirely protected by the unique, but simply constructed and operated German silver handle. When open it is as safe and rigid as a one-piece knife.

Per Dozen

No. 78—Fish Knife; 4-inch blade; weight, 3½ oz. $27.00

CLINCHER GAFF.

Controlled entirely by one hand—always ready. There's nothing to set—no steel trap feature—no danger. A spring holds jaws open. Just reach out—touch the fish—close your hand. Jaws of gaff shut with a flash and grip the fish like a vise. It will grip and hold any fish from ½ to 20 pounds. Fish cannot slip through no matter where it is gripped, for his circumference is considerably reduced. He cannot twist out because you can let your arm turn and he has nothing to twist against. The only humane gaff on the market. Leaves no ugly holes or tears. It is safe to use—no sharp points to accidentally snap and cut or tear.

Each

No. 321—Clincher Gaff; made of steel, heavily nickel plated: length, 18 inches; 7½ inches between points; can be locked with points together $1.50

TROUT NIPPERS.

Will fit the pocket, or hang over your shoulder on a rubber band; always ready for use. Controlled by one hand; can be closed instantly, cannot open until you release them. Trout is forced against projections in throat of nippers and is held securely while you thrust him tail first into basket as far as nippers will allow. No possible chance of losing your big trout.

Each

No. 332—Trout Nippers; heavily nickel plated, will resist rust; size when locked partly closed, 3x9 inches; spread, 5 inches; holds trout up to 2½ lbs.; weight, 4 oz. $1.50

THE SUBWAY, NEW YORK CITY

Two million barrels of Pennsylvania Cement (in round figures) were used in the construction of the New York and Brooklyn Subways. Over 90% of our production is used in construction that calls for the highest tests. Every bag and barrel of Pennsylvania, wherever bought for whatever purpose, is made to the same standard. Ask your dealer for Pennsylvania Cement. If he cannot supply you, write direct to Pennsylvania Cement Company, 30 East 42nd Street, New York.

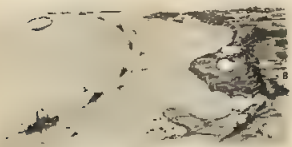
These Strategic Diagrams Lend A Novel and Convincing Touch to the Lobby Display on "Italy's Flaming Front" They Are Used in Conjunction with Photographs

REPRODUCTION OF STRATEGIC SKETCH DIAGRAM MADE DURING THE ACTION BY MILITARY OBSERVER

A- Observation balloon, the eyes of the artillery. Note fleet of planes to protect it from enemy planes and "spot" the shots. The destruction or interruption of this signal system would be the equivalent of blinding the gunners. HMS Italian 9.2 gun positions. CC Aerial cable ways often several miles long. E—Summit 361 Feasible, elevation 9,300 feet. (covered with eternal snows. The Italian hewed one tunnel 70,000 feet long through solid rock to secure uninterrupted communication. D Austrian base against which attack was directed.



REPRODUCTION OF STRATEGIC SKETCH DIAGRAM MADE IMMEDIATELY AFTER THE ACTION BY A MILITARY OBSERVER

AAA—Indicates captive balloons streaming on a great cable and serving heretofore as they come within range of their 12 and 15 inch guns. B Austrian stronghold mounting long range coast defense artillery. CCC Indicates destroyers and submarine destroyers which steam at wide curves around the battleships to protect them from enemy submarines. The speed of these craft is from 30 to 45 miles per hour. DD Italian floating gun carriages. These are large steam vessels mounting but one heavy gun. They are towed to their positions and anchored. EE Indicates Italian merchant vessels. These are known to be hovering about. The fleet's observation balloon will be seen to be hovering over the craft in order that it may be able to watch and direct the fire well out of range of the enemy's guns, but high enough to watch and direct the Italian fire.

REPRODUCTION OF THE STRATEGIC SKETCH DIAGRAM MADE THE DAY AFTER THE AIR FIGHT BY A MILITARY OBSERVER

A- Austrian battle plane rises from behind Austrian stronghold and climbs to about 18,000 feet proceeds to bomb fleet. B—One of the bombs explodes just a torpedo boat destroyer which is damaged and captured by the explosion. The boat was a four- destroyer which is damaged and captured by the explosion. The boat was a four- destroyer which is damaged and captured by the explosion. The boat was a four-

One Hundred Pounds in a Keg

Not an experiment. Has been sold under manufacturers name and guarantee for fifty years.

Farwell, Ozmun, Kirk & Co. *guarantee* every package of it to be a perfect axle lubricant.

The largest profit and the largest package for the price.

In 10, 15 and 25 pound lithographed metal pails.

For prices see page 4524.

HORSE HEAD.

A superior axle grease, made from pure animal and vegetable oils. Giving the maximum of lubrication in hot or cold weather. Put up in handsomely lithographed metal packages that attract attention and produce sales. Guaranteed by Farwell, Ozmun, Kirk & Co. to be a perfect axle lubricant.

In the following popular sizes:
1 pound boxes, 3 dozen in a case.
5 pound pails, 1 dozen in a case
7½ pound pails, 1 dozen in a case
10 pound pails, not crated.
15 pound pails, not crated.
25 pound pails, not crated.

The 3½ and 7½ pound pails contain ½ pound more grease than the ordinary packages that retail for 25 and 50 cents.

WEARWELL.

A very fine quality of axle grease composed of mineral oils. In four varieties, dark, light, mica and Dixons flake graphite. All packages, except barrels, attractively labeled. For use in hot or cold weather.

Put up in the following size metal packages.
1 pound boxes, 3 dozen in a case.
3 pound pails, 1 dozen in a case.
5 pound pails, 1 dozen in a case.
10 pound pails, ½ dozen in a case.
15 pound pails, not crated.
25 pound pails, not crated.
50 pound tubs, not crated

Also furnished in quarter, half and full barrels.

For prices see page 4524.

AutoStrop Safety Razor

Strops, Shaves, Cleans, Without Detaching Blade

You may sell this Razor on 30 days' Free Trial

All dealers are authorized to offer the AutoStrop Safety Razor to their customers on "Approval." Without paying anything, without depositing anything it may be tried for 30 days. Then paid for or returned.

The Company guarantees the Dealer against all losses

Razor sets which are returned will be exchanged for entirely new sets, and any razor not returned or not paid for will be replaced with a new razor.

STANDARD SET No. 1
BLUE—$5.00

The AutoStrop Safety Razor Co. assumes all the risk and provides for you a definite sales plan.

STANDARD SET No. 1

SHERATON DESIGN

SHERATON (Grey Finish)

The Sheraton takes its inspiration and its name from the artist who probably did more than any other to awaken the English-speaking world to the pure delight of graceful simplicity. The Sheraton is a masterpiece of artistic designing. It is simple yet exquisitely beautiful in outline and ornamentation.

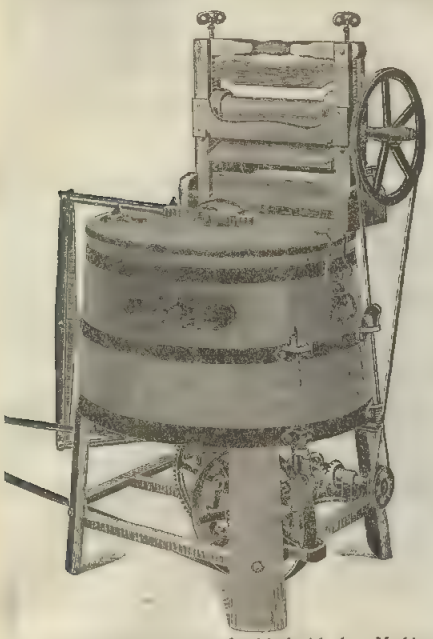
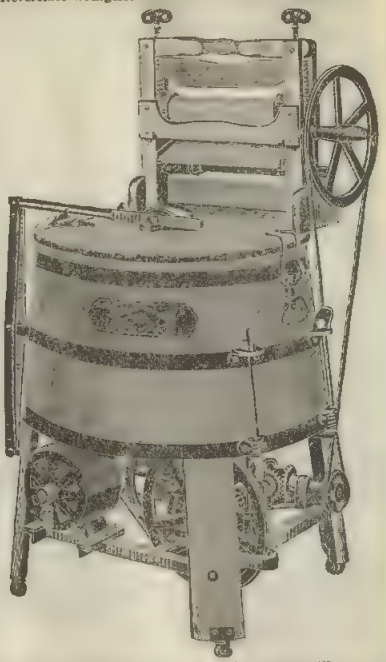
✠WASHING MACHINES

*NORLEIGH DIAMOND

Complete with Ball Bearing Reversible Wringers

NOTE -The only difference between these Machines and our No. 22 is that they are constructed to run by Mechanical Power instead of Hand Power and in addition are furnished with Ball Bearing Reversible Wringers. Material and Finish is exactly the same as the Hand Power Machine, also Dimensions of Tub.





WRINGERS—The Wringer furnished with these Machines is the Highest Grade manufactured; It is Ball Bearing, will operate in either direction by moving Gear Lever is fitted with the Very Best Quality "Five Year Rubber Rolls" and with proper care will last a lifetime. An extra large Drain Board is furnished for use when wringing from Blueing Water to top of Tub. Wringer will run at same time that the Washing Machine is in operation or Independently of it.

GASOLINE POWER

Especially adapted for Farms or other use where a Gasoline Engine is available, although it may be used with any other Mechanical Power, such as Steam or Electric.

The operation of this Machine is simple in the extreme, as there is nothing about it to get out of order. The large Belt Drive Wheel is located underneath the Tub. This does away with any possibility of the Operator's Skirts catching in Belt or Shafting. On account of being equipped with a Power driven Wringer, it relieves Washday of every particle of Work, of which the wringing has heretofore been the hardest part.

The Cost of Operation is so small that it can hardly be correctly estimated; Five cents will be more than enough to cover the cost of Gasoline consumed in turning out the heaviest Family Washing.

Each

✠**No. 60**—Complete as shown above but without Belt; Drive Pully 10x1¼ inches; requires belt 1¼ inches Wide. Should be run about 350 Revolutions per minute; Cost of operation about Five (5) cents per week. **$37 00**

One in a Crate, Weight Crated 150 lbs.

ELECTRIC POWER

With Self Contained Motor

Note—Very Important, Read Carefully—This Machine is regularly furnished with Alternating Current Motor, 110 Volt 60 Cycle, but can be supplied with Direct Current 110 Volt Motor at the same price. However, if any odd-cycle alternating current or higher voltage direct current motor other than the two specified above is wanted the cost will be slightly more and we can make a special quotation on receipt of information concerning voltage, current and cycles. It is always necessary to specify on orders for Electric Washing Machines the current, voltage, and cycles of the electric system on which the Washing Machine is to be run.

The Gearing together with the Motor is all placed underneath the Tub on a heavy Iron Bracket which also acts as a Brace for the Legs. The Motor is of ample strength to run either the Washing Machine alone or the Machine and Wringer at the same time if the Tub is not overloaded. It is the best Motor manufactured today for Washing Machines and is thoroughly dependable.

After connecting the extension Cord to any ordinary Electric Light Socket, the Agitator is started by turning to the right the Lever Handle nearest to the Motor on the side of the Tub. The Wringer is started in the same way by the Lever provided for the purpose.

Each

✠**No. 76** Complete, as shown above; Provided with Casters so that Machine may be easily moved about; Cost of operation about Two (2) cents per hour. **$82.00**

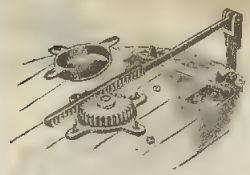
One in Crate, Weight Crated 350 lbs.

Items Marked ✠ Not Carried in Stock; Can Only be Furnished by Shipping Direct from Factory, F. O. B. Chicago, Ills.

WASHING MACHINES

★NORLEIGH DIAMOND

BALL BEARING — HIGH SPEED



Cut shows View of the Gear and Rack which operates the Agitator

Cut shows Agitator and inside of Tub with Corrugated Surface

Every Norleigh Diamond No. 22 High Speed Washing Machine is Guaranteed against Defects in Material and Workmanship for a period of Five (5) Years. Repair Parts can be furnished at all times.

Details of Mechanical Construction.

Mechanical Principle—The Novel Mechanical Principal of Construction, that is the Double Lever with Walking Beam Connection, not only equalize the Power, but give greater Speed to the Agitator than any other High Speed Washing Machine.

Ball Bearing—The Ball Bearing used is Simple, set up in Vaseline, so that it will not need Oiling for years and is without question the easiest running Bearing used on a Washing Machine. It is simple and cannot get out of order.

Balance Wheel—Extra Heavy; this part of the mechanism actually takes off the major portion Muscle Power required to operate the Old Style, low speed Washer.

Castings—All Castings made of Best Quality Steel, and every Metal Part of the Machine is not only carefully made and Extra Heavy and Strong, but is finished with the Electro Galvanizing or Sherardizing Process. This Finish does not Peel or Check as Paint will do and effectually prevents Rust.

Details of Tub Construction.

Tub—Tub made of Best Quality Selected Southern Cypress. Inside Corrugations. Cypress will last longer and give better satisfaction in a Washing Machine than any other wood. The Tub is finished nicely in Natural Wood Finish with a Good Quality of Varnish and is very Strong in construction, the Stave Legs being well braced to prevent leakage.

All Gears are underneath the Tub where they are entirely out of the way; no danger of Catching or Tearing Clothing.

On account of the Special Ball Bearing, together with the Double Lever and Walking Beam Construction, this Washing Machine actually does run easier when loaded than any other High Speed Washer. It not only washes Clothes Clean, but on account of the easy running qualities, together with High Speed, any Housewife can get her washing finished much quicker and with less effort than with other Machines.

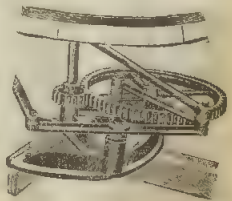
No. 22—Inside Dimensions—Diameter at Bottom 23 inches, at Top 20 inches; Depth 12¾ inches; Height to Top of Tub 28½ inches; Height Over All 44½ inches; Length of Wringer Board 15½ inches; Tub Made of Best Quality Cypress, Natural Finish and Varnished. Inside Corrugated, Giving a Perfect Rubbing Surface; All Metal Parts Electro Galvanized Finish, Legs Securely Bolted to Body and Strengthened by Heavy Cross Braces..... Each **$18.00**

One in Crate; Weight Crated 100 lbs.

Cut shows under View of Tub; also Gearing, Balance Wheel and Propelling Levers. Note the Heavy Frame, Method of Cross Bracing and Bolting.

Note—This Machine can be operated either in a sitting or standing position. Operating Handle is provided at lower end with a Metal Stirrup so that both Hand and Foot Power may be applied.

This Cut shows a Sectional View of the Ball Bearing Feature. The Balls of Extremely Hard Steel and Made Perfect in such a manner that all Friction is practically eliminated.



This Cut shows the "Power Plant" of the Machine. It gives a good view of the Gearing Levers and Walking Beam. The Ball Bearing is enclosed in the Frame at end of Main shaft on which the Small Pinion is secured.

Little Hardware Shopping Adventures

By FRANK FARRINGTON

Seeing About a Saw

I HEARD a great pounding in the garage and went in to see what was going on. The small boy of the family was at the work bench.

"What's going on here?" I asked.

"Making a boat," was the reply. "Can't you help me? I want to cut off these pieces for the bottom."

The work had not progressed far enough so that it was very plain just what kind of a boat it was to be, but as long as the boy knew, that was enough, I suppose. I took the pieces he wanted cut and experimented with a knife and with everything else available, but plainly the job called for a saw, and a saw was just what we did not have. I put the boy off and told him I would bring home a saw at night and we would finish the boat.

A little persuasion carried the day and when I went downtown it was with the thought in mind that I must buy a saw that day, whether I did anything else or not. You know how it is when you make a promise to one of these little folks. You might break a promise to the bank, but not to the kiddies.

I went into a hardware store right where I got off from the car. I say I went in. In reality I sort of fell in, because they had one of those spring screen doors with a spring so stiff that it was all I could do to pull it open far enough to get through, and then the thing turned and shoved me on in with a force that nearly projected me into the arms of a woman about to make a try at getting out. I believe there is such a thing as too much spring on a screen door.

A young woman stood behind the counter. That appealed to me because I thought, "Here is a store that has sent its men to war and replaced them with girls."

"Good morning," I said. "Can you show me some saws?"

"There'll be a salesman here in a minute," said the lady haughtily. I saw that I had made a mistake about the patriotism of the store and that I had unwittingly insulted the cashier or the manager's wife or something. I apologized and sat down on a stool and tried to see saws somewhere around the room. After waiting ten minutes, and you know that seems like half an hour under such circumstances, I did catch sight of some saws and I went over to look at them.

OUT of the corner of my eye I could see that the lady on the watch was taking no chances, but followed me with her keen glance. I didn't dare touch the saws when I got to them. I wished for a side door near the saw case. I did not wish in vain, for I discovered one opening on a side street, and without waiting to ask permission, I escaped.

It was with a sigh of relief that I left the vicinity of that store. I felt no inclination to return, even when I looked back and noticed that one window contained a very elaborate display of saws.

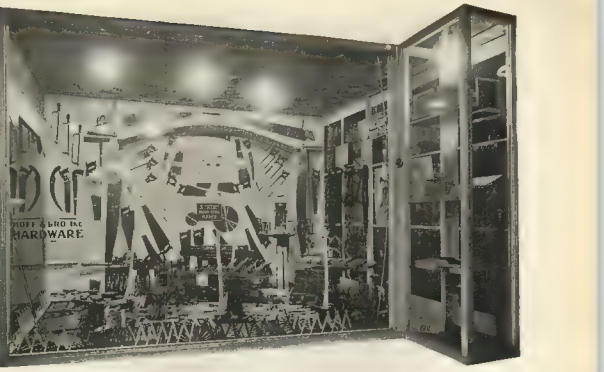
I knew where there was another hardware store, and I made for it. I smiled to myself when I reached it and saw in the window a sign, "Every thing in Saws." A benevolent appearing old gentleman with spectacles was seated just back of the window in a chair which bore the marks of age and the whittler's knife. When I entered he leaned forward in his chair in an interested way and bade me good morning. I good-morninged back, and asked to see some saws.

"Yes, sir; what kind of a saw?" he asked, arising and standing there as if awaiting explicit information.

"Well, I don't know just what kind of a saw you'd call it, but I guess a kind of family saw; something to use around the place when you want to saw something."

He started back through the store, saying, "I'm afraid we haven't got just the saw you want. Could you use a mitre-box saw?"

Display of saws which suggests a complete and varied stock. In the foreground a miniature battleship has been contrived by the utilization of a band saw



Saw window by Hoff & Bro., Reading, Pa. This picture was taken at night, but every object is plainly revealed by the good lighting above

I didn't know anything about that and I told him so. He showed me one of them and I saw that it wouldn't do for my purpose. He showed me big saws, rip saws, buck saws, hack saws, meat saws, little saws, saws five feet or so in length. He seemed to be trying to live up to the sign that said everything in saws, but he couldn't produce a saw that fitted my need. He was all out of common, ordinary, plain saws, such as a man would want in helping the kiddie build a boat. I tried to get away quickly when I discovered this fact, but in spite of anything I could do, it took me a quarter of an hour to complete my visit.

The man didn't try to sell me any of his specialty saws, but he insisted upon showing them. I have come to the conclusion since that, although he was kind of a fussy old fogy, still he may have had some method in his operations, because I haven't been able to get his collection of saws out of my mind, and I have to admit that if I wanted any kind of a freak saw I would probably go right back there for it—but if I wanted a common saw, just the ordinary family variety, I would go elsewhere. That store and the man in it lacked in salesmanship and it lacked in pep, and it was fatally short in stock, but it did have something. It had the determination to show what it had and to impress it upon the visitor's mind.

I WAS still sawless and I couldn't spend the whole forenoon making friendly or unfriendly visits at hardware stores. I gave it up until after luncheon. When I went down in the elevator at lunch time I asked the elevator boy if he knew of a good hardware store nearby besides the ones I had called on. "Sure," he said. "There's Ogilvie's Hardware, corner Third and Spring." I had forgotten Ogilvie's and I hastened that way after lunch.

From half a block away I could see the sign, "OGILVIE'S," and right below the name was the word "Tools" in smaller letters. That was what I was after. A saw is a tool

Ogilvie's is such a big, busy place that I didn't expect to get very careful attention, but I guess there is some reason for its being big and busy.

Here again I was met by a girl, but this time it was not one of the haughty kind. She was short and freckled and homely, but she was businesslike, and she was there to wait on customers, not merely for them to look at while they waited. I told her I wanted to get a common handsaw, just one to use around the house for odd jobs. She smiled as she led me away, and I went on to say that I was going to help the kiddie build a boat

"We've got just the kind of a saw you want. I know, because we fuss with such things up at my house, and father is always tinkering in the barn."

I knew I had come to the right place and found the right clerk, because that "tinkering in the barn" described the kind of operations for which you need such a saw as I wanted. They had more space devoted to saws than any of the other stores, and they had something I don't believe you ever saw in any other hardware store. They had a work bench and some odd pieces of lumber, and she gave me a chance to try the saw she showed me. What do you think of that? She not only told me the saw was what I wanted, she gave me the evidence of my own experience with it. As soon as I saw that work bench I was sold on that store's methods. I asked about it

"Yes," she said, "that bench is arranged just so people can try the tools. If you want to drive a nail with a hammer to see how it hangs, or if you want to try out a plane, or anything else, you can do it right here. You don't have to take tools home and use them before you know whether they are what you want or not. It's an idea of Mr. Ogilvie's. He's a wonderful man about managing a store. He's just full of ideas like that. Of course, we sell those work benches, and it gives us a chance to demonstrate the benches as well as the tools. You see, that bench comes knocked down. We have them in six different lengths, and we can even make one

In this window the most conspicuous card made clever use of the fact that the saws on display are appearing in a current vaudeville act

into a special length where a man has a space just so long where he wants to use one. What kind of a bench do you have?"

I HAD to admit that our work bench was just an old kitchen table.

"Do you mind my saying," she asked, "that I believe it would be worth many times the price of the bench for you to have one of these and a few good tools so your boy will learn how to use them right and how to take care of them? Every boy ought to know how to handle common tools, and it ought to be a part of his education to learn to take care of his things. You see, there is a rack goes right back of the bench, and it's a part of it, and that gives a place to put everything you use regularly, and there's a drawer underneath for many things."

But why go on? I wanted my boy to be handy with tools. I wanted him to learn to put things back where he found them. I wanted him to learn the rule of a place for everything and everything in its place. I ordered one of those benches, and made my plans to give the boy new tools, one at a time, on a basis of rewards of merit, birthday presents, etc.

If I were to tell my wife about the girl selling me the bench, she would insist that the girl was pretty and had hypnotized me. I know that she was terribly homely, but terribly efficient, and if she hypnotized me it was the hypnotism of good salesmanship rather than superior will power.

Anyway, we now have a good work bench, and everything has to be kept shipshape or I insist upon knowing the reason why. And I go back to Ogilvie's when I want more tools, and incidentally, I am quite likely to go back there when I want anything in the hardware line.

SINGLE BIT AXES

*BLACK PRINCE

Black Prince Axes are Hand Hammered, Hand Tempered and Hand Whetted. The Bits are made of Highest Grade Crucible Steel Drawn Thin and Tempered Hard to Hold a Fine Cutting Edge. Soft Steel Body, with **Eye Punched** from Solid Steel (not Welded); the Eye Tapers from Outer to Inner Opening; this Holds the Handle Firmly and Prevents its Splitting.

In Ordering Axes on this Page, Give Numbers and Weights Only

Blowers

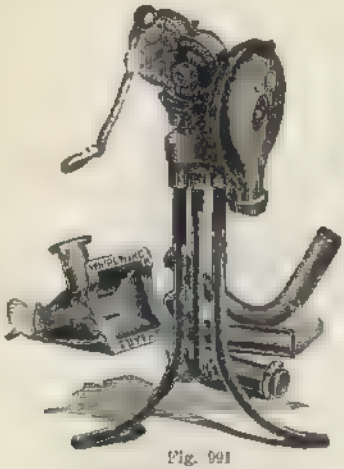

Fig. 991

The Famous 400 Champion Steel Blacksmith Blower

Made with Adjustable Ball Bearings Only

The general construction of the No. 400 blower head used in connection with the above blowers and forges is the finest and highest grade that can be secured by the use of [illegible] tool steel. It is supplied with high speed spiral gearing and adjustable ball bearings made of the finest grade tool steel.

The 400 Champion Steel Blacksmith Blower with the No. 400 Champion Whirlwind Blast with Tinker Heavy Nest Tuyere Iron, fan 12 inches in diameter complete with piping; blower weight, 100 pounds; tuyere iron, 60 pounds ..... each $37 00

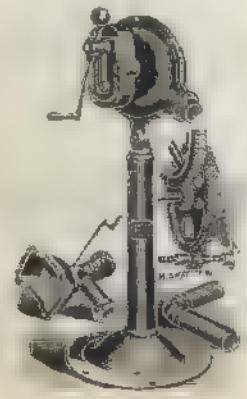
No. 40 Fig. 992

The Champion Lancaster Geared Agricultural Blowers and Forges

No. 40 Champion Lancaster Geared Blower is a well-built, cheap, direct-driven blacksmith blower which has been built to meet the demand for a cheaper blacksmith blower than the famous 400 [illegible] High Speed Spiral Geared Blower or the No. 70 Midway Spiral-Geared Blower.

This blower, as will be seen by illustration, is supplied with the Champion Adjustable Nozzle Tuyere Iron. It is smooth-running crank turns either way to make the blast, and goes out with our recommendation.

No. 4 Champion Lancaster Geared Direct Drive Blacksmith Blower with fan 12 inches in diameter, tuyere iron and piping complete; weight, 110 pounds ..... each $20 00



No. 70 Fig. 993

The Champion Midway Spiral Geared Blacksmith Blower

No. 70 Champion Midway Spiral Geared Blacksmith Blower is built with Midway Cut Cross Spiral gearing and ball bearings, driving the blacksmith blower. The Champion Midway Spiral Gearing is adaptable to cross-section and will last a lifetime under ordinary conditions and practices. The gearing runs in a dust-proof casing, the crank turns in either direction to make the blast.

No. 70 Champion Midway Spiral Geared Blacksmith Blower fan 12 inches in diameter, supplied with 50 pounds capacity best ball tuyere iron, blower and piping weight 115 pounds; tuyere iron, 50 pounds ..... each $30 00

No. 71 Champion Midway Spiral Geared Blacksmith Forge with cast iron hearth and hood 30x30 inches, 2x45 tuyere and heavy best tuyere iron, height, 3 inches, fan, 12 inches in diameter, without water tank, weight 300 pounds ..... each $50 00

With water tank, weight 340 pounds. ..... each $5 00

Blowers

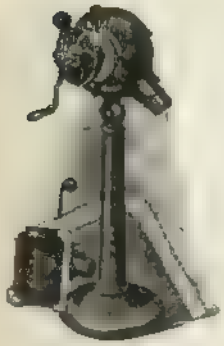


Fig. 994

Royal Blower

The successful blower. Crank turns forward or backward. Noiseless and easy to operate.

Blower, 12 inches; weight, 135 pounds; height, 47 inches.

Gear case is oil-tight and dustproof. Gears run in a continuous bath of oil. Gears are flat and straight cut, made of special material. No spiral or worm gears. A powerful blast. Heating after blast. Fire pot is 9½ inches, inside.

List price, complete, as shown	$28 00
List price, without tuyere	24 50
List price, without hood, stand and tuyere	17 50

No. 2E Electric Blower

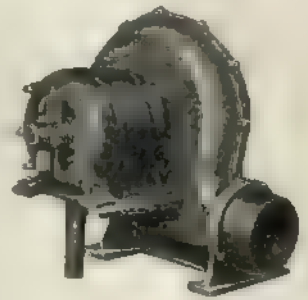

Fig. 995

Height 15 inches; net weight 60 pounds; diameter of outlet, 4¾ inches. No. of forge fires, 1 to 3.

A well-built blower with powerful, constant speed induction type, motor with capacity to handle from one to three forge fires. Fully guaranteed. When ordering electric driven forges or blowers, furnish us with the following information:

1. Whether current is alternating or direct.

2. If alternating current, give cycles and whether 110 or 220 V. Our standard motors are designed for 60 cycles. If direct current, voltage is all that is required.

List price . . . $75 00

Canedy-Otto No. 5E Electric Blower

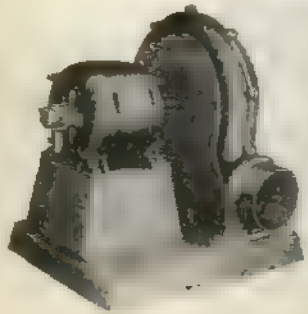

Fig. 996

Height, 15 inches; diameter of outlet, 5¼ inches; weight, 20 pounds; diameter of outlet, 4¾ inches; number of forge fires, 5.

The No. 5-E Electric Blower is equipped with a high-grade, constant speed, induction type motor, capable of handling from one to five forge fires. It is mounted on a substantial pressed steel base with turned, handsome appearance and a high-class machine in every particular. Fully guaranteed built for service.

When ordering electric-driven forges or blowers, furnish us with the following information:

1—Whether current is alternating or direct.

2—If alternating current, find out cycles or alternations, and state whether 110 or 220 volts.

3—Our standard motors are designed for 60 cycles, or 7,200 alternations.

4—If direct current, the voltage is all the information needed.

List price $96 00

Blowers

The Champion Variable Speed Electric Steel Pressure Blacksmith Blower

The Blower with the Big Motor

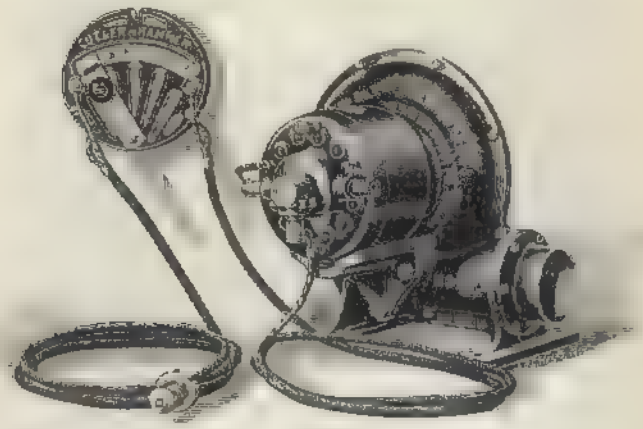

Fig. 807

No. 50 for Regular Blacksmith Fire with Universal Motor, Steel Pressure Fan Case and Detached Rheostat

No. 50 Champion Electric Blower is designed to meet the requirements for blacksmith heating purposes from the smallest up to 4 inch pipe motor. The operator of the blast is given by means of different changes of speed secured by a series of, three notches and lever on the detached rheostat.

No. 50 Champion One-fire Variable Speed Electric Blacksmith Blower is furnished with a Universal Motor wound for both alternating and direct current, either 110 or 220 volts.

The motor has a [illegible] Motor is built with a hammered steel shaft, phosphor bronze bearings self-aligning, and is provided with a worm and worm gear of the highest grade cut steel, and is covered wire of the best insulation.

Is furnished with attaching cord and plug to fit any light socket, therefore requires no electrical expense to connect the blower up to the current.

Before ordering, ask your electric current plant for the voltage only.

No. 50 Champion One-fire Variable Speed Electric Steel Pressure Blacksmith Blower with Universal Motor, for both direct and alternating current, either 110 or 220 volts, with detached rheostat for variable speed, with attachment cord and plug to fit any light socket, therefore requires no electrical expense, and steel pressure fan case for all kinds of general blacksmith work. Weight, 55 lbs. $40 00

No. 51 Champion One-fire Variable Speed Electric Blacksmith Blower with Universal Motor, for both direct and alternating current, either 110 or 220 volts, with detached rheostat for variable speeds for extra heavy fire. Weight, 60 pounds [illegible] $60 00

CURTIS GARAGE AIR COMPRESSORS

"CURTIS AIR—FREE FROM OIL."

PURE AIR for your customer means good service, because oil ruins tires, and AIR FREE FROM OIL means fewer blowouts—fewer punctures—greater tire mileage—less repairs; saves them many dollars up-keep every month.

A Few Curtis Exclusive Features

1—Controlled-splash self-oiling system. No excess oil in cylinder, no external leakage nor waste of oil, no oil gets into the tires. Enclosed crankcase keeps out dust.
2—Uses about one-tenth of the oil used by any competing machine; saving in oil alone soon pays price of machine.
3—High and low level oil filling gauge, so you can tell at a glance the amount of oil in the crankcase.
4—Fan flywheel cools cylinder; increases capacity.
5—Inspectable valves, light weight; large area.
6—Valves cannot drop into cylinder and wreck machine.
7—Hand unloader permits starting compressor against full tank pressure without burning out motor, blowing fuses or burning or jumping of belt.
8—Drop forged crankshaft. Adjustable, renewable, non-cutting die cast bearings.
9—Head removable without breaking or bending any pipe connection or pipe fittings; only one gasket.

1 No. 82 ⅜-inch Needle Valve with swivel hose connection	2.10
2 Specially Ground Brass Unions, ½ and ⅜-inch	1.85
1 Automatic Tire Connection	1.50
1 25-foot Drop Line ⅜-inch Resistoil Air Hose	4.50
	$231.50

MOTOR DRIVEN.

The compressor has a capacity of 2½ cubic feet of free air per minute, has an adjustable safety valve on each cylinder and is driven by a ½ H. P. motor, by a no close cloth pinion gear. The motor will readily start the compressor against 130 lbs. and drive it up to 175 lbs.

Makes a most convenient installation when used in connection with our Model "M" Automatic Controller. Operation from lighting circuit if desirable.

Height, 16½ inches. Floor space, 18½x11 inches. Net weight, 140 lbs. Shipping weight, 170 lbs.

	Each
No. 42—Compressor; with 110-220 V. 60 cycle A. C. 1 phase motor	$170.00
No. 42—Compressor; with 110-220 V. 25 cycle 1 phase A. C motor	190.00

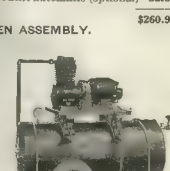
	$260.95

MOTOR DRIVEN ASSEMBLY.



The compressor is the standard No. 102 with capacity of 2½ cubic feet free air per minute direct geared to ½ H. P. motor.

The cloth driven pinion is employed with cut cast iron spur gear. The power plant is mounted on a substantial iron base which surmounts a 32-gallon Brunner air tank recommended for 150 lbs. working pressure. Construction is entirely of metal, there being no wooden parts which might warp or crack and throw the power plant out of alignment. Equipment as illustrated is furnished and this machine is ready for use when uncrated. Hose may be attached to fittings as shown or pipe line may be extended to any part of the building. In connection with automatic controller, this machine is recommended for garages housing up to 50 cars.

Height, 24 inches. Floor space, 18x36 inches. Net weight, 310 lbs. Shipping weight, 385 lbs.

	Each

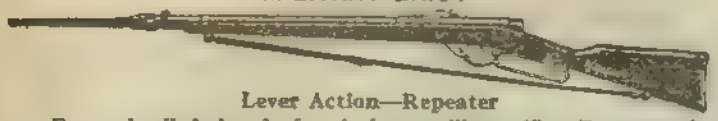
AIR RIFLES

MILITARY DAISY



Lever Action—Repeater

Every detail designed after the latest military rifle a Repeater; has all the hard-hitting, accurate Daisy qualities—just the gun for drill as well as for target shooting.

While this Air Rifle shoots strong and accurately, it avoids the danger of ordinary fire-arms. The detachable bayonet is rubber tipped so as to render it harmless.

This rifle is a 50-shot repeater and has a forced feed so that it can be fired in any direction without losing a shot.

Like all Daisies, this military type is as carefully designed, made, and finished as a man's rifle. It has a beautiful Walnut finished stock. All metal parts are finished in gun blue. The rear sights are open and adjustable. The front sight is of the knife type. The rifle comes complete with sling and swivel.

Per Dozen

No. 40—Shoots Air Rifle Shot only; Weight 3¾ lbs.; Length Over All 45 inches..... **$66 00**

Left Barrel Full Choke, Right Barrel Modified

SHOT PATTERNS

In a 12 gauge gun, using 1⅛ ounces No. 8 Chilled Shot, 399 pellets per ounce, there would be 449 pellets in the load In a 30 inch circle at 40 yards the pattern would be as follows

Cylinder Bore.....170 to 190 pellets
Modified.....250 to 275 pellets
Full Choke .....310 to 320 pellets

The 16 and 20 gauge guns will make proportionate patterns.

For brush shooting, the cylinder bore is desirable, and for short range field work, the modified choke. For wild fowl and trap shooting, the full choke is the most effective, as it affords greater velocity and penetration, and increasing the killing range.

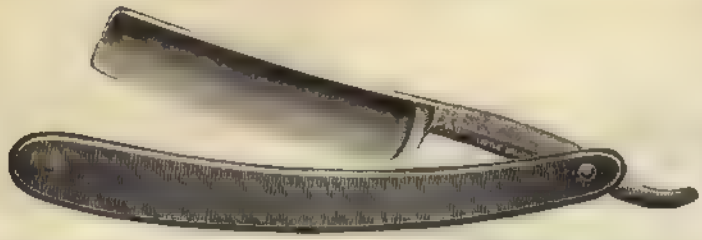
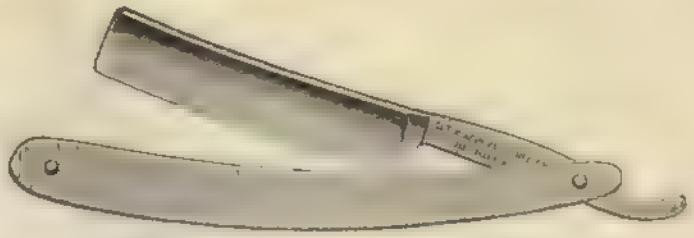
FINE HIGH GRADE RAZORS

Manufactured and Fully Guaranteed by The Geo. W. Korn Razor Mfg. Co. (World's Celebrated Manufacturers of High Grade Razors), Little Valley, N. Y. Best Quality Steel Blades. Well Constructed. Very Durable and Highly Polished.

Illustrations are Reduced Size. **Prices Each.**

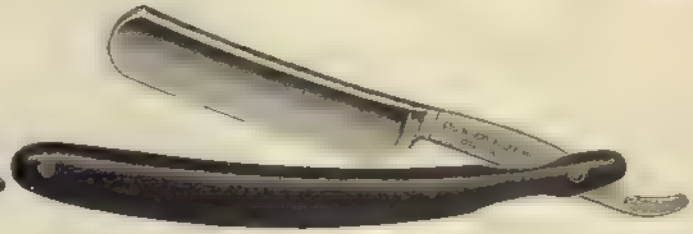


This razor is finely ground and has a glazed finish. The blade is fitted with a flat back rubber handle. For a razor at a medium price this one is unsurpassed.
No. 1051 Each..... $3 15



This razor is one which will appeal to most everyone. The blade is finely ground and has a full mirror finish. The handle is flat black celluloid and will not warp or break.
No 1411 Each..... $3 25

This razor is made for the man of moderate taste. It has a finely ground blade with an excellent glazed finish. It is fitted with a celluloid handle representing tortoise shell. A staple article and a good seller.
No 1013 Each..... $3 35



For men who desire a round point razor we recommend this one. It has a well ground blade with oval tang. The gump on both the upper and under sides of the tang prevents the razor from slipping in the fingers. The handle is black oval rubber with patent fit-the-finger indents. It is one of the most convenient razors to use that we offer.
No 1005 Each..... $3 80

Every man can be proud to possess such a razor and it would make a [illegible] This blade is full mirror polished and has an oval tang with both upper and under gimps. The handle is of golden shell and will not warp or break.
No. 1432 Each..... $4.00

For beauty and quality this razor is unsurpassed. It is made from the very best quality [illegible] The blade is fitted with a [illegible] handle.
No 1000 Each..... $4.25

Extra full [illegible] razor. The blade has a fine glazed finish and is fitted with an ivoroid handle. An excellent razor in every respect.
No. 1150 Each..... $4 50

The man who buys this razor orders his razor troubles. It is made [illegible] built on its excellent quality. The blade is extra-full [illegible] has a beautiful glazed finish. It is fitted with a [illegible] handle which is very popular. The big sale of this razor allows us to name a price unusually low for a razor of this quality.
No. 1151 [illegible] $4 75

This razor is one of the finest ground and best finished razors that we offer. It is extra-full concaved and has a beautiful blue glazed finish far surpassing any other glazed finish. The tang is oval and has two small straps on each side which greatly improves the appearance to the razor. The handle is oval rubber.
No. 7004 Each..... $5.00

This razor is a novelty to the buyer of high class merchandise. Its [illegible] to the person desiring to make an out of the ordinary present and its excellent shaving qualities are appreciated by the user.
The blade is finely ground and has a beautiful mirror polish finish. The tang is covered with tortoise shell celluloid which not only prevents the tang from rusting but adds greatly to its appearance. The handle matches the tang.
No. 6467 Each..... $5 50

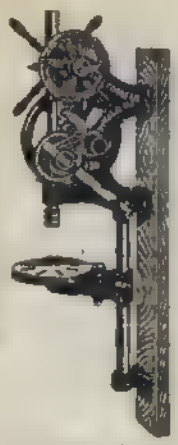
HAND AND POWER POST DRILLS

BUFFALO



Fitted with "Suregrip" Chuck

Opened or closed by half a turn

Spindle bored for ½ inch Straight shank Drills

Drills 1¼ inch hole to center of 16 inch circle

Run of feed 5½ inches

Run of table 14 inches

This drill embodies the convenient and powerful capstan lever principle for fast boring, reaming and drilling of small and medium size holes. Change to automatic feed or back is obtained in a second by the sliding collar at right of the planetary feed gears.

The shafts and spindles are of polished steel and the bearings bored and reamed in the solid metal of the frame. Carefully fitted gears insure easy, smooth operation without noise or lost motion. The finest radial ball bearings between feed screw and drill spindle relieve 90% of the friction at this vital point. Change of speed obtained by changing crank from front to rear gear or back—fast speed for light work, and slow speed for heavy work.

The table is easily adjusted up or down on shaft, and can also be swung to side

For Hand

No. 130—Without pulleys, weight 140 lbs. .....Each $20 00

For Hand and Power

No. 130A—With 6x2¼ inch, tight and loose pulleys, weight 155 lbs...Each $23 00

Drills 1¼ inch hole to center of 18 inch circle

Run of feed 3½ inches

Run of table 14½ inches

Diam. of Drill Spindle 1¾ inches

Bored to take ½ inch Straight Shank Drills

Furnished on Special order for 41/64 or ⅝ inch Drills

Length over all 46 inches

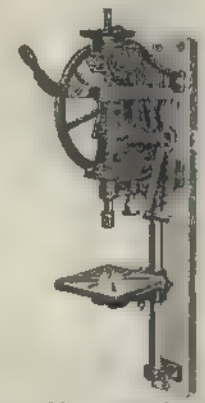
Adjustable table is quickly and easily adjusted to any point of run, the gears mesh perfectly. Shafts and spindles are of steel and run in long journal bearings bored and reamed in the solid metal of the frame. The end thrust of the swiftly revolving drill spindle is balanced on ball bearings. Two speeds, two feeds.

For Hand

No. 98—Without pulleys, weight 160 lbs. Each $25 00

For Hand and Power

No. 98A—With 6 inch tight and loose pulleys, weight 175 lbs. .....Each $29 00



Gears are machine cut and mesh perfectly. Shafts and spindles of polished steel and run in long journal bearings, bored and reamed in the solid metal of the frame

Buffalo ball bearings at end thrust of all swiftly revolving parts. Two speeds; to change speed, shift the collar

Two feeds, automatic and lever, with instant, automatic return of drill spindle Equipped with the "Buffalo Suregrip" chuck.

Wheel holding attachment furnished with each drill. Drills 1½ inch hole to center of 18 inch circle. Run of feed 4½ inches. Run of table 18 inches. Length over all 62 inches Spindle bored for ½ inch straight shank bits. Furnished on special order for 41/64 or ⅝ inch bits.

For Hand

No. 96—Without pulleys, weight 245 lbs. Each $30 00

For Hand and Power

No. 96A—With 8 inch tight and loose pulleys, weight 265 lbs. .....Each $34.00

Large capacity. All shafts and spindles are of steel, cut gears, two speeds, two feeds, ball bearings at end thrust of feed screw, "Suregrip" chuck.

Drills up to 1½ in. hole to center of 22 in. circle. Run of feed 6¼ in. run of table 21 in. bored to take ½ in. straight shank bits. Can be furnished on special order for 41/64 or ⅝ in. bits. Length over all 66 in. Wheel-holding attachment furnished with each drill. Diameter of pulleys 8 in.

For Hand

No. 93—Without pulleys, weight 375 lbs. Each $36 00

For Hand and Power

No. 93A—With 8x3 inch tight and loose pulleys, weight 395 lbs.....Each $40.00

Drills 1½ in hole to center of 21 in. circle. Run of feed 4½ in., run of table 21 in., diameter of drill spindle 1¼ in.; bored to take ½ in. straight shank bits. Can be furnished on special order bored for 41/64 or ⅝ in. bits Length over all 82 in. Wheel holding attachment furnished with each drill

The fly-wheel speed is independent of the spindle, giving full momentum where most needed—on slow, heavy work, where most other drills fail. Adjustable rack, machine cut gears, shafts and spindles are steel, two speeds two feeds, ball bearing

For Hand

No. 94—Without pulleys, weight 260 lbs. Each $40 00

For Hand and Power

No. 94A—With 8x3 inch tight and loose pulleys, weight 280 lbs. .....Each $44 00

Fitted with "Suregrip" chuck. Two speeds of spindle. Automatic feed adjustable to four speeds Quick return of spindle. No turning back of feed wheel after drilling.

Drills 1½ inch hole to center of 24 inch circle. Run of feed 7½ inches. Run of table 20 inches. Spindle bored for ½ in. straight shank drills.

Furnished on special order for 41 64 in. or No. 2 Taper without charge.

Multi-Compound Lever Feed. A 1 inch hole can be drilled with this lever. This feature is obtained by the quick-speed head operated by the four-arm lever. By maintaining a light pressure on the latter, the bit is forced through the metal with maximum speed. One sliding collar is arranged at feed head for changing from lever to automatic feed or back. The other is at lower end of flywheel shaft, for change from slow to fast speed, or back. Length, over all, 72 inches

For Hand

No. 124—Without pulleys, weight 370 lbs .....Each $47 00

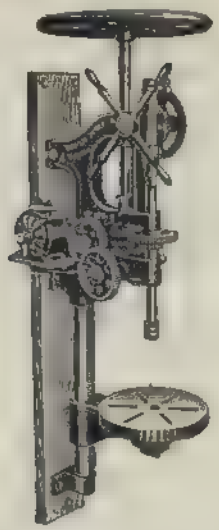
For Hand and Power

No. 124A—With tight and loose pulleys, 8x3 in., weight 390 lbs.....Each $51.00

One in a Crate

HAND AND POWER POST DRILLS

BUFFALO ELECTRIC



All gears are machine cut and fitted with accuracy, resulting in smooth, noiseless operation. The spindle is raised or lowered in an instant by means of the four-arm lever, which effects a great saving of time in boring wood, reaming and drilling holes. A 1 in hole can be drilled with this lever. For larger holes, the finest automatic feed will be found more satisfactory

Fitted with "Suregrip" chuck which locks or releases the bit by turning it half way round by hand

The table is fitted on rack, so that it may be conveniently raised or lowered. Gear-guard and wheel holder furnished with each drill

Chuck is bored for bits with ½ inch straight shank. On special order, also furnished for 41/64 or 5/8 inch without extra charge. Run of feed, 8 inch. Run of table, 20 inch. Drills to center of 24 inch circle. Height, 72 inch.

Alternating Current .....Each 121.00

One in a Crate

NOTE—In ordering, give full information regarding current, voltage, etc.

SILVER'S
Double Geared
Self-Feed

With ball bearings, fast or slow speed. A high-grade drill in every respect. Neatly finished and machined.

The intermediate gear eliminates the necessity of turning crank reverse direction on slow speed. Table moves up or down, or to either side. The automatic feeding device, located back of spindle, gives nearly a continuous feed. Feed can be regulated by thumb screw. Frame is neat and solid, cast in one piece. All bearings ground from the solid metal to working fit. Gears are machine molded and of perfect mesh. Spindle and shafts are of steel

Dimensions: Size of spindle, 1⅛ inches; run of spindle, 4 inches; size of column, 2 inches; greatest distance of spindle to table, 16 inches; spindle turns 1½ times to 1 turn of crank on fast speed; crank turns 1⅛ times to 1 turn of spindle on slow speed; drills to center of 18 inch circle and up to 1½ in. holes. Spindle bored for ½ in. round shank drills, unless otherwise ordered. Total height 50 inches

For Hand Power

No. 23—Weight 170 lbs..... . Each $16.00

One in a Crate

Double Geared

Self-Feed

This drill is precisely the same as No. 23, only fitted with tight and loose pulleys, making it a power machine.

The tight and loose pulleys measure 8x2½ inches and should be speeded about 250 revolutions, which will turn the spindle 170

For Hand or Belt Power

No. 23P—Weight 185 lbs.....Each $20.00

One in a Crate

SILVER'S
Double Geared
Self-Feed

A strong, rapid and complete drill with hand or continuous automatic feed. It has a neat and attractive finish and will do perfect work within its range.

Dimensions: Floor space over all 10x16 in Has extension crank and adjustable feed.

Drills 0 to 1 inch holes, and to center of 14½ in. circle. Drill spindle bored for ½ in straight shank drills. Feed has run of 3 in. Upright column, drill spindle and feed screw are of steel

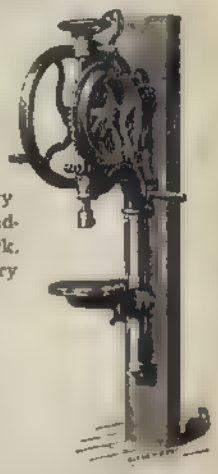
Total height 45 in., upright column 1⅞ in. diameter; table 7 in. diameter; drive gear wheel 10 in. diameter. fly wheel 14 in. diameter; greatest distance of spindle to table 10½ inches.

No. 2—Weight 100 lbs.....Each $10.00

One in a Crate

Double Geared

Self-Feed



A very strong, heavy drill, highly recommended for heavy work. Neatly finished and very durable.

Dimensions: Floor space over all, 15 x 19 inches. Has extension crank and variable feed. Drills 0 to 1¼ in. holes, and to center of 16 in. circle. Drill spindle bored for ½ in straight shank drills. Feed has run of 3 in. Upright column, drill spindle and feed screw are of steel

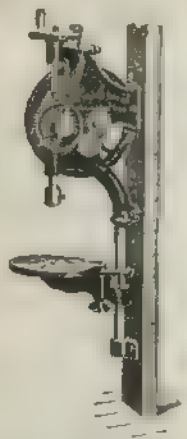
Total height 49 inches; upright column, 1⅞ in. diameter; table, 8 inches diameter; drive gear wheel, 12 inches diameter; fly wheel, 16 inches diameter; greatest distance of spindle to table 13 inches.

No. 3—Weight 140 lbs.....Each $14.00

One in a Crate

HAND AND POWER POST DRILLS

SILVER'S
Double Geared
Self-Feed



With ball bearings and intermediate gear. Fast or slow speed.

A perfect drill for light and medium work. The intermediate gear wheel eliminates necessity of turning crank reverse direction on slow speed. Has adjustable table. The ball bearing feed nut saves 20 to 50% in power. Balls of best quality steel are carried in case hardened steel discs.

Drill has ground bearings, machine molded gears, and automatic feeding device, which gives nearly a continuous feed, avoiding jamming and breaking of bits. The feed can be increased or diminished by simply turning a thumb screw.

Spindle and shafts are of steel, with bearings bored and reamed in solid frame.

Dimensions: Size of spindle, 1 inch; run of spindle, 3¾ in.; size of column, 1⅝ in.; greatest distance of spindle to table 13 in.; spindle turns 1⅓ times to one turn of crank on fast speed; crank turns 1⅓ times to one turn of spindle on slow speed; drills to center of 15 in. circle and up to 1¼ in. holes; spindle bored for ½ inch round shank drills, unless otherwise ordered; total height 48 in.

For Hand Power

No. 22—Weight 115 lbs.....Each $10.00
One in a Crate

Double Geared
Self-Feed

This drill is exactly like the No. 22, only fitted with tight and loose pulleys making it a power machine.

The tight and loose pulleys measure 8x2⅛ inches. They should be speeded about 250 revolutions, which will turn the spindle 170.

For Hand or Belt Power

No. 22P—Weight 130 lbs.....Each $14.00
One in a Crate

SILVER'S
Single Geared
Hand Feed

A first-class drill for those requiring a drill for ordinary light work. Finished in a very neat and attractive manner.

Dimensions: Floor space over all, 8 x 13 inches; height of drill 36 inches; upright column diameter, 1⅝ inches; diameter of drive gear wheel, 6½ inches; diameter of table, 6 inches; greatest distance of spindle to table, 10½ inches. Drills ¾ inch to center of 12 inch circle. Drill spindle is 1 inch steel, and bored for ½ inch straight shank drills. Feed has run of 2½ inches. Upright column and feed screw are of steel.

No. 1½—Weight 55 lbs.....Each $6.00
One in a Crate

Double Geared
Self-Feed

This drill is similar to the No. 1½, only built for heavier work and feeds automatically.

Has extension crank and adjustable feed. Drills ¾ inch to center of 12 inch circle. Drill spindle is 1 inch steel, and bored for ½ inch straight shank drills. Feed has run of 2½ inches. Upright column and feed screw are of steel.

Dimensions: Floor space over all, 9x16 in.; total height, 37 inches; upright column, 1⅝ inches diameter; drive gear wheel, 8 inches diameter; table 6 inches diameter; greatest distance of spindle to table, 10½ inches; fly wheel diameter, 14½ inches.

No. 1—Weight 80 lbs.... ... ... Each $8.00

BIT STOCK DRILL CHUCK

Made from cast steel carefully tempered. ½ in. shank. Used in connection with Nos. 1½, 1, 2, 3, 12, 22, 22P, 23 and 23P Silver's Post Drills so bit stock drills can be used

No. 120.....Each $1.00
Packed as Ordered

20-INCH SWING DRILLS

SILVER'S

Drive shaft has tight and loose pulleys. Turns 1⅜ times to 1 turn of spindle

Back gears can be furnished with this style drill when desired

The combined lever and wheel feed drills permit either the lever or the wheel to be used, without effecting the other. Aside from this they are not different from the plain lever feed. Bevel gears are accurately cut from solid blanks, the cog rack is forged from steel and the teeth are milled to gauge. Table has easy up-and-down adjustment and swings to either side. When the tool is wanted only for drilling, the countershaft for it is provided with tight and loose pulleys, 8 in. diameter by 2¾ in. face, as shown in the accompanying engraving, and should make 200 revolutions per minute. For tapping and drilling, a friction countershaft is required.

No. 858—Height 68¼ in., diameter of table 16 in., weight 700 lbs. ..Each $95.00
One in a Crate

Drive shaft has tight and loose pulleys. Turns 1⅜ times to 1 turn of spindle.

Power feed and automatic stop.

The back gear friction provides four slow speeds for heavier work, making a total of eight different speeds. The automatic stop requires only to be started and will stop automatically wherever set, at any required depth. This action is entirely independent of the wheel or the lever feed, either of these can be used in addition. Bevel gears are accurately cut from solid blanks, the cog rack is forged from steel and the teeth are milled to gauge. The top shaft has split bearings to permit of taking up wear. Table has easy up-and-down adjustment and swings to either side. When the tool is wanted only for drilling, the countershaft for it is provided with tight and loose pulleys, 8 in. diameter by 2¾ face and should make 200 revolutions per minute. For tapping and drilling, a friction countershaft is required.

No. 862—Height 68¼ in., diameter of table 16 in., weight 750 lbs. ..Each $130.00

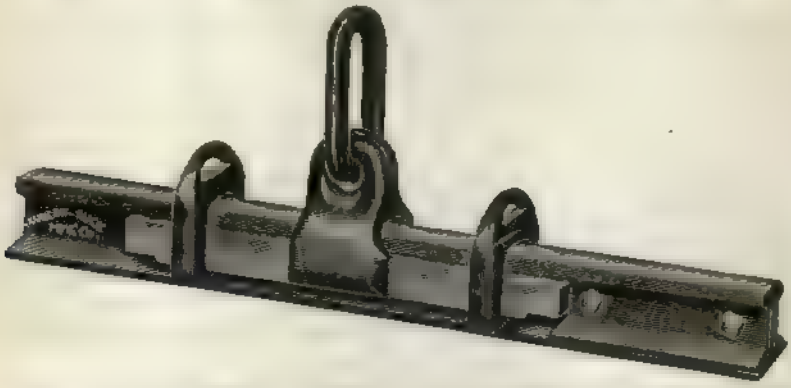
McPartland Rail Clutch

A practical and efficient tool for a real necessity to wrecking crews and construction companies. It will pay for itself many times the first year used, by saving the breakage of chains, blocks, falls and other appliances.

Weight 105 pounds. Easily handled and quickly adjusted by one man.

For a line pull, the clutch is placed on the rail beyond the angle bars. For a cross pull or elevating hitch a loaded car or engine is placed on each side of the clutch on track to which hitch is made. This prevents the track from raising.



There is no danger of kinking the rails with the clutch. The bars have a bearing surface of three inches. When used for a short grade of two plows, the leading bar clutches are chosen on the rail beyond angle bars of every joints, while the second bar clutches are placed on the rail beyond the joints next to the plow and the rear bar clutches are placed on the rail beyond the joints next to the rear plow, thus preventing a center pull.

A train of earth is pulled from under plow, thus unloading the whole train at one setting, instead of plowing off three or four cars at one time and resetting train. Heretofore the practice has been in wrecking to make chain hitches to each pair of track, placing cross blocks between the tracks to prevent kinking and pulling them together, which in nearly every case results in breaking the chains, pulling the track and ties out of position and bending or kinking the rail.

Fig 88

With this appliance there is no wrapping of chains around rails or placing "dead men." The outfit will start any size train 50 or 100 cars. The engineer often says, "Will this be sufficient to pull the largest size cars?" and "Can't we get more cars?" On the rail clutches there are from 4 to 6 spikes, to 6-inch bolts, which afford ample resistance. In this we have a combination that will resist all the strain it will be called upon to bear.

Price each $25.00

Each	$21.00	23.00	24.50

One in a Box

LAWN MOWERS

Driving rollers 6½ in. in diameter. Reel 4 in. in diameter, containing seven blades, has combined chain and gear drive. Weight of front part of the machine is carried on a wooden roller running at the rear of the cutter bar. The cutter bar may be placed flat on the sod if desired, and can be kept parallel to the ground until worn out. Mower is fitted with a patent fan elevator, a device that elevates the cut grass easily and positively into a catcher. Best steel ball bearings, set in hardened steel cones.

Townsend's Golf Wonder

Width of cut, inches	16	18
With Grass Catcher attached, each	$45.00	49.00
Without Grass Catcher, each	$40.00	44.00

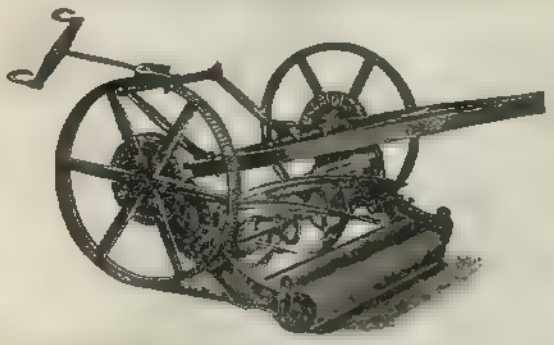
LAWN TRIMMERS

Will cut all the grass left by a lawn mower close to buildings, fences, trees, shrubbery, flower beds, etc. Will do in a few minutes the work it would take hours to do with shears or grass hooks; is invaluable to everyone having a lawn of any extent to keep in condition. Finish aluminum and gold. Four crucible steel blades, 6 inches in length, hardened and tempered. Brass bushing. The shield over the blade protects the flowers.

No. 1—Without edger ..... Each $8.00
No. 2—With edger ..... Each 9.00

One in a Box.

PONY, OR TWO-MAN MOWER



Wheels are 18 inches in diameter and carry the machine over uneven ground without jar to the machinery, insuring a steady, even cut. Reels 8 inches in diameter, with five blades of the best crucible steel, 1⅛ inch wide. Lower knife is very heavy and strong, with the best laid tool steel cutting edge. Wooden roller 4 inches in diameter. Tubular cutter bar, simple adjustment. Best ball bearings set in hardened steel cones. The machine can be thrown out of gear instantly for moving without cutting. Complete for use with pony or two men.

Townsend's Glorious—30 inch cut ..... Each $35.00

HORSE MOWERS

Made very strong and powerful, of the best materials; will cut over very rough and uneven ground, and still get down into the turf and cut its swath clean, easily and smoothly. Triple rolls 15 inches in diameter with triple pawls in each roll, making the most powerful and instantaneous driving mechanism ever put in a lawn mower. A lever beside the driver enables him to cut any height from the ground and to easily and quickly raise the blades over stones or other obstructions. A slight movement of a small lever near the driver throws the mower in or out of gear without stopping the horse. Provided with self-aligning journal boxes, preventing cramping of the journals.

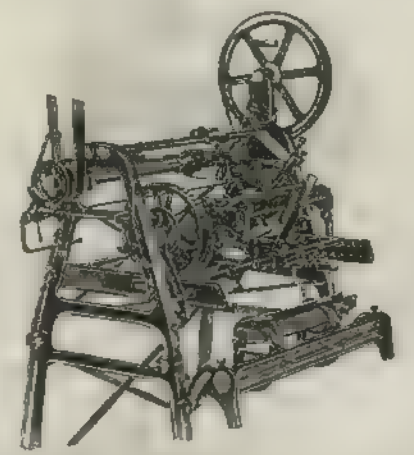
Furnished complete with tool box, seat, handles, shafts and side bar attachment, which keeps the horse on the cut grass.

Townsend's Triple Ratchet

Width of cut, inches	30	36	38
Number of blades	4	4	4
Each	$120.00	$130.00	$150.00

LAWN MOWER GRINDER AND SKATE SHARPENER

IDEAL



The Ideal Grinder is 30 inches wide, and will take in any mower with 24 inch blades, the grinding wheel having a travel of 24 inches. Is furnished with sub-base, which raises the grinder 18 inches above the floor.

The grinding wheel is 5 by ⅝, carried on a ball bearing hub, which makes it easily adjustable for wear and very easy running.

The main driving shaft is of special steel, 1¼ inches diameter, and is key-seated so as to drive the hub mounted between the bearings of the arm. The hub carries a sprocket which drives the grinding wheel by means of a steel chain. The main shaft is ball bearing. Tight and loose pulleys, 4 inches diameter, 1⅝ inch face. Size of electric motor required, ¼ H. P. The skate sharpening and straight blade holder holds the skates so as to grind them concave. Weight complete, 215 lbs.

Power Grinder—With sub-base ..... Each $60.00

LIONEL ELECTRIC TRAINS

INTRODUCTION

Lionel Electric Toys have been **"Standard of the World"** for fifteen years. Today, with electricity in use for every conceivable purpose, it has been applied to toys in a manner which is safe, clean to handle, and which has the effect of instilling into a boy's mind those fundamental principles of mechanics and electricity which may prove so beneficial to him in after life. It is, therefore, no exaggeration to say that **Lionel Electric Toys** instruct and amuse at the same time.

The simplicity with which all outfits are operated, **either on Batteries or from the House Current in conjunction with our Transformers, is proof of the scrupulous care exercised in their construction.**

Two Complete Lines

An extensive assortment of outfits is listed on the following pages, comprising two complete lines; one to operate on **Standard "O" Gauge Track** (1¼ inches wide, making a circle 28 inches in diameter) which is standard the world over, and the other to operate on **Lionel Standard Gauge Track** (2¼ inches wide, making a circle 42 inches in diameter) which has been the standard American gauge track for fifteen years.

The "O" Gauge Track Outfits are superior to any on sale and are distinctly apart from the Lionel Standard Track Outfits. Being smaller they can not contain a motor that is as large and powerful as those embodied in the bigger numbers. The extra width of Lionel Standard Gauge Track enables the larger trains to be operated at higher speed. The larger motors are built of heavier material and will be found more efficient for window display or continuous operation.

While we earnestly recommend our "O" Gauge Track Outfits as being the utmost in value, the difference in price between them and the large Sandard Gauge Numbers is so little that the latter should readily appeal to the buyer.

Construction

All motors are mechanically and electrically perfect. All cars and locomotives are so perfectly constructed that it is not necessary to use any contrivances for reducing speed on curves; for our outfits will operate at a uniform speed, both on the straight track and when rounding curves. They are not top-heavy and will not jump the track even when traveling at high speed. This is a most important feature, especially when outfits are used for window display and are not easily accessible.

Particular attention is drawn to the fact that locomotive and car bodies are constructed of **Sheet Steel**, not cast iron. They are entirely **Hand Enameled**, not lithographed. By adhering to the directions given with every outfit, there is no limit to the length of time they will run. The life of the outfit, namely, the motor, has always received great attention, as the following description of working parts shows. It will be found that this is the last part of any of the various types of locomotives to show signs of wear.

Car Bodies

Just as strict attention is paid in building the **"All-Steel"** car bodies as is devoted to the construction of motors. A durable long running motor is worthy of having a superstructure in keeping with it. The enamel, which coats the bodies, is of the best quality. It will not chip off and can be repeatedly washed, making the cars always appear attractive. Lettering and striping are in gold, and cars are finished with attention to minutest details.

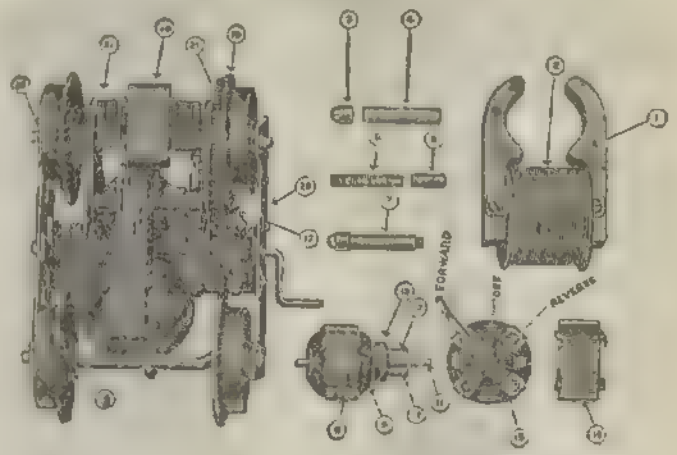
LIONEL ELECTRIC TRAINS

Show Window Display Value

Any of our outfits in operation in a show window will not only tend to increase the sale of train goods, but will draw attention to other merchandise displayed. One advantage of a train display is that only the edges of a window are used. The cost of maintenance is nominal and after the season the entire display outfit can be sold as a toy.

In summing up the construction of any of the numbers listed on the following pages, it can be seen that it is far superior to any similar line. Prices are lower than those charged for inferior goods. Every locomotive is fitted with a Electric Headlight and Lamp Resistance which prevents their readily burning out. This is a great point in making sales, although no extra charge is made for this important feature.

THE MOTOR



Cut Shows easily renewable parts

Following is a description of the working parts of motor cars

COMMUTATOR (13) Solid bronze turning, insulation between segments.

BRUSHES (6) Radial Gauze Phospor bronze with spring feed.

BRUSH HOLDERS (3 and 4) Brass tubes—detachable tops.

ARMATURE (8) Made of electrical steel punchings. Drum wound with double covered silk magnet wire.

FIELD (1) Laminated throughout, perfectly wound and insulated.

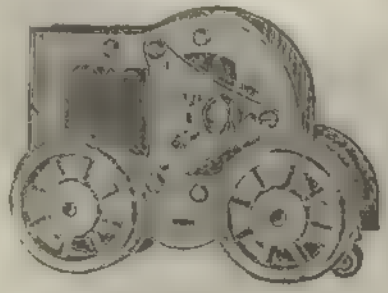
WHEELS (19) Punched of heavy steel.

THIRD RAIL SHOE (14) Case-hardened steel punching. Spring at back regulates pressure against third rail.

PINIONS AND GEARS (16 and 17) Made of steel—absolutely true—mesh perfectly.

CONTROLLER (15) Enables cars so equipped to be stopped, started and reversed.

BEARINGS (21) Made of heavy steel—Phosphor bronze bushings.

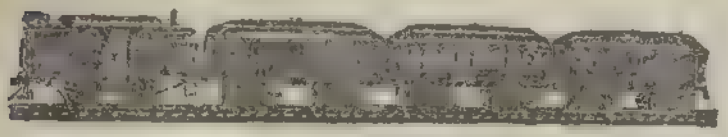


Cut Shows Easily Accessible Brushes

NOTE—The construction of all Lionel Outfits is so perfect that the track does not have to be banked when outfits are used for window display. They will maintain an even speed on straight Track or when rounding curves. No speed checking contrivances are necessary. Cars are not top-heavy and will not jump the track, even when traveling at a high rate of speed.

IMPORTANT—Carefully read the Directions Packed with Every Outfit. Attention to this will Lengthen the Life of the Outfit.

LIONEL ELECTRIC TRAINS



Per Dozen

No. 960—Consists of Electric Locomotive, 8 inches long, 3½ inches Wide; Has 4 wheels and runs in one direction only. One Mail Car, 7½ inches long, 2⅛ inches wide, 3⅛ inches high. Two Pullman Cars, 7½ inches long, 2⅛ inches wide, 3⅛ inches high. One Rheostat Mounted on a steel frame and has a sliding finger which increases or decreases the speed of the trains. All parts are of the best quality. This rheostat cannot overheat as the coil is entirely exposed to the air—insuring free circulation, consequently rapid cooling. **Operates on Standard "O" Gauge Track 1¼ inches wide.** The steel base is beautifully enameled, other parts are nickel plated. Size, 5 inches long, 2½ inches wide and 1 inch high. One Curved Track, One Straight Track, One Crossing, Forming Figure 8 Loop. No. 78 Complete, length of Train 31½ inches; Weight complete, 9¼ lbs **$230.40**

The above Outfit will operate on an Alternating Current only with Transformers Nos. 1032, 1091, 1092, 1093 or 1094 (Page 2604); on a Direct Current with No. 966 Reducer (Page 2604), or on 8 Dry Batteries with Rheostat furnished with outfit.

One Train in a Carton

PASSENGER

Per Dozen

No. 951—Consists of Electric Locomotive with Headlight, sheet steel enameled body, 11 inches long, 1 Pullman car and 1 Observation Car, each 11 inches long, enameled and lettered in gold, together with 8 sections Curved track, making a circle 3½ feet in diameter. **Operates on Lionel Standard Gauge Track 2¼ inches wide.** The contact of Locomotive enables connecting interior lights in Pullman cars. Roofs of cars are removable. This is a popular outfit and should appeal to those who desire an excellent model at a low price. Length of complete train 34 inches. Weight complete 10 lbs. **$275.20**

The above Outfit will operate on an Alternating Current only with Transformers Nos. 1032, 1092, 1093 or 1094 (Page 2604); on a Direct Current only with No. 966 Reducer (Page 2604), or on 4 or 5 Dry Batteries.

One Train in a Carton

FREIGHT

Per Dozen

No. 952—Consists of Electric Locomotive with Headlight, sheet steel enameled body, 11 inches long, 2 Gondola cars, 9½ inches long, and 8 sections Curved track, making a circle 3½ feet in diameter. **Operates on Lionel Standard Gauge Track 2¼ inches wide.** This is a substantially built and low priced outfit. Many boys prefer this because cars can be loaded with sand or other freight. Length of complete train 31 inches. Weight complete 9¼ lbs. **$230.40**

The above Outfit will operate on an Alternating Current only with Transformers Nos. 1032, 1092, 1093 or 1094 (Page 2604); on a Direct Current only with No. 966 Reducer (Page 2604), or on 4 or 5 Dry Batteries.

THE WONDERFUL MUSIKLAND PHONOGRAPH

A Truly Remarkable Talking Machine, Well Constructed, Exceptionally Serviceable and Strictly High Grade in Every Respect. Positively Guaranteed by Manufacturers

List Price
$82.30

MUSIKLAND Brings Joy in Your Home at Less Than One-Fourth the Price Paid For High Priced Phonographs . . . . . .

It is the best Talking Machine or Phonograph that was ever placed on the market for the money.

It plays all kinds of disc records, the most expensive, such as Galli-Curci, Gadski, Caruso, Destinn, Farrar, Martinelli, McCormack, Melba, Schumann-Heink, Tetrazzini, Scotti, Garrison, Alma Gluck, Hempel, Journet, Homer, Braslau, and Ruffo.

It plays all high-class records with full melody and technique, as well as all the musical comedies, such as Harry Lauder and Nora Bayes.

In addition to the above, it plays all the cheaper records as well as Edison with the same attachment, and plays the Hill & Dale records with the same attachment and a steel needle, which very few other phonographs will do.

It is built on scientific principles. Note carefully the description. The cabinet is 41 inches high, 17 inches wide and 19 inches deep. Finished in high-class piano, mahogany finish. It has a violin tone chamber, all wood. No metal. In fact, it is just as beautiful as any of the high priced machines. It holds a large number of 10 and 12-inch records. It has a 12-inch turn table with green felt. A modifier to play loud and softly. Top speed regulator to play fast or slowly, as you choose.

The motor is a cast iron frame with double springworm gear, hand drill workmanship. It will play three or more records with one winding. In fact, it is everything that a high-class phonograph should be, with an advantage over almost all high priced talking machines that you can play all styles of disc records with the same attachment.

The **Musikland** is sold under a positive **Guarantee.** Can be returned for credit at our expense if not fully satisfied after a thorough trial. This is the first high-class floor **Cabinet** Phonograph that has ever been placed on the market within the reach of everybody. Why pay Two Hundred Dollars for a high-grade machine when you can procure the **Musikland** below Fifty Dollars?

The perfection of motor and other mechanical parts were effected only after considerable experiment and research. We are fully satisfied that you will **Marvel** at its **Construction, Operation** and **High Grade Appearance,** and will agree with us that it is the **Best Value Offered for the Money** in any commodity for many "moons."

Mr. Merchant—You should have a sample **Musikland** in stock. Your customers will fairly go into ecstasy when they view and hear this wonderful and magnificent Talking Machine. In addition you will be very enthusiastic. The fact that you will find it exactly as represented will compel you to be active.

Model 100 Musikland Talking Machine. List Price $82.30

CELEBRATED WONDERTONE PHONOGRAPHS

THE NAME "WONDERTONE" IMPLIES JUST WHAT THE INSTRUMENT IS, A WONDER OF TONE PRODUCTION

A WONDER OF SATISFACTION TO PURCHASER — A WONDER AT THE PRICES QUOTED

Equal fidelity of tone reproduction, from the delicate strains of the violin and the soulful vibrations of the human voice to the great aggregation of sound produced by the full orchestra or band, is what distinguishes the WONDERTONE above all its competitors.

Any Victor, Columbia, Edison or Pathe record can be played on the WONDERTONE without any change of equipment. A slight turn throws the sound box into position for playing either style of record.

Two jewel points for playing Edison or Pathe records and 200 needles for playing Victor or Columbia records are part of the regular equipment of the WONDERTONE.

Special Features of the Wondertone

TONE CHAMBER

Like the rare old violins, the amplifying tone chamber of the **Wondertone** is built of resonant wood, specially prepared, and is designed on the latest scientific principles.

TONE QUALITY

Color tones, overtones, as well as the clearest of mellow tones, the perfect reproduction of which, the aim but imperfectly realized by phonographs up till now, has been accomplished in the **Wondertone,** which ranks supreme in tone quality.

TONE ARM

Any kind of record, Victor, Columbia, Pathe or Edison, can be played on the **Wondertone,** without changing the equipment.

PLAYS ALL RECORDS

No. 150 $220.50

50 inches high; 23 inches deep; 21½ inches wide; 12 inch turntable. Racks for 13 Records and Shelves for 2 Albums. Plays seven 10 inch records with one winding.

SOUND BOX

The **Wondertone** sound box, built for free floating motion, produces an even, harmonious tone, and, being of the proper weight and balanced for the closest reproduction of tones, thus prolongs the life of the record.

TONE MODIFIER

No change of needle is required in the **Wondertone** to produce tone modification to suit the most fastidious taste. The volume of sound is increased by the simple moving of the modifier, which is operated while the machine is playing, from the outside of the cabinet.

MOTOR

The **Wondertone** motors are made by skilled mechanics from the best grade of materials obtainable. They will last for years in ordinary use and are controlled by a speed regulator, which controls the speed of the turntable.

PLAYS ALL RECORDS

CABINET

The best artist designers have produced the harmonious and beautiful lines which characterize the WONDERTONE cabinets Selected woods, put together and finished to the highest degree by expert cabinet makers, make a finished product, which for real beauty and good taste makes the WONDERTONE an ornament in any home.

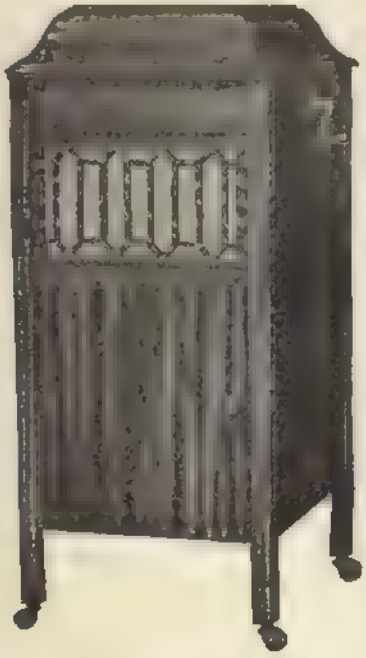
The more the WONDERTONE is compared with other makes of phonographs the more its salient good points will stand out and its superiority over its competitors be demonstrated.

CELEBRATED WONDERTONE PHONOGRAPHS

THE NAME "WONDERTONE" IMPLIES JUST WHAT THE INSTRUMENT IS— A WONDER OF TONE PRODUCTION

A WONDER OF SATISFACTION TO PURCHASER — A WONDER AT THE PRICES QUOTED

PLAY ALL RECORDS



No. 75 $112.00

Height 42½ inches; width, 18 inches, depth 20½ inches, 12 inch turn table.
Plays four 10 inch records with one winding. Racks for 30 records

No. 100 $140.50

Height, 46 inches; width, 21 inches; depth, 20½ inches; 12 inch turn table.
Plays four 10 inch records with one winding. Shelves for five record albums.

No. 125 $168.90

Height, 40 inches; width, 22½ inches, depth, 21 inches 12 inch turn table.
Plays five 10 inch records with one winding. Shelves for seven record albums.

WONDERTONE PHONOGRAPHS WHICH PLAY ALL RECORDS

Have the following equipment:

Tone Arm.—A universal Tone Arm which has an adjustment screw which makes it possible to balance the tone arm for either lateral (Victor or Columbia) or vertical (Edison or Pathe) records. By simply turning the sound box this Tone Arm is ready to play any record, no extra attachment is needed. It has a ball bearing socket which enables it to swing freely in any direction while the tension spring inside the Tone Arm keeps the weight of the Tone Arm off the record.

Sound Box. All three Wondertones are equipped with the best sound boxes obtainable, this insuring perfect reproduction of both vocal and instrumental music.

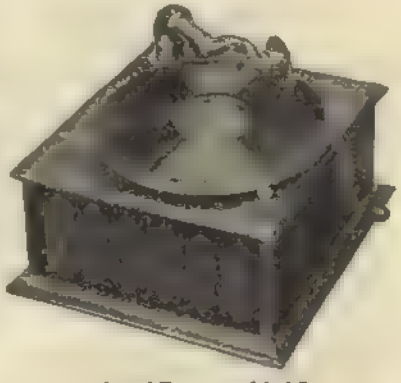
No. 50 $81.80

15 inches high; 20¼ inches deep; 16¾ inches wide, 12 inch turn table.
Plays three 10 inch records with one winding.

Motor.—The motors are double spring worm gear; they can be wound while playing and are of the best and most substantial construction. The turn-tables are twelve inches in diameter and the speed is controlled by a speed indicator and regulator.

Finish.—Extra high class Mahogany. All parts highly nickel plated. Golden Oak or Fumed Oak can be had on special order.

Equipment.—Two jewel points for playing Edison and Pathe records. 200 needles for playing Victor and Columbia records



No. 25 $41.80

7½ inches high; 15 inches deep 15 inches wide, 12 inch turn table.
Plays three 10 inch records with one winding.

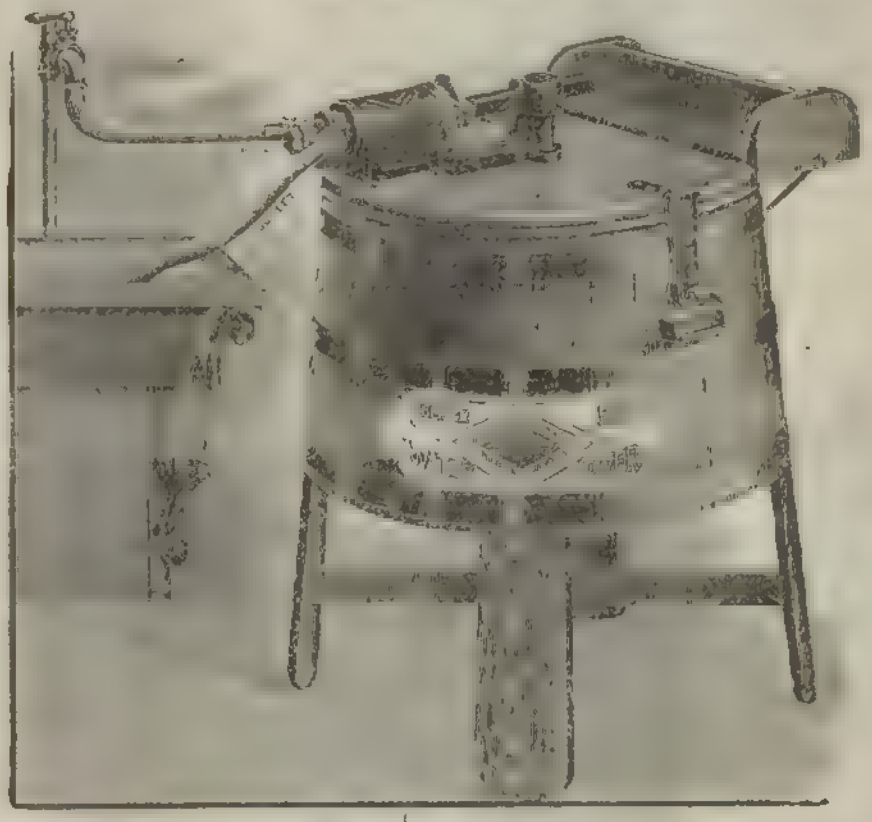
WASHING MACHINES

*NORLEIGH DIAMOND WATER POWER

**Runs by Water Power
The Hard Work and Drudgery
of Washday are Unknown where
this Machine is Used**

Connect the Machine to the Faucet; The Water Pressure Does the Work

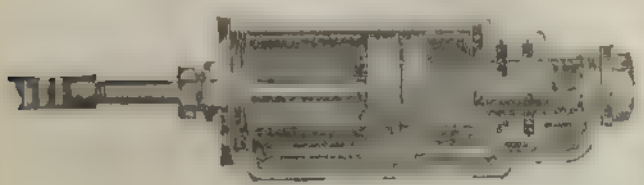
Do not Forget that there is a Limit to the Quantity of Clothes which Can be Washed at One Time and that, to Secure Perfect Results, the Machine Must Not be Overcrowded.



Works to Best Advantage with a Water Pressure of 35 pounds or Over, which Produces 60 Piston Strokes per Minute and by Movements of the Agitator; the Machine will Work with 20 pounds Pressure, which will Produce About 50 to 54 Piston Strokes per Minute, this is Sufficient to Wash Shirts or their Equivalent.

Each

No. 55—Inside Dimensions, Diameter Bottom 23 inches, at Top 20 inches, Depth 12¼ inches, Height to Top of Tub [illegible] Length over All 34 inches; Length of Wringer Beam [illegible] inches. Tub Finished in Malachite Green, Varnished; Hoops, Hinges [illegible] and Bronzed Motor Finished in Red Enamel; Motor Frame, Black Japanned; Complete with Intake and Discharge Hose; Weight [illegible] One in a Crate **$35 00**



Sectional View of Motor

These Views Give an Idea of the Extreme Simplicity of the Motor; Note the Few Parts and that no Packings, Springs, etc., are Used. Size of Motor 8¾x4 Inches.

Sectional View of Cylinder

By a Special Application of the Pressure of Water Power to Develop Power to Run the Washer, Other Types of Water Motors

The Motor, which is Very Simple, is the Most Powerful Made for this Purpose; Entire Motor, Including the Port and All Waterways is a **Solid Bronze Casting** Without Joints and Needs no Packing; [illegible] Packing is the General Source of Trouble in other Motors; the Action of the Valve is Automatic; Cylinder Head Screws in Absolutely Tight, the Pistons are of Solid Brass; a Double Flanged Gear Cap Entirely Covers the Gears, Preventing Accidents; Extra Heavy Cast Bronze Hose Connections, Brand Cast Iron Motor Base of the Over Hung Gear Cover, Added Security in Fastening

The Tub [illegible] Waterproof [illegible] Wood Mallet Driven Rivets, Strongly Reinforced Corrugated Steel Bottom Centers, Patented Hoop Spring, Non-Corrosive Lightweight Brass Hoops, Galvanized Iron Cover, and Metal Edges are Strongly Braced and Will Never Become Shaky.

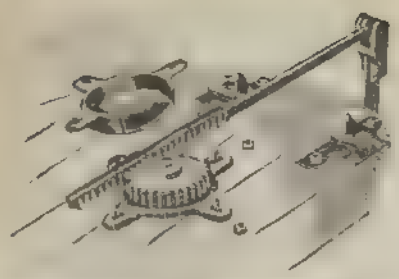
WASHING MACHINES

*NORLEIGH DIAMOND

BALL BEARING — HIGH SPEED



Cut shows View of the Gearing on Back which operates the Agitator

Cut shows Agitator and Inside of Tub with Corrugated Surface

Every Norleigh Diamond No. 22 High Speed Washing Machine is Guaranteed against Defects in Material and Workmanship for a period of Five 5, Years. Repair Parts can be furnished at all times.

Details of Mechanical Construction.

Mechanical Principle—The Novel Mechanical Principal of Construction, that is the Double Lever with Walking Beam Connection, not only equalize the Power, but give greater Speed to the Agitator than any other High Speed Washing Machine.

Ball Bearing—The Ball Bearing used is Simple, set up in Vaseline, so that it will not need Oiling for years and is without question the easiest running gearing on any Washing Machine. It is simple and does not get out of order.

Balance Wheel—Extra Heavy, this part of the machine is especially designed to equalize the power. Makes a powerful Quick Speed, low speed Washer.

Castings—All Castings made of Best Quality Steel, and every Metal Part of the Machine is not only carefully made and Extra Heavy and Strong, but is finished with the Electro Galvanizing or Sherardizing Process. This Finish does not Peel or Chuck as Paint will do and effectually prevents Rust.

Details of Tub Construction.

Tub—Tub made of Best Quality Selected Southern Cypress. Inside Corrugations. Cypress will last longer and give better satisfaction in a Washing Machine than any other wood. The Tub is finished nicely in Natural Wood Finish with a Good Quality of Varnish and is very Strong in construction, the Stave Legs being well braced to prevent leakage.

All Gears are underneath the Tub where they are entirely out of the way; no Gearing or Gearing Cloth-ing.

On account of the Special Ball Bearing together with the Double Lever and Walking Beam Construction, this Washing Machine actually does run easier when loaded than any other High Speed Washer. It not only washes Clothes clean, but on account of the easy running qualities, together with High Speed, any Housewife can get her washing finished much quicker and with less effort than with other Machines.

Each

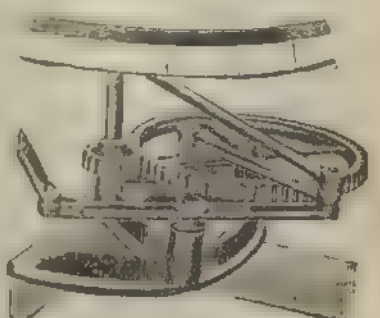
No. 22—Inside Dimensions: Diameter at Bottom 23 inches, at Top [illegible] inches; Depth 12¾ inches; Height to Top of Tub 28½ inches; Height Over All 44½ inches; Length of Wringer Board 15½ inches; Tub Made of Best Quality Cypress, Natural Finish and Varnished; Inside Corrugated Giving a Perfect Rubbing Surface; All Metal Parts Electro Galvanized Finish; Legs Securely Bolted to Body and Strengthened by Heavy Cross Braces **$18.00**

Parcel Post, Weight, Crated [illegible].

Cut shows Under View of Tub; also Gearing, Balance Wheel and Propelling [illegible] Noted Gray Frame, Method of Cross Bracing and Bolting.

Note—This Machine [illegible] Power, or [illegible] Lever is provided at lower end with a Metal Stirrup so that both Hand and Foot Power may be applied.

This Cut shows a Sectional View of the Ball Bearing Feature. The Ball is of Extra Hard Steel and absolutely [illegible] Ball all Friction is practically eliminated.



Cut shows the "Power Plant" of the Machine. It gives a good view of the Double Lever and Walking Beam Construction as exposed by removing Main Shaft on which the Small Pinion is secured.

†WASHING MACHINES

*NORLEIGH DIAMOND

Complete with Ball Bearing Reversible Wringers

NOTE The only difference between these Machines and our No. 22 is that they are constructed to run by Mechanical Power instead of Hand Power and in addition are furnished with Ball Bearing Reversible Wringers. Material and Finish is exactly the same as the Hand Power Machine, also Dimensions of Tub.

WRINGERS—The Wringer furnished with these Machines is the Highest Grade manufactured; It is Ball Bearing, will operate in either direction by moving Gear Lever is fitted with the Very Best Quality "Five Year Rubber Rolls" and with proper care will last a lifetime. An extra large Drain Board is furnished for use when wringing from Blueing Water to top of Tub. Wringer will run at same time that the Washing Machine is in operation or Independently of it.

GASOLINE POWER

Especially adapted for Farms or other use where a Gasoline Engine is available, although it may be used with any other Mechanical Power, such as Steam or [illegible].

The operation of this Machine is simple to the extreme, as there is nothing about it to get out of order. The Main Belt Drive Wheel is located underneath the Tub. This does away with any possibility of the Operator's Skirts catching in Belt or Shafting. On account of being equipped with a Power driven Wringer, it relieves Wash day of every particle of Work, of which the wringing has heretofore been the hardest part.

The Cost of Operation is so small that it can hardly be correctly estimated; Five cents will be more than enough to cover the cost of Gasoline consumed in turning out the heaviest Family Washing.

Each

† No. 66—Complete as shown above but without Belt; Drive Pully 10x1¾ inches; requires belt 1¾ inches Wide. Should be run about 350 Revolutions per minute; Cost of operation about Five (5) cents per week $37 00

One in a Crate; Weight Crated 158 lbs

ELECTRIC POWER

With Self Contained Motor

Note—Very Important, Read Carefully—This Machine is regularly furnished with Alternating Current Motor, 110 Volt 60 Cycle, but can be supplied with Direct Current 110 Volt Motor at the same price. However, if any odd-cycle Alternating Current Motor or other voltage Direct Current Motor is ordered the cost will be slightly more and we can give a special quotation on receipt of [illegible]. It is always necessary to specify on your order for Electric Washing Machines the current, voltage and cycles of the electric current with which the Washing Machine is to be used.

The Wringer together with the Motor is mounted underneath the Tub on a heavy Iron Bracket which also acts as a Brace for the Legs. The Motor is of ample strength to run either the Washing Machine alone or the Machine and Wringer at the same time at the [illegible] speed. It is the best Motor manufactured today for Washing Machines and is thoroughly dependable.

After connecting the extension Cord to any ordinary Electric Light Socket, the Agitator is started by turning to the right the Lever Handle nearest to the Motor on the side of the Tub. The Wringer is started in the same way by the Lever provided for the purpose.

Each

† No. 76—Complete as shown above [illegible] so that Machine may be [illegible] about [illegible] operation about Two (2) cents per hour $82 00

One in Crate; Weight Crated 185 lbs.

Items Marked † Not Carried in Stock; Can Only be Furnished by Shipping Direct from Factory, F. O. B. Chicago, Ills.

QUICKER YET.

OUR TERRITORY—All of Minnesota, North and South Dakota, and Montana. The following part of Wisconsin: North and West of line of railroad running from La Crosse to Tomah to Grand Rapids to Wausau to Ironwood, Michigan.

A machine that combines all the best qualities of heretofore good washers, with several new and unattained features. Built on right principle, a principle that enables it to start easy, operate easy and accomplish great results; runs smoothly and noiselessly, without friction. The workmanship of this machine is unsurpassed; in appearance it is one of the neatest and most attractive on the market.

The Mechanism. The momentum is self gathered; that is, produced by the action of the mechanism, not by the fly wheel. The mechanism is so perfectly balanced that it makes a continuous distribution of power free from any jerky action.

On starting the machine, the mechanical parts respond to centrifugal action; can be started from any position of the handle instantly and easily. Dead centers are impossible, as there are no highly geared balance wheels, or unnecessary weights to carry.

It is free from friction, as the main shaft which carries the momentum gathering device is ball bearing. The greatest amount of power comes from the least effort, as the distance from fulcrum to handle is longest, and from fulcrum to leverage point is shortest.

It's different from all other machines in that all its mechanism except the guarded racker operating the dolly, is underneath the tub out of the way—bolted to the legs. There's not a screw, bolt or rivet below the water line to rot or cause annoyance or damage.

The Dolly. The dolly or dasher, instead of being loose on the post, as in other machines, is constructed of one solid piece, operating absolutely in unison.

This eliminates the holding down of the post in bottom of tub, and the twisting, straining and tangling that ruins the clothes. To get a new grip on the clothes, lift the dolly by the ring at top of lid, and let it drop. There are no exposed parts and all your clothes are insured against rough treatment.

The Tub. The tub is made of best grade kiln dried Louisiana Red Cypress. It can neither shrink, swell nor warp, as it is shrunk to the least possible density. It is reinforced at center by a tie rod of quarter-inch round steel, with nuts on each end.

The hoops are made of steel, electrically galvanized and fitted around the tub in such a manner that water cannot get underneath to effect them in any way.

The legs are continuous, making a solid base that cannot work loose or come off, as they are part of the tub itself.

The wringer box is absolutely water tight and is so constructed that all drainage returns to the tub.

The cover is absolutely tight and can be raised or lowered without disconnecting or without removing the wringer.

Finish. Tub, wringer box and legs are finished in natural wood color and varnished; hoops and mechanism in royal blue.

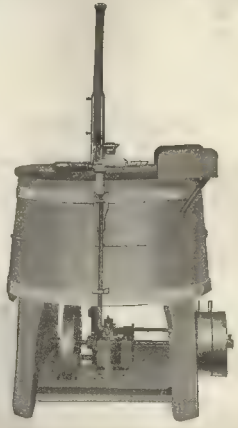
HAND.

Each

No. QYH — Quicker Yet, hand power; height over all, 38 inches; diameter of tub, inside top, 20 inches; diameter of top, inside bottom, 22½ inches; height of tub inside, 12½ inches; weight crated, 90 lbs. **$30.00**

One in a crate

COMBINATION HAND AND ENGINE POWER.



The only combination washer built with a tight and loose pulley. This permits the machine to be thrown in and out of operation without stopping the engine. The main shaft is mounted on steel roller bearings and has two cut gears. It is the most easily operated machine built.

Each

No. QYHP — Quicker Yet, combination hand and engine power; height over all, 38 inches; diameter of tub, inside top, 20 inches; diameter top inside bottom, 22½ inches; height of tub inside, 12½ inches; weight crated, 132 lbs. . **$36.00**

One in a crate

NOTE—For Quicker Yet Repair Parts see page 1622.

WASHING MACHINES.

QUICKER YET, SNOW WHITE.

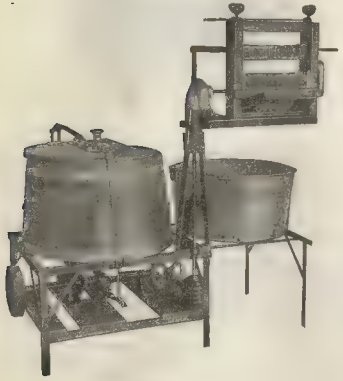
Gear and shaft driven throughout. Gears cannot get out of alignment as they run in bearings or boxings cast in one frame. All parts subject to severe strain are malleable cast or mild steel. No bolts or screws through tub.

Fitted with an especially made, any position, reversible, swinging wringer with twelve-inch best quality wringer rolls. Handy lever controls operation of wringer. Safety roll release allows the rolls to be instantly thrown apart. Wringer will clear stationary laundry tub of standard height.

A substantial angle steel machine riveted frame well braced. Made of heavy one-inch material. Extension slides underneath the machine tub when not in use. Twenty-four by twenty-seven inches is floor space required when not in use.

The choicest Louisiana red cypress is used exclusively in the manufacture of Quicker Yet tubs. Inside of tub corrugated. Cypress is not subject to excessive warping, shrinking or splitting, and does not give forth an odor. Threaded metal drain faucet allows easy draining of tub. Quicker Yet cross-arm dolly gets a firm grip on the clothes, does not damage them and is very thorough in its action of whirling the clothes back and forth through the hot soapy water, thus cleansing them quickly. Being made entirely with the straight grain of the wood splitting is obviated. Dolly is fastened stationary to dolly shaft and adjusts itself automatically to clothes in tub. Dolly shaft does not protrude into the clothes.

The tub is beautifully finished in the natural wood, as is also the wringer. Metal parts that are likely to come in contact with the washing are galvanized. All other metal parts are finished in gold bronze and black. The frame is enameled in black. The entire machine is finished like a piece of high grade furniture.

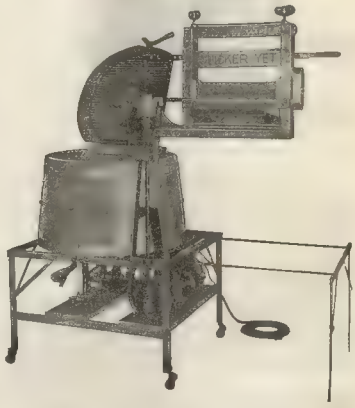


POWER.

Each

No. QYSP—Quicker Yet Power; single tub, with extension for tub or basket; equipped with power pulley; weight complete. 185 lbs. **$82.00**

One in a crate.



ELECTRIC.

Each

No. QYSE—Quicker Yet Electric; single tub, with extension for wash tub or basket; equipped with one-quarter H. P. motor, 110 volt, 60 cycle; weight of machine complete, 225 lbs. **$147.00**

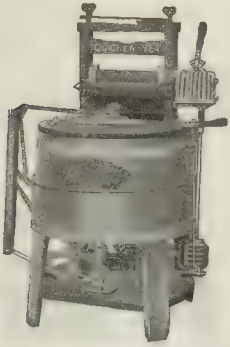
One in a crate.

NOTE.—Our stock is 110 volt, 60 cycle, alternating current; other voltage or current will be shipped from factory and charged for on basis of cost at factory on date of shipment.

For Quicker Yet Repair Parts, see page 1622.

QUICKER YET.

POWER



For use with gasoline engine, this is the machine premier in appearance and equipment.

Has the famous cross arm dolly, the greatest suds maker. It churns hot soapy water through the clothes, making them spotlessly clean.

Tub. The tub is made of carefully selected Louisiana red cypress, upon which water has no effect; legs securely bolted and braced with angle iron.

Mechanism. The mechanism is securely bolted to a platform underneath the tub, entirely out of the operators way; bearings cast together; worms and gears encased; controlling levers for both washer and wringer operated by hand, no foot levers. Lid may be raised or lowered without disconnecting any of the parts. Lid is locked while machine is in operation; lever controlling this lock throws the clutch so that when tub is opened machine is stopped.

Wringer. The wringer is highest grade, ball bearing, reversible, shaft driven, positive and equipped with 5 year guaranteed rolls. It may be operated while the washing mechanism is in motion or while the machine is at a standstill; can be stopped or reversed while the machine is in motion.

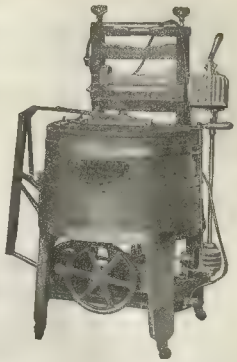
Finish. Beautifully finished in the natural wood; metal parts in blue and aluminum bronze.

Each

No. QYP—Quicker Yet. Height over all, 44 ins.; diameter of tub, inside top, 20 ins.; diameter tub, inside bottom, 22½ ins; height of tub, inside, 12 ins.; weight crated, 145 pounds..... **$63.00**

F. O. B. St. Paul

ELECTRIC



A late type machine combining all the best features of good washers.

Equipped with one-fourth horse power 1-10 Emerson Special motor and is specially wound to overcome momentary overloads.

Tub. The tub is made of carefully selected Louisiana red cypress, upon which water has no effect; legs securely bolted and braced with angle iron.

Mechanism. The mechanism is securely bolted to a platform underneath the tub, entirely out of the operators way; bearings cast together; worms and gears encased; controlling levers for both washer and wringer operated by hand, no foot levers. Lid may be raised or lowered without disconnecting any of the parts. Lid is locked while machine is in operation; lever controlling this lock throws the clutch so that when tub is opened machine is stopped.

Wringer. The wringer is highest grade, ball bearing, reversible, shaft driven, positive and equipped with 5 year guaranteed rolls. It may be operated while the washing mechanism is in motion or while the machine is at a standstill; can be stopped or reversed while the machine is in motion.

IVER JOHNSON SMALL BORE HAMMER

This is an ideal weapon for small game. It shoots a paper shell, whose crimped end gives the greatest effective range for a small-bore shotgun. Lug and barrel are a single forged piece, joint pin is solid in the frame, coil springs are used wherever possible. The coil mainspring is adjustable to either light or heavy pull. Compensating locking bolt to take up wear. Has automatic ejector.

Champion—410 gauge, 26 in. round barrel, full choke, chambered for 2 or 2½ in. paper shells.....Each $7 00

Each Gun in a Box

SINGLE SHOT RIFLES

STEVENS SINGLE SHOT

Round tip-up barrel, blued frame, plain lever, positive extractor, full oval stock, shotgun style butt with rubber butt-plate, bead front and open rear sights. Chambered same as No 27 Favorite. Designed especially for smokeless powder ammunition.

Each Gun in a Box

AIR RIFLES

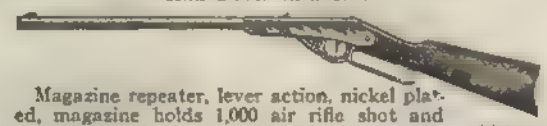
DAISY

Operates by pulling the slide toward the stock. Fires rapidly from the shoulder, the magazine having a forced feed. A strong and accurate shooter for men and boys. Metal parts in non-rusting gun blue; Stock, genuine black walnut, hand polished. Adjustable sights front and rear. Length 38 inches; weight, 3¼ lbs:

No. 25—Take-down Repeater..... Per dozen $60 00
Half Dozen in a Case

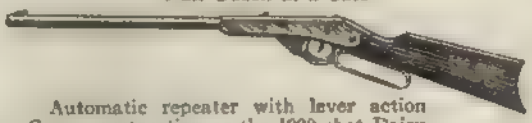
All metal parts polished and blued, stock of carefully selected walnut, hand polished. An extra strong and accurate shooter, lever action. Each rifle in a handsome box with hinge cover for display in show case or window. Otherwise same as No 3.

No. B3 1000 Shot..... Per dozen $45.00
Half Dozen in a Case



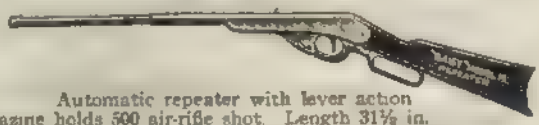
Magazine repeater, lever action, nickel plated, magazine holds 1,000 air rifle shot and loads by operating the lever, patented shot retainer which enables user to shoot downward without losing the shot. Turned black walnut stock, highly polished, fitted with rubber butt-plate.

No. 3—1000 Shot..... Per dozen $37.50
Half Dozen in a Case



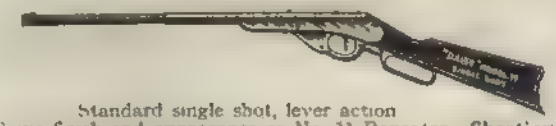
Automatic repeater with lever action
Same construction as the 1000 shot Daisy, but the barrel is three inches shorter and the magazine holds 500 air-rifle shot. Designed for boys wanting a high-grade repeater, shorter than the No 3 Daisy

No. 30—500 Shot..... Per dozen $30.00
Half Dozen in a Case



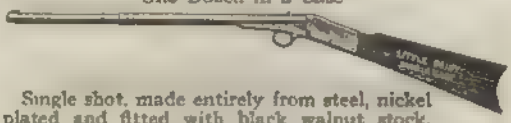
Automatic repeater with lever action
Magazine holds 500 air-rifle shot. Length 31⅛ in. Walnut stock, nickel plated single piece steel barrel

No. 11—500 Shot..... Per dozen $23 00
One Dozen in a Case



Standard single shot, lever action
Same finish and appearance as No. 11 Repeater. Shooting barrel is removable and allows the use of either air rifle shot or No 17 darts

No. 12—Single Shot..... Per dozen $19.00
One Dozen in a Case



Single shot, made entirely from steel, nickel plated and fitted with black walnut stock. Designed to meet the demand for an air-rifle smaller and lighter than the No. 2 Daisy

No. 20—Single Shot..... Per dozen $13.50
One Dozen in a Case

AIR-RIFLE DARTS

Fine steel points. Red yellow and blue

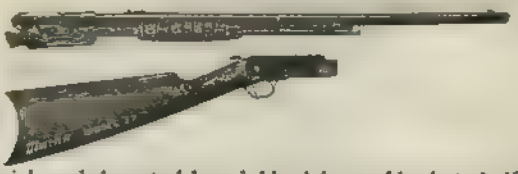
No. 17—Assorted Colors..... Per gross $3.00
One Dozen in an Envelope

CAUTION

In ordering shot for air-rifles, always specify "Air-Rifle" shot, not Standard B. B. Air-Rifle shot is extra screened and uniform in size

SINGLE SHOT AND REPEATING RIFLES

MARLIN REPEATING



Special smokeless steel barrel, blued frame, blued steel rifle butt-plate, black walnut stock and fore-end. Rocky Mountain (adjustable) rear sight and ivory bead front sight, take-down "pump" action, seven shots.

	Each
Model 27—.25-20 caliber, 24 in. octagon barrel. Wgt. 5¾ lbs.	$18 60
.32-20 caliber, 24 in. octagon barrel. Wgt. 5¾ lbs.	18 60

23 in. round barrel, trombone action, take-down. Magazine capacity fifteen .22 short, twelve .22 long, or eleven .22 long rifle cartridges. Black walnut stock and fore-end, blued frame and blued rifle butt-plate. Solid top, side ejection, closed-in breech.

Model 29—.22 caliber, 23 in. round barrel. Wgt. 4¼ lbs. Each $11.80

The magazine capacity of this rifle is larger than on any other repeating rifle of this caliber, at one loading it will hold twenty-five .23 short, twenty .22 long, or eighteen .22 long rifle cartridges. Trombone action, solid top, side ejector and take-down. Plain American walnut stock and fore-end, steel rifle butt-plate, case-hardened frame

Model 20—.22 caliber, 24 in. octagon barrel. Wgt. 5¼ lbs. Each $14.00

A very desirable target rifle, solid frame, full length magazine. Has same capacity as Model 20, lever action, blued receiver, Rocky Mountain front and rear sights, walnut stock and fore-arm, solid top, side ejector.

Model 1892—

.22 caliber, 24 in. octagon barrel. Wgt. 6 lbs.	Each $16.60

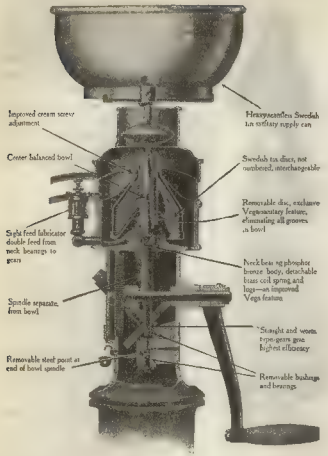
CREAM SEPARATORS.

For prices see page 1909.

VEGA.



The Vega separators are not an experiment, but the result of thirty years' growth and experience. The manufacturers have constantly aimed to build the nearest perfect separator possible, with the smallest number of parts and of the simplest design, keeping in mind at all times highest efficiency.

On account of the few parts, few bearings and the accuracy with which all parts are made, the friction in Vega separators is reduced to a minimum and as a result, it is a light-turning machine. Study the accompanying diagrams of the parts and you will be convinced.

The tinware of Vega separators is all made of the heaviest quality of Swedish tinned steel plate. The milk supply tank is seamless and so constructed as to be very easily cleaned. The same idea has been carried out in making other parts of the tinware.

Vega separators are guaranteed to have a clean-skimming capacity, equal to or greater than what is claimed for them. If they are properly handled, according to our book of instructions, the percentage of fat left in the skim-milk is lower than that of any other machine on the market.

THE VEGA BOWL.

Perfect cleanliness is absolutely necessary if cream of good quality is to be obtained. Every skimming device, no matter of what design or material, should be thoroughly cleaned every time it is used. It would be difficult to estimate the losses caused by unclean separator bowls.

The skimming bowl of the Vega is hygienic and sanitary in every respect. Every part of the bowl is easily accessible to cloth or brush. There are no joints or pin holes, no small tubes or narrow slots to catch and hold filth.

The Vega bowl, owing to its large circumference, gives great centrifugal force, consequently, separation is more perfect, and the bowl itself is easily cleaned. The Vega bowl requires little power to revolve it, therefore, it causes the least strain and wear on the driving gear, thus adding to the durability or life of the machine. The Vega bowl is detached from the spindle, and interlocks with it when in position. The spindle always remains in the machine. This avoides springing or other injury to the spindle, which will cause the bowl to wobble.

Often the claim, ease of cleaning, is made on account of the few parts in the bowl. This is not always essentially true, as the number of parts is not nearly so important as their construction and arrangement. While the Vega bowl has fewer parts than the bowls of other standard separators, we do not base our claim for ease of cleaning on that alone. Every part of the bowl that is touched by the milk or cream can be easily washed and cleansed by the use of a cloth or brush.

Some separator bowls have what they call a split-wing device for distributing the whole milk to the skimming discs. This, as the term implies, consists of wings or fins which extend out from the central tube and through which are cut narrow slots for the milk to flow into the skimming discs. It is impossible to reach the interior of these slots with cloth or brush and the only cleaning that can be done is to flush them with water. The whole milk is distributed in the Vega bowl by a distributing disc, which can be slipped from the central tube and washed as easily as a tea cup.

The bowl of the six-hundred-pound capacity separator has only seventeen discs. This does away with half of the washing. And, these discs are all alike and interchangeable, not numbered. On account of this feature, when cleaning the Vega bowl, the discs are usually put into the washing vessel and washed as easily as saucers. There is no trouble in reassembling them because there is no regular order in which they must be put back into the bowl, which makes it possible to thoroughly clean the bowl and reassemble it in less than two minutes.

Bowl Parts

CHAMPION.

Nos. 30 to 70.

The Champion Patented Cream Separator when properly set up and run the number of revolutions given on the crank will skim milk at a wider range of temperatures as clean or cleaner than any other separator manufactured.

Separator is furnished with a patented speed indicator. This indicator is attached to handle of separator and rings at each revolution of handle until proper speed is obtained, when the bell stops ringing.

The only machine which can be run by power by removing handle.

Neck bearing spring all one piece.

Each size separator will skim to its full rated capacity and will produce a fine smooth quality cream of any density of richness desired.

Every part of the Champion separator is made from the best materials and by the best workmanship and should any part show defects in material or workmanship during its first year's use, the part or parts will be replaced free of charge.

All moving parts in the Champion "Patented" Separator are oiled automatically by spray oiling to insure the longest wear and best service. We have besides this also provided a sight feed glass oiler for the upper worm spindle bearing on all separators skimming over 250 pounds to insure fresh clean oil for its high speed bearing.

The gear casing is made of best grade cast iron, enclosing the gearing and at the same time forming an oil chamber from which all bearings are oiled automatically. The casing is closed so no milk or dust can get into the oil and no oil with the milk.

Champion equalizing sleeves distribute the whole milk equally to or between each and every disk.

Champion Cream Separators are manufactured by one of the largest and most reliable manufacturers of fine tools in the world. Their vast experience with a plant fully equipped with all up-to-date automatic labor saving machines, place them in a position to furnish highest grade goods at minimum cost of production.

Champion Patented Centrifugal Cream Separator represents a revolution in invention and improvements, which produces results that fill ambitions and requirements never before accomplished in separating cream from milk with cream of any density and richness. This invention represents equal uniformity in the feeding of the whole milk from the supply to the disks or the thin spaces between the disks to the extent that each and every disk in the bowl does its equal and full proportion of skimming. The disks' uniformity for skimming is so complete that we guarantee the test taken from the composite of skimmed milk practically equally clean to any test taken during the run; and at the same time will skim clean, within any reasonable range of temperatures, as all other separators feed the whole milk from the supply into the separator disks in a direct body flow, and therefore, flood part of the disks and clogs the balance.

All the Tinware is of the "One-piece" drawn sheet steel, heavily tinned, and we call special attention to the one-piece anti-splash supply tank, and the cream and skim milk covers.

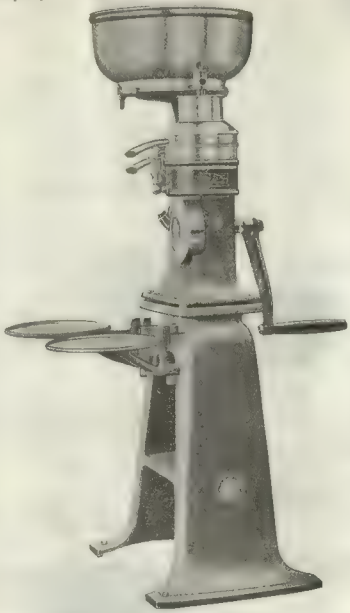
VEGA.

The Vega Sparator is not an experiment, but the result of thirty years growth and experience. The manufacturer has constantly aimed to build the nearest perfect separator possible with the smallest number of parts, simplest design and highest efficiency.

When buying a separator there are at least seven points to be considered, price, low cost of up-keep, durability, clean skimming, simpheity, easy cleaned and light turning, all these points are embodied in the Vega Separator. Each machine comes up to a high and inflexible standard in every respect.



LIGHT TURNING AND LUBRICATION.

On account of the few parts, few bearings and accuracy with which parts are made, the friction is reduced to a minimum and as a result the Vega is a light turning machine.

Nothing is of more importance than lubrication in the care of oding, some use too much oil, others not enough. Vega Separators eliminate this trouble as they are fitted with the splash oil system; the rapidly revolving middle wheel of the Vega throws oil in a spray filling the interior chamber of the frame with an oil mist which reaches every bearing

MATERIAL. AND WORKMANSHIP.

Only the highest quality of material is used in the construction and every part is made from the special kind of material found to be best suited to the particular use to which it is to be put.

Only the best of Swedish fine iron, steel and phosphor bronze are used. Rigid system of inspection, testing and trial insures against any defective material or workmanship. This insures the purchaser of a Vega a perfect machine and one that will give a long period of service.

THREE-IN-ONE.

Lubricates perfectly guns, machinery of all kinds including the most delicate clock works, sewing machines, bicycles, chain bearings and all points of friction.

For firearms it has no equal. It removes all residue of black or smokeless powder and prevents leading and pitting. It cleans and polishes the surface of the barrel. It lubricates the mechanism and never gums or hardens. Prevents rust on all metallic surfaces in any climate.

Per Dozen

No. 400—Three In One Oil; factory size bottles, in paper carton $9.60

No. 12—Three In One Oil; in 3-oz. bottles, in paper carton. . 4.80

No. 13—Three in One Oil; in 1-oz. bottles, in paper carton. 2.40

No. 200—Three In One Oil; in 3-oz. handy oil cans, one dozen put up in an attractive counter display case. 4.80

One dozen in a box.

REM OIL.

The perfect combination—lubricating oil, powder solvent and rust preventative. Cannot gum. Cannot damage anything made of wood or metal.

Because of its ability to disolve old, gummy oil, Rem Oil is ideal for use on typewriters, sewing machines, etc.

Per Dozen.

No. RO—Rem Oil; in bottles containing 2½ oz. net; weight per carton of one dozen bottles, 6 lbs. $3.70

HOPPE'S NITRO POWDER SOLVENT.

For cleaning high power rifles, shot guns, revolvers and fire arms of all kinds; removes and prevents rust; positively prevents corroding; contains no acids. Eliminates the use of the brass brush in barrels (especially sporting rifles), which is more or less destructive to accuracy.

Per Dozen.

No. 9—Nitro Powder Solvent, in two ounce bottles $5.50

PYRAMID SOLVENT.

All rifles, shot-guns, revolvers, automatics should be cleaned immediately after using. Work patches of cotton cloth saturated with Pyramid Solvent through bore to neutralize and remove all residue of smokeless or black powder and loosen metal fouling. As Pyramid is free from moisture, it may be left in rifle after cleaning. Reduces the use of a brass brush to the very minimum and makes firearms last longer and shoot more accurately. Before putting arm away apply Three In One oil which will absolutely prevent rust in any climate.

Per Dozen

No. PS—Pyramid Solvent; put up in screw top flat cans that fit the pocket. $4 80

MANY-USE.

A light, thin oil guaranteed not to gum-Free from acids and kerosene and with good covering qualities

For sewing machines, talking machines, dental engines, guns, bicycles, lawn mowers, etc.

Makes harness and all kinds of leather soft and waterproof; keeps new machines new and in perfect order. It will not glaze oilstone.

Cleans gun barrels, machine parts, chains, etc.

Polishes pianos, furniture, floors, etc., producing a fine lasting lustre.

Prevents rust on guns and metals in hot, cold, wet or dry weather.

THE REVERSIBLE SPOUT IS IN THE CAN

Per Dozen

No. 2C—Many-Use Oil; 1-oz. bottles; in paper cartons. $1.70

No. 2RS—Many-Use Oil; 2-oz. cans with reversible oiler spouts. 3.00

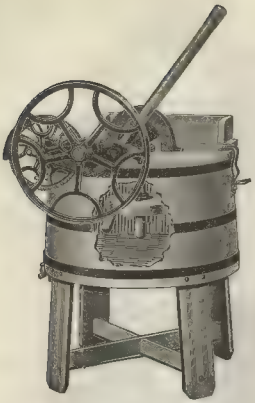
BLACKSTONE.

QUALITY.



A noiseless machine that runs very easily, due to the bearings being perfectly balanced. It is equipped with ball bearings, all friction is eliminated.

Dolly or dasher is of latest improved type with shield on bottom to protect clothes from injury. The finest and most delicate laces as well as coarsest fabrics can be washed without injury.

Has latest improved cover lock, all gears are protected with shields; has double socket for operating handle, allowing operator to sit or stand when using machine.

Has cut gears, ball bearing fly wheel and post. Segment gear and handles are malleable iron, legs are bolted to tub and braced with quarter inch rods. Wringer board is hinged and cover fastener is bolted on. Bottom drain has screw outlet which allows all water to drain out.

Tub is made of selected Louisiana Cypress, finished in a dark oak finish, hoops are heavy steel and finished in gold bronze.

Each.

No. BQ—Blackstone Quality; capacity of tub 22 gal., dimensions of tub, depth 12 inches, diameter of top 24 inches, diameter of bottom 26 inches; weight each crated, 100 lbs. **$16.50**

One in a crate.

EXTRA PULLEYS.

Extra Pulleys—For B Q washers **$1.50**

IMPROVED CAPITAL.

The improved Capital Water Power Washer is guaranteed to operate successfully and do the work thoroughly if water pressure is 20 pounds or over. It contains all the good points found in best water motor machines including the following:

Safety dasher which prevents the tearing of clothes. Polished brass motor which is rust proof, no danger of sand holes like the cast painted motor, has large size roller back of gear rack which is concave on top to hold oil. No danger of gear rack getting bent out of shape.

Intake pipe has intake pipe to prevent dirt entering motor-hose is wire wound with weight on exhaust hose.

The motor is made with paupet valve and brass springs; paupet valves always seat themselves and the longer they are operated the tighter they become thus saving power; they act very quickly and take less power than the sliding valves.

The tub is made of everlasting Louisiana Red Cypress, extra large size with stave legs, handsomely finished, nicely varnished, gold bronze hoops and trimmings.

Each

No. C. P. B.—**Blackstone Water Power,** capacity of tub, 22 gallons; dimensions of tub, depth 12 inches, diameter of top 24 inches, diameter of bottom 26 inches; weight each crated, 100 lbs. **$19.50**

One in a crate.

QUICKER YET.

Gear and shaft driven throughout. Gears cannot get out of alignment as they run in bearings or boxings cast in one frame. All parts subject to severe strain are malleable cast or mild steel.

Fitted with an especially made, any position, reversible, swinging wringer with twelve-inch best quality wringer rolls. Handy lever controls operation of wringer. Safety roll release allows the rolls to be instantly thrown apart. Wringer will clear stationary laundry tub of standard height.

A substantial angle steel machine riveted frame well braced. Made of heavy one-inch material. Extension slides underneath machine tubs when not in use. Two by four feet is floor space required when not in use.

The choicest Louisiana red cypress is used exclusively in the manufacture of Quicker Yet tubs. Inside of tub corrugated Cypress is not subject to excessive warping, shrinking or splitting, and does not give forth an odor. Threaded metal drain faucet allows easy draining of tub. Quicker Yet cross-arm dolly gets a firm grip on the clothes, does not damage them and is very thorough in its action of whirling the clothes back and forth through the hot soapy water, thus cleansing them quickly. Being made entirely with the straight grain of the wood splitting is obviated. Dollies are fastened stationary to dolly shafts and adjust themselves automatically to clothes in tubs.

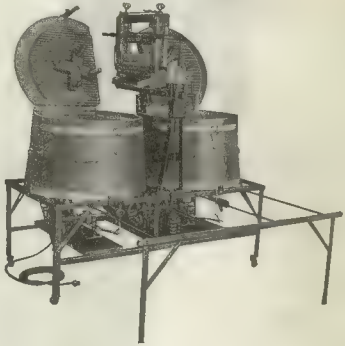
The tubs are beautifully finished in the natural wood, as is also the wringer. Metal parts that are likely to come in contact with the washing are galvanized. All other metal parts are finished in gold bronze and black. The frame is enameled in black. The entire machine is finished like a piece of high grade furniture.

POWER.

Each

No. QYDP—Quicker Yet Power; double tub, with extension for wash tub or basket; equipped with power pulley; weight complete crated, 300 lbs. **$117.00**

One in a crate.



ELECTRIC.

Each

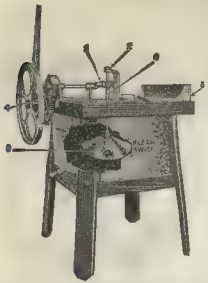
No. QYDE—Quicker Yet Electric; double tub, with extension for wash tubs or baskets; equipped with one-quarter H. P. motor, 110 volt, 60 cycle; weight of machine complete crated, 330 lbs **$182.00**

One in a crate.

NOTE—Our stock is 110 volt, 60 cycle, alternating current; other voltage or current will be shipped from factory and charged for on basis of cost at factory on date of shipment.

For Quicker Yet Repair Parts see page 1622.

KLEAN KWICK.



The washing principle of the Klean Kwick is that of forcing and pulling the hot suds through the clothes by air pressure and suction.

This is accomplished by means of a heavy galvanized cone shape stopper, 9½ inches in diameter. It raises, lowers and rotates, thereby displacing over two hundred and sixty gallons of water per minute, or in 3 to 5 minutes over a thousand gallons of hot water and steam are forced through the clothing.

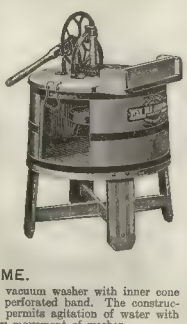
The construction of the Klean Kwick is of the highest grade; the tub is heavy galvanized iron with a smooth surface and is easy to keep clean; all gears are cut, thereby assuring quiet and ease of operation.

Wood parts are Louisiana cypress, natural finish and varnished, metal parts are aluminum bronzed

Each

No. KK—Klean Kwick; dimensions of tub, 20½x20½x11 inches; height over all, 38 inches; diameter of fly wheel, 16 inches; weight each crated, 86 lbs. **$18.90**
One in a crate.

PAN AMERICAN.



Has a special wringer board bolted to the tub which allows the attaching of a 12-inch roll wringer. Castings are machine fitted and are also heavier so as to prevent the usual great percentage of breakage. Dasher is of malleable iron heavily galvanized. Tub is of best grade Louisiana cypress, legs securely bolted and braced, natural finish.

Each

No. 22—Height to top of tub 32 inches; height of tub inside, 11 inches; diameter, 24 inches; weight crated, 59 lbs. **$7.00**
One in a crate.

ACME.

A vacuum washer with inner cone and perforated band. The construction permits agitation of water with every movement of washer.

Downward stroke forces air, steam and hot water through clothes. Quick lift gives great pulling power.

Washes curtains, laces, etc. without injury to fabric.

Made from heavy tin plate; no solder is used in its construction, this enables user to place washer on stove without danger of melting. Handle is plain finish hardwood.

Each

No. A—Acme Washer; diameter bottom, 8 inches; height over all, 45 inches; weight each, 1½ lbs. **$1.40**

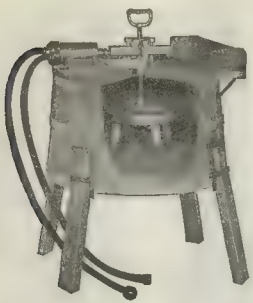
BOSS.

WATER POWER.



Semi-springless piston type. Has all the good points of the springless type motors, being so designed and constructed as to operate on low pressures where springless motors cannot be used. Will operate equally as well on high or low pressures.

Instead of being hammered to their seats at each reversal of the piston, the valves are gently seated by the single spring, which is so placed and made that it can never break or require replacement. Constructed of brass and phosphor bronze throughout.

Has heavy cast brass cylinder, rigidly set on heavy bracket having double bearing for dasher post and roller guide for piston—perforated metal screen before inlet port to keep dirt out of motor. Handle on dasher post to release dasher from clothes before opening and closing lid. Dasher adjusts through top of motor. No projection through or below dasher. Accident-proof, covered gear and rack.

Equipment.

Motor complete as described, with high-grade intake and exhaust hose. Large cypress tub, natural finish, with reinforced top—corrugations on inside—cypress dasher—detachable lid—bolted wringer attachment—detachable hardwood legs as shown, or solid legs when so ordered. Galvanized hardware and castings.

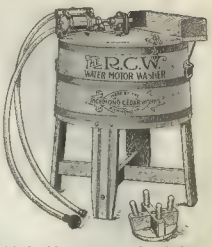
Each

No. BSM—Boss, semi-springless; height, 30 inches; depth of tub inside, 12 inches; diameter of top, 23 inches; capacity, 8 shirts; weight crated, 65 lbs. $24.00
Consumers Price **$23.50**

One in a crate.

RICHMOND.

WATER POWER.



The mechanical principle of this machine is positive in its action. All the gears are encased in accident proof covers.

The dolly is made of selected seasoned hardwood, has smooth well anchored pins and is of a design capable of heavy duty.

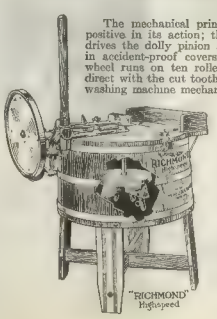
Tub is made of Virginia white cedar, corrugated on the inside and will last a lifetime. The extension stave legs are bolted securely to the tub and are well braced with hardwood sections bolted through from side to side; well braced wringer box; never slip lid lock. Finished with two coats of agricultural filler and varnished; hoops finished in gold bronze.

The patented water motor is especially suited for this size machine and is very simple; used on ordinary city pressure with the least amount of water.

Each

No. RCW—**Washer;** diameter of tub, top 21½ inches, bottom 23 inches; height of tub, 12½ inches; height over all, 27 inches; weight each crated, 120 lbs. **$55.00**

HIGH SPEED.



The mechanical principle of this machine is positive in its action; the segment lever directly drives the dolly pinion and all gears are incased in accident-proof covers. The well balanced fly wheel runs on ten roller bearings and is geared direct with the cut tooth gears so as to produce a washing machine mechanism with no dead center.

Fly wheel has a flat rim which can be belted up if desired. The lever socket is designed with two different positions to permit the operator to change the angle of the lever.

Dolly and tub same as Richmond water power washer except that tub is furnished in mahogany stain, varnished.

Each

No. RHS—**Washer;** diameter of tub, top 21½ inches, bottom 23 inches; height of tub, 12¼ inches; height over all, 27 inches; weight each crated, 115 lbs. **$22.00**

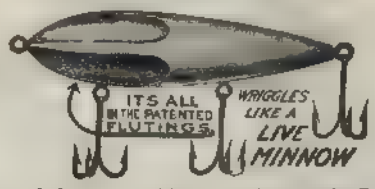
CASTING MINNOWS AND BAITS

WILSON FLUTED WOBBLER



This bait is one of the finest killers ever invented. It is an entirely original conception and has met with enthusiastic praise by every fisherman who has tried it. The bait is four and one-half inches long, and is beautifully white enameled with two rich deep red flutings on the under side and two white flutings on the top. Fitted with two treble hooks on bottom and one at tail.

No. 11.....Per dozen $12.00

Twelfth Dozen in a Box

FOSS BAITS

Little Egypt

This bait for general casting or trolling. To be used with Pork Rind Strip. O'Shaughnessy hook and nickel plated spinner. More weedless than many of the so-called weedless hooks as the hook rides upright, passing over weeds and other obstructions.

Little Egypt.....Per dozen $12.00

Twelfth Dozen in a Box

The Skidder

Same style bait as Little Egypt but lighter for shallow water fishing

Skidder.....Per dozen $12.00

Twelfth Dozen in a Box

Oriental Wiggler

Solid pork rind tail minnow, color white, fitted with 2/0 O'Shaughnessy hand forged imported hook. Weight ⅛ oz

Oriental Wiggler.....Per dozen $18.00

Twelfth Dozen in a Box

PORK RIND

These pork rind strips are made especially for the Foss lures but can be used on other baits as well. They are cut thin and flexible, just the right size. 12 strips in a jar.

Pork Rind.....Per dozen jars $4.00

One Dozen in a Carton

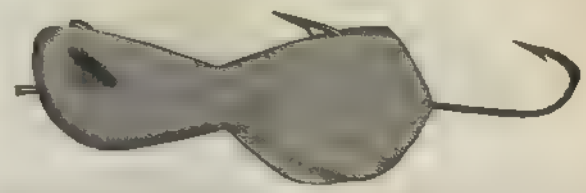
VACUUM BASS BAITS

This is a new design bait, made of selected stock with eight coats of white enamel, making it hard, durable and waterproof. Can be used at daytime, or at night as a moonlight bait. Brass metal parts nickel plated. Three treble hooks.

No. 2.....Per dozen $12.00

Twelfth Dozen in a Tin Box

JAMISON'S COAXER



Bass size, white cork body, red wings, weedless front hook and extra rear trailing hook, assorted feathers. A good killer.

No. 8.....Per dozen $9.00

Twelfth Dozen in a Box

THE "KENT" FLOATER

Made of selected red cedar, carefully shaped and coated with from eight to twelve coats of special elastic, indestructible, waterproof, porcelain enamel, made from a special formula. Mounted with nickel plated detachable hooks, spinners and connections. Patented detachable hook fastener. Body 2 inches long.

No. 2555—White belly, blended rainbow, frog spots....Per dozen $9.00

Twelfth Dozen in a Carton. One Dozen in a Box

CORK FLOATING MEADOW FROGS

Made of satin cork and ballasted so will float right side up and in the natural position of a swimming frog, viz., with the head slightly above the water.

No. 775—White belly, green back.....Per dozen $6.00

Twelfth Dozen on a Card, One Dozen in a Box

WEEDLESS FROGS

Pure soft rubber. Decorated true to life and very effective for casting among the weeds and lily pads. Best results are obtained by keeping the frog in action.

No. 867.....Per dozen $6.00

Twelfth Dozen on a Card, One Dozen in a Box

FISHING TACKLE

Forges

Champion Agricultural Lever and Crank Forges

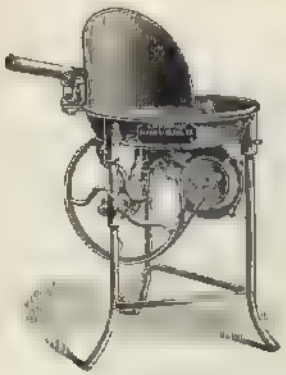

Fig. 979
No. 100

The Champion Agricultural Lever Forges are built to meet the demand of a cheap forge for farmers' use and then only for light work. They are, of course, well built, but in the cheapest manner possible, and are intended to be used where light odd jobs only are to be done. The ratchet lever motion used on these forges is durable and not liable to get out of order. We do not recommend any of the agricultural forges to anyone who expects a day's work from a workman.

No. 100. Champion Lever Forge with shield, height, 30 inches; hearth, 22 inches in diameter; fan, 9 inches; weight, 90 pounds . . . . . each $16 00

WOOD PLUMBS AND LEVELS

★DIAMOND EDGE

Stocks—Made of the Best Selected Seasoned Hardwood; Light Weight; Handy; Grooved Grip along the Two Sides, allowing an easy Grip on the Tool. Our Three Piece Stocks are made of Three Pieces of Wood firmly Glued with Waterproof Glue. They are guaranteed to stand any Climate without becoming Warped or Twisted and will give much better Service than Metal. Handsomely Finished, Mahogany Stained and Waterproof Varnished.

Vials—The Vials in all these Levels are provided with a new Adjustment. They can easily be placed in any position and securely fastened by the Two Small Screws which connect with a Steel Nut that is fastened to the stock beneath the Vial Ring and a slight pressure with a Small Screw Driver releases or fastens the Vial ring. It is Metal to Metal and is entirely reliable. Each Glass in both Plumb and Level is Set in Plaster and Enclosed in a Metal Case and held in place at each End by an Adjusting Screw. A very delicate Adjustment is thus obtained. The Glasses in all *DIAMOND EDGE* Levels are Tested and Marked with Two Indelible Lines, between which the Bubble can be readily seen from above, either side or when working Overhead.

All Brass End Caps and Vial Rings are of Extra Heavy Gauge Handsomely Polished and Finished. Heavy Brass Adjusting Screws.

One Piece Stocks—The Stocks of these Levels are made of One Solid Piece of Hardwood; Piano Finish and Mahogany Stained; Coated with Waterproof Varnish. Adjustable Tested Spirit Vials.

Three Piece Stocks—The Stocks of these Levels are made of Three Pieces firmly fastened together with Waterproof Glue. The Outside Pieces are of Seasoned Hardwood and the Inside Piece of Handsome Black Walnut; Piano Finish and Mahogany Stained; Coated with Waterproof Varnish; Adjustable, Tested Spirit Vials with Polished Brass Rings. Polished Brass End Caps.

Three Vial Levels—They have Level Vial, Plumb Vial and an Extra Vial intended for use in getting Odd Grades and inclinations without disturbing the Adjustment of either the Level or Plumb

HOW TO ADJUST *DIAMOND EDGE* LEVELS OR TO PROVE THAT THE LEVEL IS ACCURATE

Select some Firm, Smooth Surface which appears practically Level. Place the Level to be tested as in ordinary use on the place selected and mark a line around the Level so as to preserve the exact spot, as it will be necessary to reverse the Level in testing. Now, if the Bubble appears in the exact Center of the Glass when the Level is set within the Line marked on Testing Surface, and when ends of Level are reversed from Right to Left and Left to Right, then the Level is Accurate and requires no adjustment of the Glasses. Should, however, the Bubble show in the Center when Level is in First position but not in the Center when Level is reversed, then the Level is not accurate and Glasses must be adjusted; This can be done by simply loosening the Adjusting Screws, shifting the Glasses and reversing the Level Back and Forth and the Glasses up and down until the Bubble shows in the center. Tighten the Screws and the Operation is complete. The same principle holds good in reference to the Plumb Glasses, except a Vertical Surface must be employed instead of a Horizontal.

LEVEL GLASSES

★DIAMOND EDGE

All Glasses used in Diamond Edge Levels are of the Best Clear Tubes, accurately Proved inside, leaving a True Cylindrical Form. This is of Vital Importance because should the slightest imperfection be left on the Interior, the Bubble will not travel true and thus render a Level worthless. Center marks are Cut into the Glass and filled with Red Enamel making them plainly readable. Glasses are set into Cold Rolled Steel, Nickel Plated Holders and Plastered at ends. Holders are firmly riveted to Polished Brass Adjusting Rings of 2⅜ inch Diameter.

EXTRA LEVEL GLASSES WITH GRADUATED RING

Only Best Quality, Pure, Clear, White Spirits used in *DIAMOND EDGE* Levels.

No. 30—STANLEY DUPLEX

These Levels can be read conveniently, even if held at arms length above the head. They have three glasses: A level glass set in the top in the usual way, a plumb glass, and a second level glass set in the side. These latter two glasses are set close to one surface of the stock so that the angle of vision of the bubble is greatly increased. The second level glass can be readily reversed to form a second plumb, if desired.

STEEL PLUMBS AND LEVELS

★DIAMOND EDGE

Stocks—The Stocks of these Levels are made throughout of Best Quality Cold Rolled Steel, Substantially put together. The Frame is Electrically Welded instead of being Riveted, thereby making it more Secure. The Webs of the Stocks are Riveted to the Frame and made to Stand Hard usage. Guaranteed not to Warp or get out of True and will give entire Satisfaction. The Webs of the Stocks are Oxidized Copper finish, the Frame Handsomely Nickel Plated and Polished.

Vials—Vials in all these Levels are provided with a new adjustment. They can easily be placed in any position and securely fastened by the Two Small Screws which connect with a Steel Nut that is fastened to the stock beneath the Vial Ring and a slight pressure with a Small Screw Driver releases or fastens the Vial Ring. It is Metal to Metal and is entirely reliable. Each Glass in both Plumb and Level is Set in Plaster and Enclosed in a Metal Case and held in place at each End by an Adjusting Screw. A very delicate Adjustment is thus obtained. The Glasses in all ★DIAMOND EDGE Levels are Tested and Marked with Two Indelible Lines, between which the Bubble can be readily seen from above, on either side, or when working Overhead.

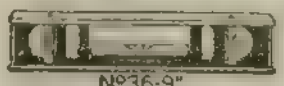
IRON PLUMBS AND LEVELS



Style of 6 and 9 in.

Style of 12 to 24 in.

No. 36G.—STANLEY

GROOVED BOTTOM

Tops and bottoms milled and wet ground to insure two perfectly parallel surfaces. The glasses are so set that either surface may be used to level or plumb. They are set in metal cases which fit accurately on supports cast in the frame of the level. The cases are held on the supports by means of eccentric cone centers at each end, with screw adjustment.

To adjust the glasses, slacken the screws, insert paper between the case and the support that will bring the bubble to the proper position, tighten the screw and the glass is held firmly in place.

Japanned Cast Iron Frame; Nickel Plated Trimmings; Two Plumb and One Level Glass; Proved Glasses.

EMPIRE

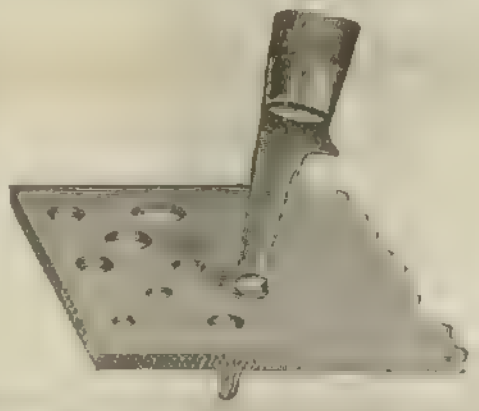
WITH BELT PUNCH BLADE

The Belt Punch Blade as introduced into our several Patterns of Pocket Knives is of the Latest Style and so Constructed that it will Always Cut a Clean Hole from the Extreme Point Back to the Tang. Made of the Finest Genuine Firth English Steel, Properly Concaved and Ground to a Razor Edge. Will Cut a Perfectly Round or any Special Shape Hole, from ⅛ of an Inch to as large as may be necessary to Accomplish the Work Desired.



The range of work it will Perform is Practically Unlimited. It is Especially Valuable in the Place of the Old Style Belt Punch and does the work Better in Less Time and in Places Where a Belt Punch Would be Impracticable. It is an Absolute Necessity with Horsemen, Farmers, Saddlers, Liverymen, Engineers, Teamsters and all Mechanics Who Come in Contact with Leather Work or Leather and Rubber Belting.

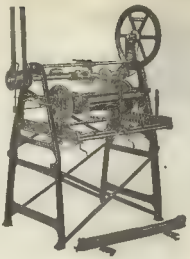
No. WB7 -Lawn Roller: one section; diameter, 24 inches; length, 24 inches; weight empty, 110 lbs.; weight filled with water, 500 lbs **17.00**

LAWN MOWER GRINDERS.

IDEAL, POWER.



The only machine that will positively grind the reel knives of a lawn mower to fit the straight blade, in case the latter should be sprung or bent. This is one of the most important features of lawn mower grinding. Will also grind the spiral knives to fit a crooked lower blade Any intelligent person can sharpen a lawn mower with accuracy in one-half the time required by the old method

GENERAL DESCRIPTION.

The grinding wheel is carried by an arm with bearings on the main shaft. The arm is counterbalanced by a weight at the rear of the machine, and the grinding wheel is free to move up and down, and is carried along the main shaft by means of the feed screw and sliding head. At the front of the arm is carried a hook under the straight blade of the lawn mower and holds the grinding against the reel knife. This hook is adjusted by means of the adjusting screw at the front, making possible a very fine adjustment. By pushing the shaft which carries the hook downward, it can be given a quarter turn, which allows the arm to be raised when changing from one knife to the next. The spring returns the hook to the same position. At the side of the grinding wheel there is a steel finger which passes around to the face of the grinding wheel and keeps the reel knife in the proper position while grinding. It is the same principle as sharpening a spiral cutter. It is adjustable to follow up the wear of the wheel, and can also be adjusted along the circumference of the grinding wheel. Has ball bearing main shaft, special steel ground and polished, 1¼ inch in diameter. and is key seated so as to drive the hub mounted between the bearings of the arm. The hub carries a sprocket which drives the grinder wheel by means of a steel chain. Chains are high grade steel bicycle chains; feed screw is ¾ inch, carried in babbited bearings and driven by a round leather belt over large sheave pulleys. The feed is thrown in and out by means of a trip lever which engages a sectional nut with the square thread of the feed screw. The belt is shifted by means of an improved belt shifter which locks itself in either position.

DIMENSIONS, ETC.

Width of grinder, 30 inches; will take in any mower with 24 inch blades; Norton Alundum grinding wheels, 5 inches in diameter, ⅝ inch face; width between frames, 30 inches; travel of grinding wheels, 24 inches; height from floor to center of main shaft, 38 inches; height over all, 53 inches; without sub-base, deduct 18 inches; length over all, 44 inches; sub-base, 22 inches by 24 inches at base; tight and loose pulleys, 4 inches diameter by 1¾ inch face; speed of pulleys, 1,400 revolutions per minute; speed of large hand wheel, 200 revolutions per minute; size of electric motor required, ¼ to ½ horse power.

F. O. B Factory, Plymouth, Ohio.

Each

***No. SPB—**With sub-base, shipping weight approx., 215 lbs. **$75.00**

*For shipment from factory only.

GENUINE PHILADELPHIA.

TWO MEN OR PONY.

Can be drawn by two men or by a small pony, therefore can be used where trees and shrubbery will not admit a horse.

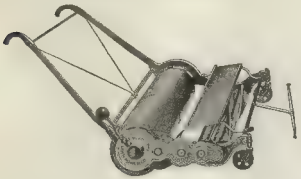
Its construction is simple and, with its solid frame, the revolving cylinder can be removed by taking off the two box caps, making it easy to repair. Every machine is guaranteed to do good work.

12-inch driving wheels, 6¾-inch cylinder with 4 corrugated steel blades. Bottom knife is adjustable to cylinder.

F. O. B. Philadelphia, Penn.

Cut, inches	25	30
Weight, pounds	150	155
Each	$50.00	75.00

DRAFT POLE, PONY.



This style is standard the world over, being used on government grounds, public parks and large lawns throughout the country.

The original Philadelphia Pony Mower, with solid, revolving, 4-knife cutter.

Every machine warranted.

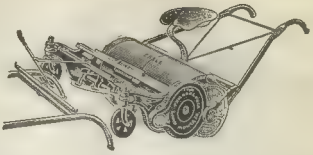
The 30-inch size is made with either open or closed cylinder. In ordering this size be sure to designate which is wanted.

The 35-inch size is made only with open cylinder.

F. O. B. Philadelphia.

Cut, inches	30	35
Weight, pounds	450	500
Each	$100.00	120.00

HORSE.



Made with added weight of iron for strength, increased diameter of cylinder for draft and large shafting and journals for durability. Has patent adjustable boxes for taking up the wear of journals, wrought iron front and back girths, making the frame solid; cutting cylinder is stationary; bed knife is adjustable to cylinder; cylinder blades are riveted to the spiders.

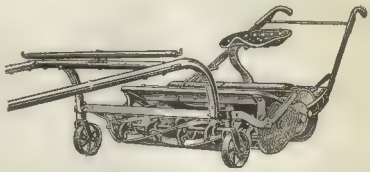
Five cylinder blades, height of driving roller 14 inches, diameter of cylinder 7¼ inches.

Equipped with seat, shafts and side draft attachment. (No reduction is made without seat and shafts.)

F. O. B. Philadelphia.

Cut, inches	30	35	40
Weight, pounds	645	670	710
Each	$100.00	125.00	150.00

HORSE.



The best Horse Lawn Mower made. Has wrought iron frame and caster roller attachment which can be raised or lowered at the will of driver while machine is in motion. The spiral blades are bolted on the cylinder frame and adjusted by set screws, an adjustment which no other machine has.

Open cylinder with four knives, height of driving roller 13⅜ inches, diameter of cylinder 8¼ inches, cylinder adjustable to stationary knife.

Has steel shaftings, brass bushings, etc., and, when durability is considered, it is the cheapest mower on the market. Guaranteed to give satisfaction

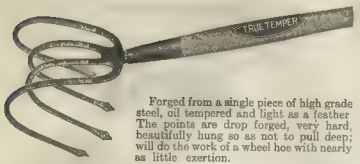
Equipped with seat and shafts only.

F. O. B. Philadelphia.

Cut, inches	36
Weight boxed, pounds	650
Each	$160.00

NOTE—For Lawn Mower Oil, see page 468.

FEATHER-WEIGHT.



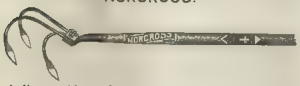
Forged from a single piece of high grade steel, oil tempered and light as a feather. The points are drop forged, very hard, beautifully hung so as not to pull deep; will do the work of a wheel hoe with nearly as little exertion.

Per Dozen

No. FW4—4 broad oval prongs; 4½-foot ash handle glass finished; gold and black finished prongs; shipping weight, approximately 30 pounds; per dozen **$8.70**

Half dozen in a bundle.

NORCROSS.



An indispensable tool for close gardening, routs smallest sprouting weeds and stirs the soil, works between rows without injuring the most delicate plants. Has detachable socket by means of which the handle may be disconnected and the cultivator hoe used as a wheel attachment. Made of best malleable iron; prongs are spring steel; handle is made of best quality white ash.

Per Dozen

No. 33—Norcross; 3 prong; length of handle, 4 ft.; weight per dozen, 24 pounds..... **$10.00**

Half dozen in a bundle.

Latest improvement over all other hand garden tools. The socket and clamp plates are the toughest of malleable. The prongs are spring steel; handle of best quality white ash. The shovels are forged from steel prongs, and cannot work loose, being clamped firmly by four strong bolts. No thumb screws are used, all parts are detachable.

Works between rows, or center shovel can be removed and the row straddled. It pulls weeds and pulverizes the soil thoroughly, giving level cultivation. This tool can be used where a wheel plow is not practical.

Per Dozen

No. 55—Norcross; 5 prong; length of handle, 4 feet; weight per dozen, 40 pounds (without universal attachment)..... **$15.00**

One-half dozen in a bundle

NORCROSS UNIVERSAL CONNECTIONS.

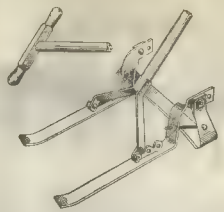
Engages the two middle bolts as shown in above cut and provides for attaching cultivator to any style of wheel plow. The front extension fits Iron Age, Planet Jr., and other slotted frame plows; rear extension fits all Vertical Leg Plows.

Per Dozen.

No. NUC—Malleable iron..... **$1.20**

In bulk.

EASY GLIDE.



Very strong and light. Made entirely of steel except handle and so constructed that each part acts as a brace to other parts; all firmly bolted together.

Blade is fastened to runners by means of adjustable bolts so by turning thumb nuts, blade is set to enter the hardest ground or just skim the surface. Handle is adjustable to any position. Painted red.

Each

Easy Glide—Garden Cultivator; length of handle, 4½ feet; weight each, 5 lbs..... **$3.00**

SIMPLEX.

Contains every essential for the Home Garden Wheel Hoe at a very low cost, with a minimum of weight and adjustment.

Cuts out three-fourths of the hard work of hoeing and saves a great deal of time.

The success of the Simplex is due to the polished V-shaped blade, which gives a razor-like "draw" cut and which works at just the right depth to cut off all weeds, stir up the soil and produce the proper dust mulch.

The blade is forged from tool steel, measures 9 inches across and is turned up at the tips to safe-guard the growing plants.

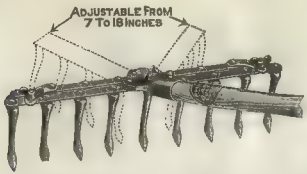
Any standard tools, including the famous "Midget" seeder may be attached if desired

Each

No. A3—Simplex Garden Cultivator; width of blade, 9 inches; 14-inch oval steel spoke wheel with 1¼-inch tire; attractively finished; weight each, 11 lbs..... **$5.40**

HAND CULTIVATORS.

PULL EASY.



Can be instantly adjusted to fit rows of any width; when arms are spread it is like a rake 18 inches wide; for narrower rows the outer ends can be brought to within 7 inches of each other. The width is adjusted by loosening two wing nuts; middle tooth can be removed so that cultivator will straddle one row of plants. Shape of teeth causes ground to be stirred or pulverized thoroughly without operator having to exert any downward pressure.

Cross bars and tines are one piece pressed steel, castings are malleable iron; handle is straight grained white ash. All metal parts are painted gray.

Per Dozen

No. PE—Hand Cultivator; full width, 18 inches; minimum width, 7 inches; extreme length, 54 inches; length of handle, 4½ feet; weight per dozen, 40 lbs. **$16.30**

Half dozen in a bundle.

WAR GARDEN MODEL.

Combines the popular five prong style with the great Pull Easy Adjustable feature. Can be instantly adjusted to fit different width rows. Center tooth can be easily removed to allow straddling of rows. When spread to full width will prepare deeper finer seed beds than a rake. Has channeled steel teeth, sharpened points, concaved to insure perfect scouring.

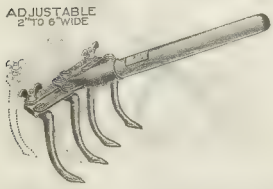
Cross bars, teeth and handle socket are of pressed steel, handle is straight grain polished white ash. All metal parts painted deep blue.

Per Dozen

No. PE5—Hand Cultivator; full width 11 inches; minimum width 7 inches; extreme length, 54 inches; length of handle, 48 inches; weight per dozen, 32 pounds **$19.20**

Half dozen in a crate.

PULL EASY JUNIOR.



A small adjustable hand cultivator for use amongst flowers and small shubbery; the tines are adjustable from two to six ins., width is adjusted by means of two wing screws; shape of teeth causes ground to be pulverized thoroughly; teeth are pressed steel, balance except handle is cast iron; all metal parts are painted gray.

Per Dozen

No. PEJ — Width adjustable from 2 to 6 inches; length of handle, 10 inches; weight per dozen, 12 lbs. **$9.50**

One dozen in a crate.

No. PEJ4 — Same as No. PEJ, but with a 4-foot handle; weight per dozen, 20 lbs. **12.00**

In bulk.

PULL EASY ROCKER HOE.

The Pull-Easy Rocker Hoe is used about an inch or more below the surface with about the same movement as a mop. The keen two-edged blade cuts off all weeds below the surface while the four upstanding teeth and the pivot leg in the same movement break up the soil and produce the most desirable dust mulch.

Permits very close and careful weeding and cultivation under and around large tender leaved plants.

The two-edged, keen blade of this hoe cuts on both the forward and backward motion. The socket casting has side stops which limit the oscillating movement of the blade, keeping it at just the right angle under the surface to cut properly.

The hoe proper is not lifted from under the ground, but tilts forward or backward automatically as the direction of the stroke changes.

Per Dozen

No. PEH—Blade of high carbon steel tempered in oil, length 5 ins., width 1½ ins.; teeth 2 ins. long; malleable iron castings; 4½-foot polished white ash handle; weight each, 2 lbs. **$12.00**

Half dozen in a bundle, weight 11 lbs.

HAND CULTIVATORS.

COMBINATION HOE, CULTIVATOR, PLOW AND RAKE.

STANDARD.

A spring beam cultivator equipped with four shovels, one pair hoes, one pair diamonds, two leaf guards and wrench.

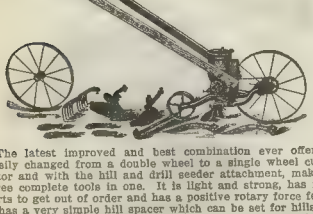
This spring beam, double wheel tool is a great favorite with all who use it, owing to the fact that the attachments when in use are entirely under the operators control. The handles being bolted to the spring beams allow them to be moved to and from each other very easily. In cultivating plants in hills the attachments can be worked in and out between the plants, doing the closest work possible to be done with a wheel hoe. The arch clears the ground fifteen inches, and is adjustable in width from seven to eleven inches. Wheels are sixteen inches high, with one inch tires. While the tool is light and easy to handle, it is built of the best materials. Handles are best oak with bent grips.

Each

No. 5—Standard Hoe, Plow and Rake, with attachments as shown in cut; shipping weight each, 26 lbs... **$12.00**

COMBINATION HOE, CULTIVATOR, PLOW RAKE, HILL AND DRILL SEEDER.

STANDARD.



The latest improved and best combination ever offered. Easily changed from a double wheel to a single wheel cultivator and with the hill and drill seeder attachment, making three complete tools in one. It is light and strong, has few parts to get out of order and has a positive rotary force feed. It has a very simple hill spacer which can be set for hills, 4, 6, 8, 12 and 24 inches apart. The seed opening is regulated by a brass thumb screw, the flow of seed instantly stopped by pulling a string. The attachments are made of malleable iron. Handles are extra quality oak, bent pattern, not sawed and are adjustable to suit the height of any person. Wheels are wire pattern, being strong and light, and are 16 inches in diameter.

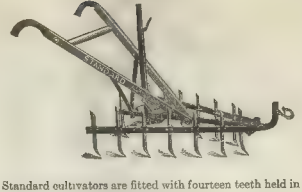
Each

No. 9—Combined Hoe, Cultivator, Plow, Rake, Hill and Drill Seeder, with attachments as shown in cut; shipping weight each, 50 lbs..... **$26.00**

CULTIVATORS.

ONE HORSE.

STANDARD



Standard cultivators are fitted with fourteen teeth held in place by means of stirrup bolt and grooved boxing; boxing can be changed so that teeth may be adjusted to different angles. Teeth are made of very best hard steel with one end shaped for cultivating, while by reversing them the tool can be used as a harrow.

These cultivators are fitted with lever for adjusting width of frame; guide wheel and long outside handle brace. Made from high grade material. Frame is painted green; handles are hardwood and varnished; hand grips are painted red.

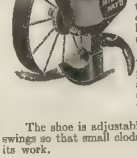
Each

No. 14—Standard One Horse Cultivator, with guide wheel, lever and handle brace; has 14 teeth; length of teeth, 10½ inches; weight each complete, 67 lbs..... **$5.86**

In bulk.

SEEDER ATTACHMENT.

MIDGET.



Will attach to any "Standard" single wheel cultivator, or to almost any make of single wheel cultivator having 6½ inches or more space between the shank and wheel. It attaches with one bolt in the same place and same manner as the cultivating tools. Will drill almost any kind of garden seed from the smallest up to peas and beans.

While the hopper holds one pint, it will handle and drill out clean a five cent package of seed just as well as a larger amount. An index naming several different varieties of seed is in plain view on top and no trouble to adjust.

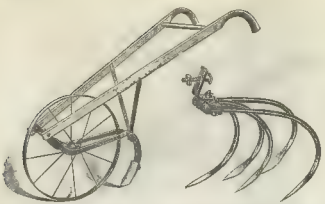
The shoe is adjustable for any depth desired and the coverer swings so that small clods or a little trash does not interfere with its work.

Each

No. 1—Seeder Attachment; size of wheel, 8 inches; height over all, 8 inches; depth of seed cup, 4 inches; weight each packed, 7 lbs..... **$6.72**

One in a carton

+RIVERSIDE.



Extra attachment.

Riverside wheel plows are made from highest grade materials and are built on correct principles. The beam is made of a very stiff steel and is so constructed that weight falls directly over the pivoting point making the plow self balancing.

Handles can be raised or lowered to suit man or boy. The different extras include shovel calk-tongue, weeder, mould-board and rake.

Metal parts are high grade materials and are finished attractively in green and blue. Handles are hardwood and are finished a bright red.

Each

Riverside Garden Plow; complete with attachments; height of wheel, 24 inches; handles adjustable to different height; weight each, 23 lbs... .....$3.70
One in a bundle.

EXTRA ATTACHMENTS.

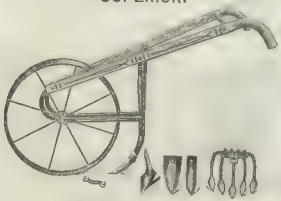
New five prong attachment to fit Riverside plows.

By means of this attachment soil can be cultivated in proper manner. Weeds have absolutely no chance to sprout; leaves soil loved and loose. The middle prong may be removed for straddling rows.

Each

No. ET5—Extra Attachment; 5 prong; weight each, 2½ lbs... ....$1.00
Six in a bundle.

SUPERIOR.



Drafted and designed mechanically correct throughout, making it a neat, light running plow.

Constructed so that the draft can be easily changed to suit different soils, making it very popular in all localities. The handles can be readily raised or lowered to suit the operator.

Fully equipped with shovel, calk-tongue, mould-board, wrench and five-tooth cultivator. Wheel and attachments made from high grade steel. Finish, handles natural, metal parts painted green

Each

No. 2—Superior Garden Plow; complete with attachments; height of wheel, 24 inches; approx. weight each, 20 lbs .$6.00
One in a bundle.

STANDARD.

The standard garden plow has a 24 inch wheel which makes it a leader in its class. The handiest and most perfect adjustment ever put into a tool. Simply adjusted up or down by loosening a thumb nut. Handles are also adjusted by same thumb nut without interfering with the plow adjustment. Bent style handles both at upper and lower ends. Has double end shovel, moldboard and landside combined sweep and rake (practically 5 tools). These are made from hard steel, ground and polished and will work perfectly in any soil.

No. 20—Standard Garden Plow, without Midget seeder attachment and with attachments as shown in cut; shipping weight each, 19 lbs..... .... $7.36

STANDARD NO. 20 WITH MIDGET SEEDER ATTACHMENT.

Standard cultivators with Midget seeder attachment are in great demand. The Midget can be attached in the same place as cultivating tools; will drill any kind of garden seed from smallest up to beans and peas.

Each

No. 201—Standard No. 20 Cultivator with Midget Garden Seeder Attachment; weight complete, 24 lbs $14.08
One in a bundle.

A light, strong, well balanced tool, light draft and easy to handle, attachments setting up close to the wheel making the tool run steady. Steel wheel runs on a bushing, eliminating wear and help stiffen frame. Handles are made from select oak wood, adjustable for man or boy. Bolted to steel frame and braced. Attachments are high grade steel and easy attached. Equipped with four attachments and wrench, one oval shovel, 4x8 inches; one mould-board, 4x12 inches; one shovel, 2x8 inches, and one 3 prong weeder. Painted red and green.

Each

No. 40—Standard Garden Cultivator; complete with attachments as shown in cut, size of wheel, 1x24 inches; weight each, 19 pounds..... $7.36
Packed flat for shipment.

Handlan No. 176 Lanterns

In Use on Over 150 Railroads

No 176 will show a saving of from 25 to 50 per cent on globe expense
Make your standard the Handlan No 176 Lantern with heat resisting globes and cut your lantern and globe account one-half.

Equipped with No. 1 burner, ⅝-inch wick
Equipped with No. 1 extra burner, 1-inch wick.
Equipped with heat resisting globe or lead flint globe

Handlan Special Lanterns

Electrically Welded

We were the originators of the open bottom outside wick raising, wire guard lantern known as

Handlan No. 176

Imitations flatter and conclusively establish the superiority of their strength of construction They diminish globe breakages, appeal to trainmen possess durability, assuring maximum service Their adoption as standard by many prominent lines is evidence of their worth Backed by fifty years of progressive manufacturing experience—ably assisted by meritorious suggestions from practical railroad men.

Handlan No. 176 Lanterns

1 The severest test of a lantern's efficiency is its ventilating qualities. We believe ours to be perfect. Our saying so won't convince you, but we do think that a trial service test will prove it.

Electrically Welded

Spring controlled bail stiffener. Strong practical construction. Especially valuable in imparting clear, distinct signals. When not in use remains in a set position out of the way.

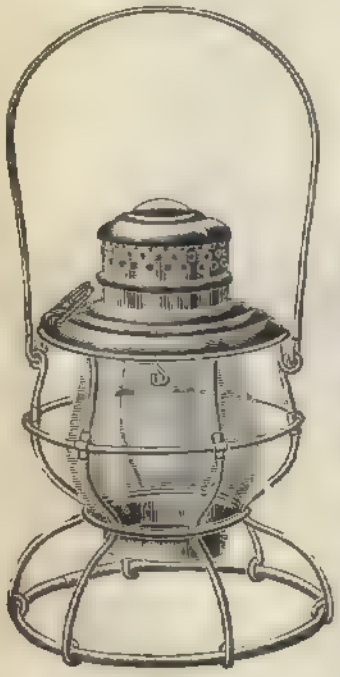
Heretofore the weakest point in construction, in this style it is admittedly the strongest part of the lantern, on account of the vertical guards being inserted through the perforations in the pressed steel globe plate, retaining them immovable in position. This method eliminates the use of tin bands, solder or clamps for this purpose. Most all other lanterns on the market have a frail tin strip or band holding the guards in place.

2. The next important factor is durability We know that our method of construction is the strongest much more so than a steel guard because service usage has demonstrated this feature to railroads who have purchased them.

Handlan No. 176 Lanterns

3 Next comes simplicity in operation. Our No 176 is considered the best because of its logical principle of manipulation and ready access to fount burner and wick, and cleaning of important parts.

Electrically Welded



This lantern is of light weight and medium height, and having a broad base is not easily overturned. For these and other reasons they appeal to the men using them, consequently receive better care than lanterns having objectionable features.

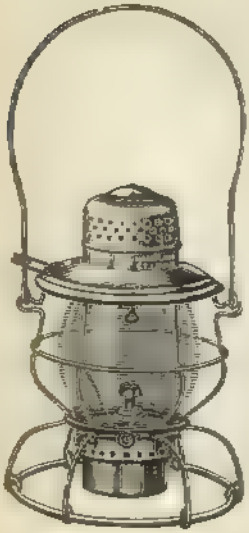
Seamless drawn oil fount. Prevents leakage.

Oil fount casing drawn entirely from one piece of metal.

Fount enclosed in casing ready to be clamped to lantern.

4. Last, but not least, is prevention of globe breakages There again our No 176 shows its superiority, because it reduces handling of globes to a minimum eliminating all unnecessary movements except cleaning of same The saving in number of globes purchased is worthy of your consideration.

Handlan Railroad Lanterns



Handlan No. 176 Railroad Lantern

With Coal Oil Burner

Outside Wick Raiser

Takes regular heat resisting globe no change in common standards, burner and wick are special, and fits your present standard lantern.

Handlan No. 180 Railroad Lantern

With Coal Oil Burner

Outside Wick Raiser

This is a regular common standard lantern, takes regular railroad globe, burner and wick are special and fits your present standard lantern

See page 167 for special coal oil burners for above lanterns.

Labels Can Easily be Changed to Suit Your Own Selection

Items Marked ✠ Not Carried in Stock; Can Only be Furnished by Shipping Direct from Factory, Erwin, Tenn.

✠REVOLVING SCREW AND BOLT CASES

AMERICAN

Tops and Bottoms of Each Case Are Constructed of Hard Wood, Grooved, Glued and Screwed Together, and Braced with Iron Rods, which Bind the Whole Firmly [illegible] Each Case Weighs Three Times the Weight that It Can be Put into Them, and by which Means they Revolve Perfectly [illegible]

[illegible] Screws Are Japanned Iron Handles, Made from Polished Steel Wire, Perfectly True and Strong. We Furnish Cases of Oak when so Ordered. The Polished and Nickeled Brass Handles and Screws Are Protected by Lacquer, which Prevents Tarnishing. Drawers Are Numbered [illegible] Front to Keep their Stock in Every Shape, Making Case Attractive. Each Drawer Is Provided with a Label Holder and Metal Strip, Which Locks Drawer Fast to Keep their Removal from the Case. Each Drawer Has a Handle and Pocket at Back [illegible] Front of Drawer.

All Numbers on Bolt and Screw Cases will be Changed to Suit Purchaser Without Extra Charge.

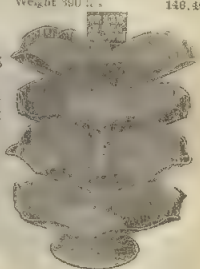
✠ SECTIONAL REVOLVING NAIL BINS

All Steel. Saves Time, Space and Nails

Occupies Less than 4 Square Feet of Space, Holds from 20 to 25 Kegs of Nails; Saves Much Time in Waiting on Customers, and Nails are Handier. More Economical than Old Style Bins, Because, Being Near the Aisle, All Over Weight is Thrown Back to the Bin, which is not the Case Where the Clerk has to Walk Some Distance for this Purpose. Is also a Fine Piece of Ornament and Add Tone to the Store.

Each Section is Hung on Finely Adjusted Ball Bearings and Turns Easily, Whether Full or Empty; Each Section Works Independently of Every Other Section; the Upright is Steel Tubing; Bins are Annealed Sheet Steel, Perfectly Finished and Hand Riveted; **Scales are Not Included, Unless Ordered Extra. All Sizes, 4 feet in Diameter**



Improved Style

	Each
No. 23—Three Sections, 15 Bins; Height 3 ft.; Weight 225 lbs	$140.00

50 Bins, 5 Sections	
✠ No. 5—Height 5 feet; Weight 350 lbs	160.00

DISPLAY STANDS

Made of No. 16 Sheet Steel

This useful Store Fixture is made to display goods. It does this effectually. It is no Toy, but will hold a large amount of goods and when these goods are systematically arranged, they will not have to be handled to be seen, but will come to you and pass by, giving room to the ones which follow and in this way by simply turning the different sections, you see everything, but do not have to handle any. The sections revolve separately. Each Section hangs on finely adjusted balls and turns with the greatest ease, whether full or empty.

Diameter First Section 48 inches; Second Section 45 inches; Third Section 42 inches; Fourth Section 39 inches; Fifth Section 36 inches.

No. WF6—Nest Contains One Each, Small Robin, Large Robin and Canary; Weight per Nest 45 lbs. **12.00**

One Nest in a Case; We Do Not Break Cases

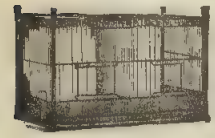
SQUIRREL CAGES
OCTAGON ALL METAL

Each

No. 020—Body is made of No. 12 Tinned Wire; Japanned Tin Top and Body; Decorated in Colors, Length of Body 24 inches; Width 16 inches; Height 22 inches; Size of Dome 12x12 inches; Size of Tread Wheel 12x9 inches; Weight Each 18 lbs..... $10.00

One in a Case.

BREEDING CAGES



Per Assortment

No. DBA—Assortment Contains Three Cages, One, Size 19x10x13½ inches; One, Size 21x11x14 inches; and One, Size 23x12x16½ inches; Weight per Nest 50 lbs..... ..... $15.00

One Assortment in a Case; We Do Not Break Cases.

BIRD CAGE SPRINGS

Brass Plated Coil Spring

Per Dozen

No. 10—With Hook and Ring; Length 3¼ inches; Weight per Dozen ½ lbs.. $0.70

One Dozen in a Box

Brass Suspension Spring

Per Dozen

No. 16—With Hook and Ring; Length Overall 3¼ inches; Weight per Dozen ½ lb. $1 80

One Dozen in a Box

Extra Heavy Brass Spring

Per Dozen

No. 14—With Hook and Ring; Length Overall 3½ inches; Weight per Dozen ¾ lb. $4.50

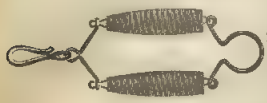
One Dozen in a Box

Brass Suspension Spring and Ladder Chain

Per Dozen

No. 182—With 3¼ inch Spring and 24 inch Chain; Hook and Ring; Weight per Dozen 8 lbs..... ..... $4.50

One Dozen in a Box



Brass Duplex Spring

Per Dozen

No. 19—With Hook and Ring; Length over all 8½ in.; Weight per Dozen 4 lbs..... $5.50

One Dozen in a Box

BIRD CAGE HOOKS

Stationary Wire Hooks

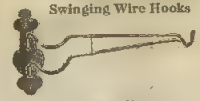
Brass Plated Hardened Steel; 1¾ inch Cast Shoulder; 1 inch Screw

Per Dozen

No 6—3 inches Long; Weight per Dozen 2¼ lbs..... $1.20

One Dozen in a Box

BIRD CAGE HOOKS

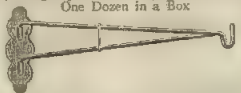


Swinging Wire Hooks

Extra Heavy Per Dozen

No. 111—Brass Plated Steel; Length 10 inches; Size of Plate 5x1⅜ inches; Weight per Dozen 3¼ lbs..... ..... $2.20

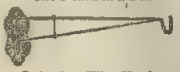
One Dozen in a Box



Per Dozen

No. 11—Brass Plated Steel; Length 10 inches; Size of Plate 4x1⅜ inches; Weight per Dozen 2¾ lbs..... $2.00

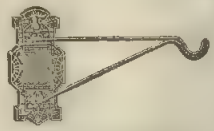
One Dozen in a Box



Swinging Wire Hooks Per Dozen

No. 223—Nickel Plated Steel; Length 8 inches; Size of Plate 2⅛x1⅜ inches; Weight per Dozen 1½ lbs..... $1.50

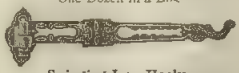
One Dozen in a Box



Stationary Wire Hooks Per Dozen

No. 1280—Amber Bronzed; 9 inch Steel Wire Hook; 5¾x2¼ inch Iron Plate; Weight per Dozen 6 lbs... ..... $1 80

One Dozen in a Box



Swinging Iron Hooks Per Dozen

No. 3024½—Amber Bronzed; 10½ inches Long; 2¾x1¼ inch Iron Plate; Weight per Dozen 10 lbs..... $0 90

One Dozen in a Box

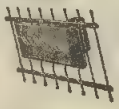
BIRD CAGE CUPS

For Japanned Cages

Per Dozen

No. JCC—Flint Glass; Size 3¾x2 inches; Weight per Dozen 2½ lbs.. ..... $1 00

Loose.



For Brass Cages

Per Dozen

No. BCC—Opal Glass, Size 3x1½x1¼ inches Deep; Weight per Dozen 3½ lbs... $1 10

Loose.

BIRD BATHS

Medium Size; 5¼x3¼x1½ in. Per Dozen

No. FGB—Flint Glass..... $1 00

No. OGB—Opal Glass; Weight per Dozen 5¾ lbs..... 1 40

Loose.

BIRD NESTS

Per Dozen

No. BN—Made of Wire Cloth with tin Rim; Wire Hook; Diameter 4 inches; Depth 2 inches; Weight per Dozen ¼ lb. $1 10

Loose

ICE CREAM FREEZERS

Tinned Malleable Iron Dasher with Revolving Triple Stirring Paddle and Automatic Twin Scrapers; The Scrapers are Hung on Dasher, so their Lower Ends Come in Contact with the Bottom of the Can, and the Friction Produced by the Revolving Can Moves the Scrapers Against the Side of the Can and Holds them Positively.

The Wheel Dasher Revolves Continuously During the Final Freezing of the Cream and Produces a Velvety Smoothness, Entirely Free from Lumps

The Can is Made of Heavy Tin Plate of the Finest Quality; the Top is Strongly Wired and Turned Over, while the Lower Part is Made to Fit Over and Under the Drawn Steel Bottom. The Bottom will not Break Nor Fall out of Can and is not Liable to Injury, as with Tin Plate or Cast Iron Bottoms; Detachable Hinged Top Frame; the Gears are Completely Covered so that Ice or Salt Cannot Get in the Cogs nor the Fingers be Accidentally Caught in them; all Parts Inside the Can are Heavily Tinned, the Outer Castings Galvanized. The Tub is Made of Best White Pine with Electrically Welded Galvanized Steel Wire Hoops, which will not Fall Off or Break.

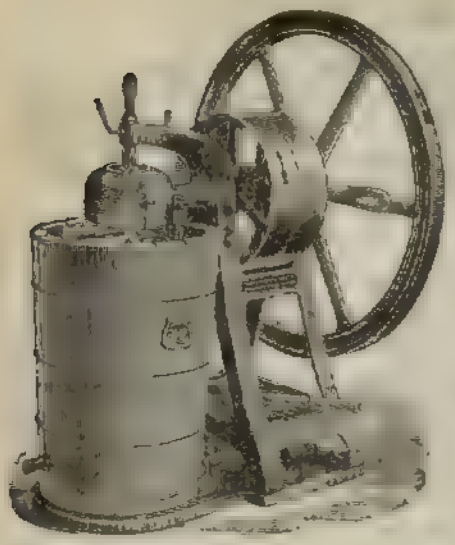
✣MACHINE ICE CREAM FREEZERS

For Power or Hand Use



IMPROVED PHILADELPHIA

With Tight and Loose Pulleys, Each 18x4 inches, and 42 inch Fly Wheel Weighing 175 lbs. Should Run About 150 Revolutions per Minute to Give Can About 100 Revolutions.

Height of Driving Shaft Above Floor 33½ inches; Base Plate 38x24½ inches.

The Can and Dasher Both Revolve and in Opposite Directions.

The Can is Made of 18 Gauge Steel, Riveted-In Seam with Heavy Malleable Iron Bottom and Heavily Coated with Pure Block Tin; The Top of Can is Reinforced with Heavy Steel Band.

The Dasher is Malleable Iron, Heavily Coated with Pure Block Tin, with Two Rolled Steel Side Scrapers and One Bottom Scraper.

The Tub is Made of 1¼ inch White Cedar, with Staves Tongued and Grooved and Bound with Electrically Welded, Galvanized Steel Wire Hoops.

40 Quart Only

	Each
✣ **No. 4012T**—With Pulleys and Fly Wheel; Weight 640 lbs.	**$128 00**

Loose

NOTE—Machine Freezers with Copper Cans Furnished when Specified, Add to Price, Each **$18.00**

✣ICE BREAKERS

For Power or Hand Use

For Breaking Ice in Small Pieces, for Use in Freezing Ice Cream and Sherbets for Ice Cream Parlors, Confectioners, Hotels and Restaurants, and for Packing Fish, Oysters, Milk, etc., or where Broken Ice is Required in Quantities.

No. 12

Shaving Breaker Taken Apart for Easy and Quick Removal of Cylinder

No. 15

✣NEW RAPID

Flanged and Ribbed Cast Iron Frame Plates, Held Securely Together by Strong Bolts, Extending Across the Width of Machine and Held Tight by Lock Nuts, The Side Frames are Closed Tight at the Bearings, Preventing Ice Passing Through Into the Pulleys an Important Feature not Found in Other Breakers; The Lower Plate in All Except No. 12 is Fitted Into Slides and can be Used Either at Front or Back of Machine as Desired; The Upper Back Plate in all Except No. 12 is Made to Adjust Toward or Away from the Cylinder, in Order to Break the Ice Finer or Coarser with the Plate in Use.

The Cylinders are Heavy and Strongly Braced, Clamped and Keyed to the Steel Driving Shaft, which is Supported in Bearings of Ample Size and Well Babbitted.

The Picks are Best Grade Drop Forged Steel, Made Round and Tapered at Shank to Fit Taper Hole in Cylinder, and will Interchange without Machining or Filing. They are Readily Removable from Socket by Tapping on Back End, yet are Driven Tightly into Socket During the Breaking of Ice, and will not Loosen and Fall Out.

Two Combs, One Fine and One Coarse, are Furnished with Each Machine; Should Run 150 Revolutions per Minute, Fly Wheel with Handle Tight and Loose Pulley, Furnished with Each Machine.

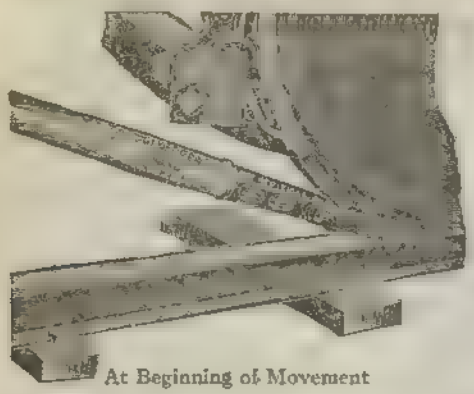
Glue Information

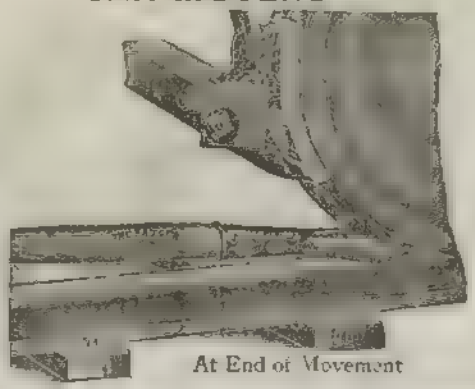
Use Alum to Keep Glue from Souring. Glue Mixed with Vinegar is Stronger than when used with Water; will Remain Liquid at a Temperature as low as 50 Degrees, and After Being Applied will Resist the Action of Water and Dampness Better.

Always let Glue Soak a few Hours or over Night before Cooking, add Enough Water to bring to Proper Consistency, then Boil at about [illegible] to Burn Glue, as it will Spoil it.

CAR MOVERS

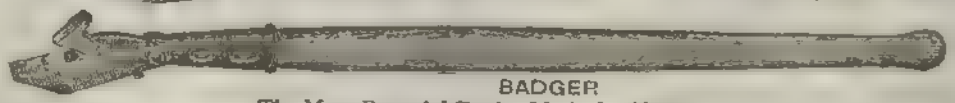


At Beginning of Movement



At End of Movement

Showing Top and Bottom of Head



BADGER

The Most Powerful Device Made for Handling Freight Cars

Has Two "Never-slip" Four Cornered Spurs, which Catch the Outer Edges of the Rail where it is Soft and Not Alone on Top of the Rail, which has Become Case Hardened from Contact with Car Wheels; These Spurs Can be Removed and Turned Three Times and Ends Changed should the Edges Become Dull; By Use of the Double Spur a Double Hold upon the Rail is Obtained and Thereby Double Resistance Offered against Slipping.

It is also Provided with a Cam, which is Pivoted to the End of the Main Lever in such a Way that when the Handle is Pressed Down it Lengthens, and Follows the Wheel, Adding an Immense Rolling Power.

So Constructed that when the Handle is Raised to Push the Mover Forward it Raises the Spur from the Rail, thus Doing Away with All Springs, which Weaken and Wear Out and Become a Source of Detriment and Trouble.

Each

No. B—Blue Japanned Malleable Iron Socket and Shoe; Special Tool Steel Spurs; Hard Maple Handle Varnished Two Coats; Length Over All 62½ inches; Diameter of Handle at Socket 2¾ inches, With One Extra Set of Spurs; Weight Each 15 lbs $8.00

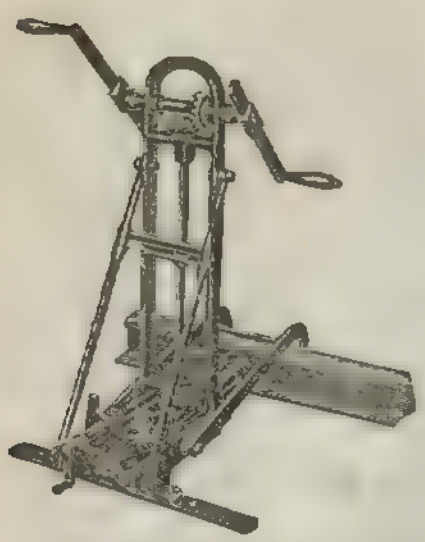
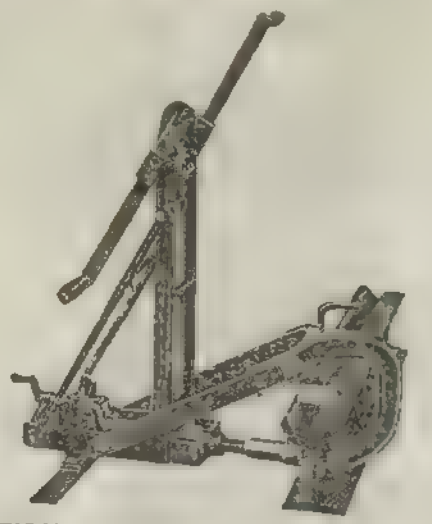
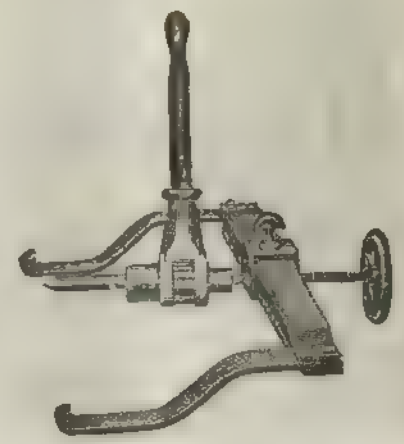
TRACK DRILLS

For Drilling Rails, Structural Steel, Etc.







✣NEW PAULUS VERTICAL

The Operator Stands Erect, Working with Greater Power and Less Strain than with a Horizontal Drill; Saves Time, as the Action of the Bit is Continuous; No Loss of Motion or Time as with a Lever Action Ratchet Drill; the Bit is Not Withdrawn from the Rail to Get Out of Way of Passing Train. The Top of Frame is Thrown Back, Releasing the Hooks, which are Lifted Out of the Way.

The Feed is Automatic and Requires no Adjustment.

Japanned Malleable Iron T Frame, Drop Hooks, Gear Wheels and Adjustable Crank; Hardwood Handles. Height 33 inches; Width of Frame 24 inches, Length of Base Plate 22 inches, Length of Handle Cranks 21 inches.

STYLE A

The Standard Style of Clutch

The Spindle Chuck on This or Style D is Interchangeable, the Drill Taking Either the Rich Spindle and Flat Bit or the Regular Twist Bit Spindle and Bit.

	Each
No. ARB—With Regular Twist Bit Spindle	**$42 00**

Weight 95 lbs.

LYRIC RECORDS.

We have satisfied ourselves that the Lyric Record is the best commercial record on the market of Hill and Dale cut. Every manufacturer recommends his particular brand, but after trying all the different makes we feel certain that the Lyric line will meet 90% of the requirements.

The Lyric Record is known as a vertical cut or Hill and Dale type. The waves are recored from the bottom of the grooves. The lateral cut, of which the Victor or Columbia records are samples get its reproduction from the side of the grooves. In vertical cut records the needle vibrates up and down and the sound box, to receive these vibrations, must stand facing the front.

The Lyric Records will not reproduce on Victor or Columbia machines unless these machines are fitted with a universal tone arm.

The better the music, the better the "rag" it will make. For evidence, listen to Lyric Record No. 4156 and hear in the excitement of "Peter Gink," strains familiar to music lovers under a somewhat similar title. The musical purist may grieve, but the world will dance to it.

Records are **not** sent on approval. Order a few sample records and satisfy yourself **first** before buying a stock.

DANCE RECORDS.

$1.00 | In the Gloaming ..... McKee Trio, Violin, Cello & Piano

ASSORTMENTS.

Because of the unprecedented demand for records at this time we have made up the following two assortments which represent to our minds, the most popular sellers.

These records can be ordered individually or in assortments, but the number 25 assortment is the smallest stock of demonstrating records that any dealer handling Farwell machines should carry, while the number 50 stock is much more complete.

We have satisfied ourselves that the Lyric record is the best record made of Hill & Dale cut. These records are sold with the understanding that there is no exchange, but with the assurance that we continue to maintain the F. O. K. policy of always having saleable goods in assortments.

ASSORTMENT OF FIFTY RECORDS.

DAYTON

AERIAL TRUCK

Representing what is Popularly Termed a "Hook and Ladder Truck," has Four Large Steel Ladders, all of which can be Coupled Together and Raised High into the Air or Lowered, as Desired, by Turning the Small Crank on the Side. When Raised the ladders can be firmly Held at any Altitude Desired by pressing the Hoisting Crank Against the catch Provided. By Releasing the Crank the Extension Ladders will Drop Back Again into Position. This Toy, which is Manned by Two Firemen, is also Equipped with an Automatic Gong, which Rings Continuously whilst Toy is in Motion. Can be Made to Run Either in a Straight Way Course or in a Circle by Adjusting the Front Wheels, as desired.

Enameled Red, Gold Bronzed Wheels and Fenders and Gold Bronze Decorations.

Per Dozen

No. 402—Length 20 inches; Width 4¾ inches; Height 8 inches; Height Ladders fully Extended over 50 inches; Weight per Dozen 48 lbs. **$23 00**

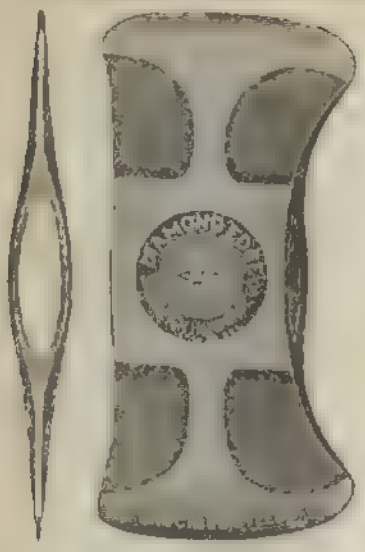
MONROE DESIGN



DOUBLE BIT AXES
PHANTOM BEVELED
*DIAMOND EDGE

Polished and Labeled; Carmine Painted Bevels

DIAMOND EDGE Axes are Recognized as Being the Best Made. They are **Hand Tempered** by an Improved Process; Every Axe **Carefully Tested** before leaving the Factory. This Practically Prevents Axes with Flaws or Soft Cutting Edges Reaching the User. It also insures Uniformity of Temper, without which an Axe will Not Hold a Fine, Sharp Cutting Edge.

Highest Grade **Crucible Steel** Bit, Carefully Tempered and Ground, Soft Steel Body. The Eyes are Punched from Solid Steel and will not Scratch nor Break, as Occurs with Axes Having a Rolled or Welded Eye. The Eye is Tapered from the Outer to the Inner Opening; this Holds the Handle Firmly and Prevents its Splitting

In Ordering Axes on this Page Give Numbers and Weights Only

DOUBLE BIT AXES

*DIAMOND EDGE

Gold Bronzed Body; Polished Bit and Head

DIAMOND EDGE Axes are Recognized as Being the Best Made. They are Hand Tempered by an Improved Process. Every Axe Carefully Tested Before Leaving the Factory. This Practically Prevents Axes with Flaws or Soft Cutting Edges Reaching the User. It also Insures Uniformity of Temper, without which an Axe will Not Hold a Fine, Sharp Cutting Edge. Highest Grade Crucible Steel Bit, Carefully Tempered and Ground. Soft Steel Body. The Eyes are Punched from Solid Steel and will not Stretch [illegible] as Occurs with Axes Having a Rolled or Welded Eye. The Eye Is Tapered from the Outer to the Inner Opening; this Holds the Handle Firmly and Prevents its Splitting

In Ordering Axes on this Page, Give Numbers and Weights Only

DIAMOND EDGE Axe Wedge Used in All Our Handled Axes. Full Description on Page 3.

Automatic Ground Throw Stand

Design No. 4

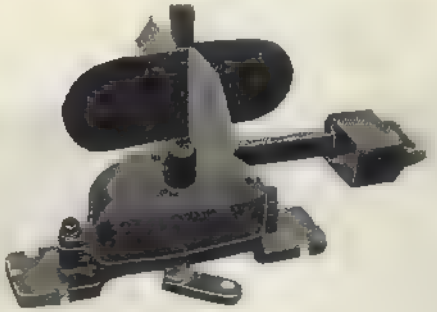

Fig 67

For yard purposes where target stand is desired, we recommend this pattern

Lever throws parallel to the track working parts are enclosed, therefore not affected by snow or dirt

When not locked is automatic

Fig 68

Plantation Switch Stands

Design No 2

Where a design of stand is desired for this light work, showing a medium high target same is shown by illustration.

Switch Stands

We illustrate various designs of switch stands covering needs of industrial tracks or standard lines.

Bearings are all bored, and shafts turned.

Connecting rods for all designs are forged from solid bar without welds

Our standard throw is 5-inches. Will furnish such throw as may be desired

Ground Throw Switch Stand with Target

Design No. 9

Fig. 69

Where a lower price target stand is desired, we offer this design. The target is set low for yard purposes

Fig. 70

Steel Forged Rail Brace

Design No. 3

Rail Braces

Forged from new steel plate and fitted for the section wanted

Design No. 3 shown is intended for rails from 30-pound to 70-pound rail

Design No. 4, with all spike holes enclosed, for rails from 75-pound upwards

The section of rail for which these braces may be wanted should always be given

Fig. 71

Main Line Switch Stand

Design No. 6

This design is to be used on two ties, and the shape makes it unusually strong

Ground Throw Switch Stand

Design No. 1

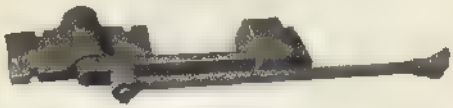

Fig. 72

All bearings are reamed shafts turned, making perfect fit of parts Lever is well weighted

Mine Switch Stand

Upright Lever, Parallel Throw (Automatic)

Design No. 21

Fig. 73

Where a stand is desired for operator to throw while car is in motion, this design is offered Car trailing through the switch set in wrong direction will throw switch over automatically Lever throws parallel, requiring but minimum space

Ground Throw Switch Stand

Design No. 3

Fig. 74

This design is intended for rails for 45-pound switches and upward Heavily weighted lever with handle grip

Solid Crossing 90°

Design No 2

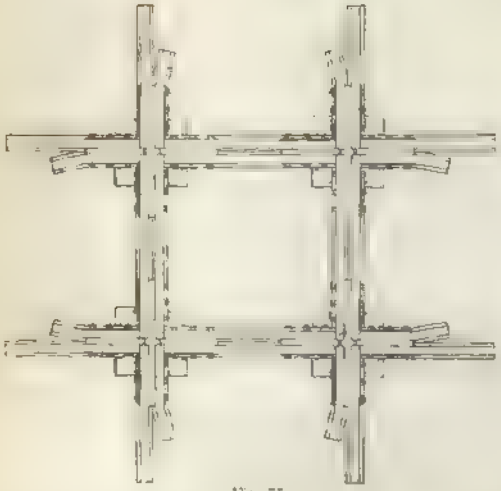

Fig. 75

Railroad Crossings

Design No 2

For all angles above 30 degrees, and for a crossing of medium price we offer the above design. Main and guard rails where heaviest traffic crosses are made continuous

Rolled steel filling, fitting accurately the stock and guard rails, heavily bolted, and fitted with nut lock and cotters; heavy corner straps at all intersections

Steel base plates furnished, when desired

No joint at centers, ends taken off to facilitate shipment

Switch Fixtures

Fig. 76

When a stub switch is to be used, we show by illustration our standard riveted tie bars and head chairs.

With these, to form a complete set either the Ground Throw Designs 3 or 9, and the Main Line Stand, Design No 6, can be used

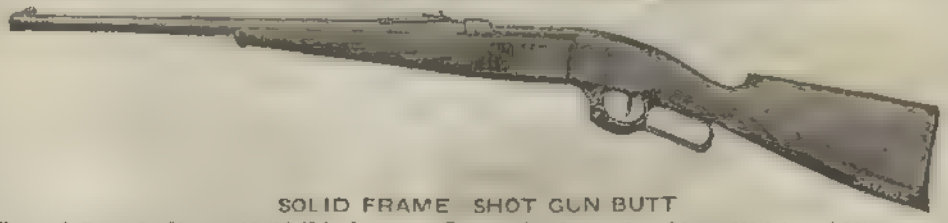
REPEATING RIFLES

SAVAGE

MODEL 1899—SPORTING

26 Inch Barrel; Hammerless; Plain Trigger; Blued Frame; 6 Shots

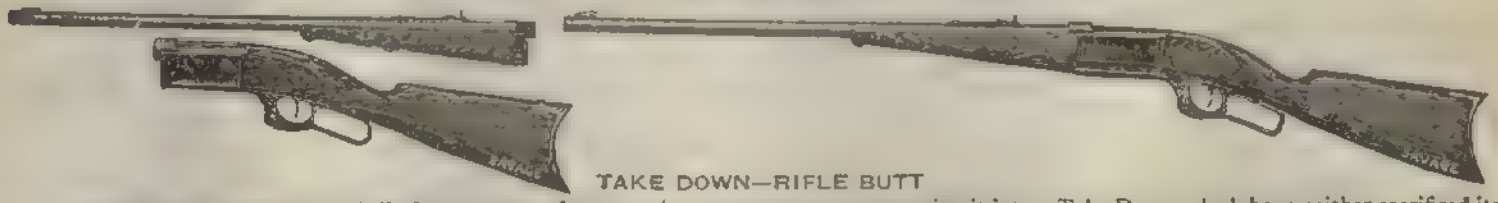
Construction is simple and always reliable. Special "Hi Pressure" Steel Barrel. Automatic revolving interlocking magazine in which the cartridges lie side by side, groove pulled to the grain of the wood; safety device is so placed that it does not necessitate unnecessarily changing, as it is the case with tubular form of magazine. Has hammer interlocker and positive safety locks both firing mechanism and lever.



SOLID FRAME SHOT GUN BUTT

	Each
No. S13030— 30 Caliber; Round Barrel; Shoots 30 30 Winchester or Savage Smokeless Cartridges; Weight 7½ lbs	$43 20
No. S1303 303 Caliber; Round Barrel, Shoots 303 Savage Smokeless Cartridges; Weight 7½ lbs.	43.20

One in a Box



TAKE DOWN—RIFLE BUTT

Contains same features as the Solid Frame except for a few changes necessary in converting it into a Take Down, which have neither sacrificed its Strength nor Durability.

NOTE.—We Cannot Furnish this Rifle in any Other but Round Barrel. It has a Very Simple Take Down Arrangement; Can be Taken Down as Readily as a Shotgun. When the Rifle is Assembled and the Fore-end in place, the Barrel and Receiver are Locked Securely Together.

SINGLE SHOT RIFLES

SAVAGE

MODEL 1904 "JUNIOR" TAKE DOWN

18 inch Round Barrel; Straight Grip American Walnut Stock; Shotgun Butt.

The Loading Feature of this Rifle is Easy and Simple. Simply Drop a Cartridge into the Receiver and Close the Arm. This Automatically Cocks the Rifle. After Cartridge has been Fired the Opening Movement Again Automatically Ejects the Empty Shell.

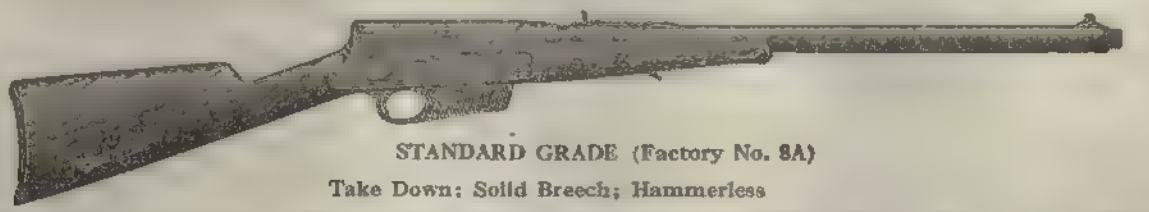
Designed after the Latest Military Bolt Action Rifles. Shoots three Lengths of Cartridges in the Same Chamber. Is a Hammerless, Take Down Single Shot. **Loads Easier and Ejects Quicker than any other Rifle Sold at the Same Figure.**

	Each
No. S22JR —22 Caliber; Shoots 22 SRF, 22 LRF and 22 Long Rifle Cartridges. Weight about 3 lbs	**$8.80**

Each Rifle Packed in a Partition Box with Cleaning Rod; Ten Rifles in a Case; Weight of Case 50 lbs.

REMINGTON AUTO-LOADING REPEATING RIFLES

A Simple "Take Down" System Permits this Rifle Being Taken Down and Put Together Easily and Quickly. Provided with a Box Magazine and Designed so that the Magazine Can be Charged by Use of a Cartridge Clip. The Clip is Filled by Inserting Each Cartridge Separately in Either End of Clip, at the Same Time Pressing Spring to Allow Flange on Sides of Clip to Intersect the Groove in Head of Cartridge. The Cartridges are Slid into Clip until Full. Magazine Can also be Loaded Without Aid of Clip. Empty Shells are Ejected From Top of Receiver by a Spring, Throwing them out Softly and Surely. The Bolt Remains Open After the Last Cartridge in the Magazine Has Been Fired, Notifying the Shooter that the Arm is Empty. Prevents Snapping the Hammer when there is no Cartridge in the Chamber and also Saves the Time of Opening the Breech by Hand. This Arm Can also be Fired Repeatedly as a Single Loader with the Magazine is Empty. Extra Light Trigger Pull, from 1 ½ to 3 lbs., and has Balanced Trigger which Prevents the Arm from Jarring off should it be Accidentally Dropped while the Safety is Unlocked. The Safety when in a Locked Position Securely Locks Both the Trigger and Bolt.



STANDARD GRADE (Factory No. 8A)

SCREEN REPORTS FOR THE BOX-OFFICE

"The Hoosier Romance," Old Fashioned Love Story, Will Appeal to All

Five-Part Drama produced by Selig Released by Mutual, August 18. Directed by Colin Campbell. Running time, 70 minutes.

THE C

Jeff Thompson .. .. Thomas Jefferson
Patience Thompson ... Colleen Moore
... Harry McCoy
... Edward Jobson
... Eugenie Besserer
The Widower ... Frank Hayes

... after the death ... her mother, carries on ... her father. Her one pleasure is ... and encourages an ...

... dd man, but her father's will is law. Just ... before her wedding John returns but Jeff will not allow Patience ... even speak to him. But Jue Squire and his wife let them meet ... at their house, and with John arrange a big surprise for the night of the wedding. Patience's sorrow is turned to joy when they explain the joke to her. As the wedding guests are gathered ... Thompson home and the widower stands waiting for his ... Patience comes in, takes her place beside the groom and ... as the ceremony is about to begin takes the marriage license ... and rushes from the room to the porch, and they hear the clatter ... of horses' hoofs down the road. Thompson and the widower rush ... out and start after the horse. But Patience runs back into the house into a room where John was waiting, and the Squire and his wife join them and the wedding ceremony is performed. Then they cross the guests and dance until sunrise while the two cronies are seeking the girl everywhere

THE feature is an adaptation of the poem by James Whitcomb Riley, and is an old fashioned love story of the time of our great grandmothers. A clean, simple love story which makes one give a sigh of relief and wait for many more like it, after we have been satiated with "vamps" and "spicy scenes." Its very simplicity is refreshing.

The direction is splendid, and not for one minute do the settings and action deviate from the small town life of a generation or two ago. You wonder where they found the old-fashioned house, a faithful picture of the old-time darkened parlors with the haircloth furniture, ... and wax flowers under glass domes, and the women wearing hoop skirts and pantalettes

The exterior scenes are things of beauty ... themselves, each one a pastoral view of spring and young budding life. The scenes were shot in the springtime amid orchards full of blossoming trees, and others in the farmyard, with the cattle and small calves and chickens all carrying out the rustic atmosphere of the picture. Although the action in the first of the picture moves rather slow-y, being made up mostly of the meeting of the young people, it does not seem raggy because of the beauties of nature surrounding them

Many comedy touches have been introduced to keep the story from becoming too idyllic, and at the end the action becomes so fast that you have to keep close watch not to miss any of the fun

The cast is a notable one, Colleen Moore fitting perfectly into the gentle heroine role. Thomas Jefferson, who plays the role of the flint-hearted father, is the son of Thomas Jefferson of "Rip Van Winkle" fame. Harry McCoy and Frank Hayes will be remembered in many Keystone comedies, and in the character role of the widower Hayes brings in many of the old Keystone ... touches.

This picture may not appeal to those who are pleased only with lurid drama, but it is one which everyone in ... , from the white-haired grandmother to the young people, will enjoy B. B.

"The Clutch of Circumstance" Unusually Good Picture—Director and Star Score

Blue Ribbon Photodrama in Five Parts From the story by Leighton Graves Osmun. Directed by Henry Henry. Released through Vitagraph on August 26. Running time, about one hour.

THE CAST

Ruth Lawson ... ... Corinne Griffith
John Lawson ... Robert Gaillard
Rudolph Raybu ... David Herblin
Lorry Williams ... Florence Deshon
Jack ... Denton Vane
Mrs. Lawson ... Esta Banks

Ruth is the wife of a former ... in a staid old New England village. Her husband, John, has become involved in debt. One evening he goes to a neighbor to attend to a message. His horse runs away and John is seriously ... To keep the matter ... ment. On the trials she meets Lorry Williams and other members of a theatrical troupe. Lorry promises to help Ruth should she ... it. Ruth secures employment in a sweat shop but her health ... th mistakes ... ces. She goes back to John who has recovered but he has ... ces about her since never and although she has worked for him at all times, he turns her out. She returns to New York where she is soon connected of the lowest type of the producer.

WILL wonders never cease? We never expected to see a photodrama in which a young girl gets a job on the stage, is made a star—but by a theatrical manager who does not attempt to seduce her. Now along comes Henry-Henry with this Vitagraph feature. He gently leads up to the familiar situation and then—he just lets you forget it for awhile, all the time in doubt as to whether or not the theatrical manager has really demanded his price, and we finally learn that no such thing happened, that the manager was really sincere and actually loved and wanted to marry the girl. This one fact in itself ought to be enough to stamp this feature as out of the ordinary, but there are several other things that place it in the worth while class.

If anyone had the idea that Corinne Griffith could not handle an emotional role, all he will have to do to experience a change of mind is to see this film. In it, Miss Griffith demonstrates her ability as she has never done before and registers a decidedly artistic performance. Robert Gaillard likewise does a praiseworthy work, while the rest of the players have been well, cast.

Director Henry Henry has done his work well. He has succeeded in sustaining the suspense until the very last, and by cleverly introducing little bits of business, managed to bring out the high lights of the story forcibly. The photography and lighting are fully up to the Vitagraph standard, while all sets and locations are more than satisfactory. In addition to this the story is a good one and well told on the screen

"The Clutch of Circumstance" is a thoroughly good program feature of the sort that ought to go over well in all classes of theatres. R. W. B

"The Honest Thief"—(Produced by Astra Film Corporation Photoplay in two parts. Story and ... Frank Leon Smith. Directed by George B. ... turing Hedda Hopper and Ed. Stanley. Released by Pathé.)—This picture has as much merit in it as some five-reel features and is really a condensed feature film, ... both story and presentation. It is interesting, well acted and will make a good box-office attraction for a double program. Edith Marbury (Helen Chadwick), a bank cashier, succeeds in recovering the proceeds of a bank robbery from under the noses of the robbers and returns it to the bank. Her lover, Chuck Severance (Ed Stanley), is the bank detective and leader of the band of robbers and the mystery as to whether he is playing the part of a robber or detective is not solved till the end.

REMINDER Page 1070 is the high water mark of Box office ...

"Our Mrs. McChesney" Splendid Comedy Drama—Ethel Barrymore Scores

Metro Photodrama in Five Parts. From the Saturday Evening Post story by Edna Ferber and the stage play by George V. Hobart. Directed by Ralph Ince. Photographed by William Black. Produced under the personal supervision of Maxwell Karger. Running time, about 55 minutes.

THE CAST

... ... 'thel Barrymore
T. A. Buck, Jr ... Huntley Gordon
Jack McChesney ... Wilfred Lytell
Vieva Sherwood ... Lucille Lee Stewart
Abel Fromkin ... John Daly Murphy
... William H. St. James
... Walter Percival
Hattie Stitch ... Rocca Allen
Joe Grossbaum ..... George Trimble
Izzy Greenbaum ... .Sammy Cooper
Sam Harrison ... ... Fred Walters

Mrs. McChesney is the star saleswoman of T. A. Buck and Co., the firm being run by Buck, Jr., with an outlook rather doubtful. Mrs. Mac is on the road and tweets her son, who is in college at Sandusky where she learns that he has not only married but raised a check his mother had sent him. Mrs. Mac sends her son's wife, a chorus girl, to a finishing school and Jack takes a job with the firm. Trouble a rival to the suit business, has made Mrs. Mac up after which she turns down and she then undertakes to run the Buck business. She designs a new skirt to be shown at the fashion show. The model fails ill but the chorus girl was takes her place. The skirt develops into a success, the business is saved. Jack, the son, develops into a real man, the wife into a real woman and Mrs. Mac seems destined to wed T. A. Buck, Jr.

THIS is a bully good comedy drama that is sure to make a good impression wherever shown for it has been produced and acted in just the right way to bring out the delicious humor of Miss Ferber's famous stories and good judgment was used when sub-titles were made up word for word as they were written by the author

The past week at the Strand Theatre, New York, "Our Mrs. McChesney" has been doing good business, keeping large audiences in good humor throughout its showing and registering a real hit. It received undivided praise at the hands of the New York newspaper critics.

Ethel Barrymore repeats the big success she made of the same role on the speaking stage. Her "Mrs. McChesney" is decidedly one of the very best characterizations that this well loved actress has given to the screen and her many admirers will find much to praise in her latest photodramatic triumph. Members of the large supporting cast all add very materially to the success of the picture, it being a noticeable fact that they appear to strive for the general effect rather than for individual glory

The direction of Ralph Ince could hardly be improved upon. There are some remarkably good examples of photography constantly being shown and the lighting is of high quality throughout. The atmosphere of the ... and of the business office has been well injected into the screen story which, by the way, is one of the best that has been filmed in some time

There seems no good reason why "Our Mrs. McChesney" should not make a big name for itself at theatres throughout the country, for it has all the elements necessary to a good photoplay. Those exhibitors who book Metro pictures can look forward to this release with a great deal of satisfaction. R. W. B.

"The Liar" Only Fair Medium For Virginia Pearson's Abilities

Fox Photoplay in Five Parts. Released August 18 by Fox. Story by Katherine Kavanaugh. Director, Edmund Lawrence. Running Time, 60 minutes.

THE CAST

... ...

Sybil is sought in marriage by the scheming manager of her father's plantation. When the girl repulses him and tells him she is to marry another he confronts her with the [illegible] has negro blood in her veins. She refuses to believe him but remains firm when she is about to become a mother he confesses her with what is seeming proof. A crippled negro boy whom Sybil had befriended tells her father's position and when her father had given a regular allowance to, confesses that he is her brother. Sybil is [illegible] upon the arrival [illegible]

THE heroine of this picture is made to believe by an unscrupulous lover that she has a negro blood in her veins. We are shown from the beginning that she hasn't, so the suspense is only a matter of waiting to see how long before she learns the truth. Racial problems are to be found plentifully on the stage, screen and in fiction. They are always the basis for rather unpleasant stories, and that this heroine has only an imaginery obstacle to overcome hardly places the picture in a different category.

Virginia Pearson is not especially well cast as Sybil Houston. She is seen throughout the picture with her hair down her back, romping around with a group of callow youths who might not yet be out of High School. There seems to be something so forced about the scenes wherein the villain tries to coerce her into believing that she is the daughter of a negress that they do not make a vital appeal. The villain journeys from Porto Rico to Boston for the week-end in order to threaten her—a rather ambitious trip.

The company has been well chosen, the work of Alexander Franklyn as the father being particularly effective. Frankyin Harvey is adequately vicious as the villain. In matters of production the picture is satisfactory, some views of beautiful estates being shown. For patrons who crave stories with sensational themes and who enjoy seeing a heroine hounded throughout the five reels, this picture will prove to be just the thing.

"Har Only Way" One of Norma Talmadge's Best Photoplays

Select Photodrama in Five Parts. From the stage play by George Scarborough. Scenario by Mary Murillo. Directed by Sidney Franklin. Photographed by Albert Meese and Ed. Weynard. Released on August 18 through Select. Running time, about sixty-five minutes.

THE CAST

Lucille Westbrook .	Norma Talmadge
Joseph Marshall	Eugene O'Brien
Paul Belmont .	Ramsey Wallace
Judge Bates	E. A. Warren
Mrs. Randolph	Johyna Howland

Lucille in love with Marshall has come home from school after returning from board school she learns that plans have been made for her to wed a wealthy man because her fortune has been lost as Marshall, feeling that she will be swept away by the glitter of social life, denounces her though she is given everything she asks for from boating lover Lucille's husband divorces her and she elopes with Belmont. But that throws [illegible] a dream. Lonely wishes to find Belmont there for Lucille [illegible] she refuses him and accepts Marshall.

THE scenario writer, author and director have all combined to give Miss Talmadge one of her best photoplay attractions in this offering. The star is always the central attraction, a point too often overlooked in the big productions and Miss Talmadge will find no action all her ability, as she moves from comedy into tragedy, and back again, always registering strongly. At moments Miss Talmadge eclipses her previous efforts, this being particularly true of the drama tragedy, one of the strongest seen ever filmed and for which much credit must be given the director

"Her Only Way" is an attraction that should make itself felt at the box office, and decidedly so, for it offers a good story and a very popular star It is the sort of offering that ought to be booked by exhibitors, for it proved last week at the Rialto Theatre, New York City, that it has a feature of undoubted merit and a picture that could be depended upon to get the business

In addition to the star, Eugene O'Brien puts over one of his usual fine performances, while Ramsey Wallace has been well cast. Johyna Howland makes an excellent "opposite type" to Miss Talmadge, and does her work well. E. A. Warren is unusually good as Judge Bates.

The settings are lavish, and the exteriors unusually accord with the story Photography and lighting are very good

Admirers of Miss Talmadge will find her in one of her best roles. From first to last "Her Only Way" is a feature of the highest class.

"The Power and the Glory" Appealing Melodrama—June Elvidge Star

World Photoplay in Five Parts. Released September 2. Story by Grace MacGowan Cooke. Scenario by Hamilton Smith, and Harry Hoyt. Director, Lawrence C. Windom. Cameraman, Max Schneider. Running time 58 minutes.

THE CAST

"Jonnie" Consadine .	June Elvidge
Laurella Consadine	Risca Allen
Deanie	Madge Evans
Pros Passimore	Albert Hart
Shade Birkhead	Clay Clement
Pap Rimes	Ned Burton
Gray Stoddar	Frank Mayo

Jonnie Consadine lives in the Blue Ridge Mountains with her widowed, two brothers and sisters. Pros Passmore, her uncle, is continually searching for a lost silver mine. Jonnie gets a job in the mill at Cedarville. She becomes acquainted with Gray Stoddard, part owner of the factory, and Layla Sessions, who hopes to marry him. Stoddard takes an interest in the girl, helps her books and tries to improve her mind. Shade Birkhead, a town hand, wants to marry Jonnie. Stoddard builds a hospital at his own expense, [illegible] a mountaineers and mill hands can be treated. He incurs the enmity of a family known as the "fighting Dunsons." Pros Passmore finds the mine, but Birkhead takes the ore specimen away from him and in the struggle the old man is injured and taken to the hospital, unconscious. In league with the Dunsons, Birkhead besieges Stoddard and makes the near the mine Jonnie, who is deeply hurt because her mother has married again, and set the child down to work, tracks Stoddard, in company with her uncle. They find him and escape in an auto. Stoddard realizes that he loves the girl and proposes marriage to Jonnie and her uncle.

THE trials and tribulations of "Jonnie" Consadine, as portrayed by June Elvidge, are woven into a very appealing melodrama, with plenty of heart interest; romance runs riot and with villainy defeated and virtue triumphant at the finish the picture can safely be said to hold a popular appeal

Miss Elvidge performs very credibly as the mountain maid of virtue, although her stately height and physical proportions do not always convey the appeal of need of the protection of a strong male arm. Gray Stoddard, as portrayed by Frank Mayo fills the lover role admirably, and adequate support is given the principals by the competent cast.

The Southern atmosphere is well developed and preserved. Striking views of forest, water and mountains are caught by the camera and numerous clever long shots are in evidence. The feature ranks as a fairly good box office attraction, well worth the attention of exhibitors.

"Heart of the Wilds" Sure Fire Attraction—Elsie Ferguson Star

Artcraft Photodrama in Five Parts. From Edgar Selwyn's play "Pierre of the Plains," from the novel by Sir Gilbert Parker. Scenario by Charles Maigne. Directed by Marshall Neilan. Released through Paramount on Sept. 1. Running time, about 58 minutes.

THE CAST

Jen Galbraith.	Elsie Ferguson
Peter Galbraith	Joseph Smiley
Val Galbraith.....	Robert Cain
Pierre	Escamalo Fernandez
Sergt. Tom Gellatly.....	Thomas Meighan
Grey Cloud.....	Sidney D'Albrook

Jen is the daughter of a trapper on the Canadian plains. Her father sells liquor to the Indians, Val, Jen's brother, and Pierre, friend of Jen's father, are both in love with her. Pierre is half breed girl despite the fact that she seems to prefer Sergt. Tom Grey Cloud, an Indian, is another who declares his love to Jen. Pierre and the Indian cook up a scheme to get Galbraith where he will shoot Grey Cloud and Val demands the liquor. Jen's father refuses to give it as providing Val will bring about his marriage to Jen and Val kills the Indian. Then Sergt. Tom is set on Val's trail. Tom visits the Post and while there Galbraith drags [illegible] to the proper officers. In her return Jen is unconscious, and she then learns that Val is a fugitive. Awakening she threatens to set out for the post to denounce him. Pierre returns and is embracing Jen when Val suddenly appears. A struggle of powerful picture arrives. Tom declares he must pursue and Pierre is denounced as the real murderer of the Indian

MARSHALL NEILAN has transferred Edgar Selwyn's play to the screen in fine style. The stage version of the "Heart of the Wilds" was a most attractive one and the picture adaptation is still more so because of the ability of the motion picture camera to film scenes that are not capable of being presented on the stage. "Heart of the Wilds" and Elsie Ferguson have a sure-fire box office attraction; a photodrama that combines a popular star, a fine story and a very excellent production

The past week at the Rivoli Theatre, New York City, this picture met with the decided approval of large audiences and received high praise from the reviewers of the Metropolitan papers.

Miss Ferguson is seen in a role that is distinctly different from those she has been playing of late. She handles the part of Jen, a typical girl of the great outdoors, with the same ability for registering dramatic situations that has made her name an envied one in the list of screen stars. Her work throughout could hardly be surpassed upon. Thomas Meighan is an hero, plays well and does his full share towards making a success of the picture, although he does seem a bit too neatly and carefully groomed for the rough job he is supposed to handle. Other members of the cast all fit in nicely and uphold their end of the work

Many charming and beautiful locations have been filmed. The interiors are in keeping with the nature of the story and the photography and lighting are both fully up to the high standard of Artcraft productions. "Heart of the Wilds" is the sort of picture that will help build up a real reputation for a theatre. It is a first class production all the way through.

"The Cruise of the Make-Believes" Acceptable Program Attraction

Famous-Lasky Photoplay in Five Parts. Released by Paramount. Story by T. Gallon. Scenario by Edith Kennedy. Director, George Melford. Running Time, Fifty-Five Minutes

Bessie Meggison...	Lila Lee
Gilbert Byfield ...	Harrison Ford
Daniel Meggison ...	Raymond Hatton
Aubrey Meggison..	William Brunton
Verbin Tant	Parks Jones
Simon Quarle	Spottswoode Aitken
Uncle Ed	Bud Duncan
Aunt Julia	Eunice Moore
	Mayme Kelso
Maid Cruise ..	Nina Byron

Bessie Meggison, a fanciful girl of sixteen, lives in the slums with her grandma (after the manner of the cockaigne), takes voyages on board of a ship rigged out of old chairs and canvas with a car wheel for steering to dream countries

Gilbert Byfield, a wealthy young man [illegible] stolen and, broken-hearted, returns to her humble home. But Byfield seeks her on board the good ship Make Believe and her dream of [illegible]

A RICH vein of mingled sentiment and comedy runs through this production which is prettily conceived smoothly developed and affords an artistic setting for the youthful grace and charm of Lila Lee in the heroine role The plot is a very simple one of no great strength, but carries a touching appeal, and considered in the light of what the title indicates, a sort of dream-like fantasy, will doubtless please highly those numerous screen patrons who find pleasure in the unfolding of a tender romance

A striking contrast is offered by the squalid surroundings of Bessie's humble home and the magnificence of the Byfield estate, where she reigns temporarily like a little queen over a retinue of servants and displays generous hospitality to the kiddies of the slum neighborhood. The play is effectively staged and directed and no expense spared in its construction down to the smallest detail, the furnishings of the Byfield residence being especially elaborate and luxurious

The photography is exquisite, the garden views of the country Paradise to which the girl of the slums is transported being extremely beautiful and the lighting faultless Lila Lee gives a commendable performance in the leading role and Harrison Ford is a perfectly satisfactory lover while good support is rendered by the balance of the company. The picture does not lack action, with its clean humor as a foil to the pathetic trend of the story ranks as a very acceptable program attraction. G. T. P

[illegible] ... [illegible] ... [illegible] ... [

"In Pursuit of Polly" Provides Billie Burke with Admirable Role

Famous Players-Lasky Photoplay in Five Parts. Released by Paramount. Scenario by Eve Unsell. Director, Chester Whitey. Running Time, Fifty-five Minutes.

THE CAST

Polly Marsden	Billie Burke.
Coley Mason	Thomas Meighan
Buck Marston	Frank Losee.
Talbot Sturgis	A. J. Herbert.
Larry O'Malley	Wm. Dyd son
Erik Kremer	Benjamin Deely
O'Leary	Alfred Hickman.

Polly Marsden, daughter of Jack Marsden, custom broker, is compelled by her father to choose between two admirers. O'Malley, a poet, and Talbot Sturgis, fabulously wealthy. Polly accepts Sturgis, but on the eve of the wedding she runs away from home and her father, who refuses to pay a penny of her debts. After various adventures, Polly does come down to a cabin occupied by Coley, a boyhood friend, and Larry O'Malley arrives in New York where after attracting the attention of Kremer, a Secret Service man, who believes that she is in the employ of the hated German spy, who believes that she is in the employ of the hated German spy, who believes that she is in the employ of Polly ends by Coley confessing her love for her and marrying her after she has straightened out her affairs.

QUICK action, wonderful photography and the charming personality of Billie Burke, combine to make this a very attractive feature. The role of Polly Marsden suits Miss Burke in every particular, her engaging smile is ever in evidence, and she gets around out the entire production with the energy which has won her international fame as a great comedienne.

The story as screened runs smoothly and holds the interest of the audience from start to finish. Whatever shortcomings the plot may contain are lost sight of in the rush of the comic situations that, follow swiftly upon each other and the element of suspense is maintained to a degree seldom seen in a comedy.

Thomas Meighan, as the lover of the winsome Polly, gives a capital performance. Larry O'Malley shines as a poetical genius of the first water, and the other members of the company render adequate support. Chester Whitey's direction is all that could be desired and the picture can be listed as a sure smash winner and a valuable program attraction.

"Fame and Fortune" Worthy of a Place on Any Exhibitor's Programme

Mutual-Fox Photoplay in Five Parts. Story by C. A. Seitter. Scenario by Bennett Cole. Director, Lynn Reynolds. Cameraman, J. D. Jennings. Running Time Fifty-Five Minutes.

THE CAST:

Clay Burgess	Tom Mix
Delia Bowen	Kathleen Connors
"Big" Dave Dawley	George Nichols
Judge Quinn	C. McHugh
Ben Davis	Jack Pull.
Marie Carson	Annette DePoe.
Flash Denny	Val Paoo.
Kuneen	L. N. Wallack
Sheriff of Palo	Clarence Burton

Love, hidden forces at work when Will and Burgess, banker in Palo, die, mysteriously, are united in their "big" boy Ben. The latter, on his return home to settle up business matters with his father's partner, is robbed of the money he would bring Bowen's young sweetheart, a fund raising entertainment for the benefit of the town. Ben, suspecting Clay Burgess of having stolen the money, starts in pursuit of the latter, who, with Delia Bowen and Flash Denny, escapes to Palo.

TOM MIX performs some amazing stunts on the way of wild horsemanship and desperate fighting as the gal bant hero of the picture. The Western atmosphere is well developed and preserved throughout the picture, which is all one of rapid action from start to finish.

Kathleen Connors is seen to charming and fully equal to the emotional demands made upon her in the role of Delia Bowen.

A thoroughly competent cast renders adequate support to the principals, and from beginning to end the feature worn and holds the attention of the audience.

The photography includes a number of fine mountain and forest views and cleverly posed "closeups." It is well directed and worthy of a place on any exhibitor's program.

Silver's No. 24 Self-Feed Post Drill

With Ball Bearings and Intermediate Gear

Fast or Slow Speed

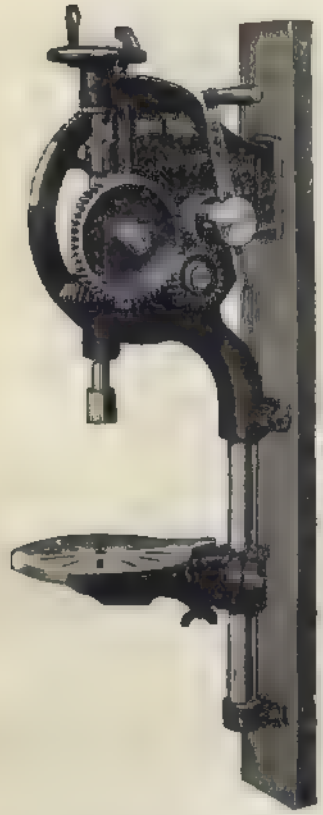

Fig. 1482

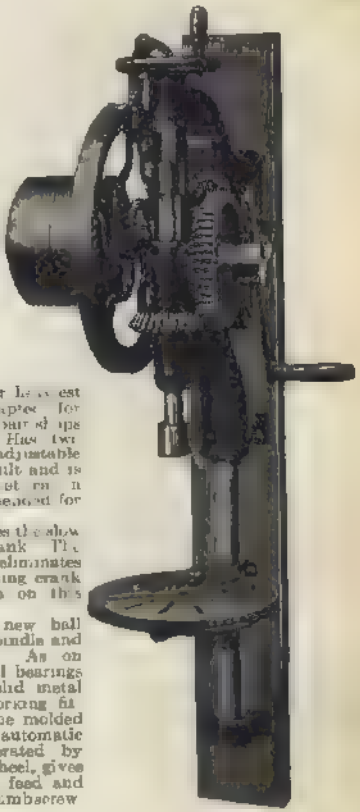

Fig. 1483

Strong and rigid for heaviest [illegible] drilling. Adapted for use in shops, repair shops, [illegible] and garages. Has two speeds, self-feed, adjustable [illegible] well built and is durable. It is easy to run, is [illegible] and is recommended for all kinds of drilling.

Fig. 1482 illustrates the slow speed position of crank. The intermediate gear eliminates the necessity of turning crank the reverse direction on this speed.

Equipped with new ball bearing feed nut. Spindle and shafts are of steel. As on high priced drills, all bearings are bored out of solid metal and reamed to a working fit. Perfect mesh machine molded gears are used. The automatic feeding device, operated by cam inside of gear wheel, gives nearly a continuous feed and can be regulated by thumbscrew.

Dimensions. Size of spindle, [illegible] inches; [illegible] spindle [illegible] inches; [illegible] common [illegible] inches; greatest distance of spindle to table, [illegible] inches; spindle turns [illegible] times to 1 turn of crank on fast speed; crank turns [illegible] times to 1 turn of spindle on slow speed; drills to center of 22 inch circle and up to [illegible] inch bar; [illegible] spindle bored for [illegible] inch shank drills, unless otherwise ordered; total weight 54 pounds; tight and loose pulleys measure 8 x 2½ inches. They should be speeded about 250 revolutions which will turn the spindle 170.

Sizes and Prices

Fig. 1482. No. 24, for hand use only, as shown, weight crated, 235 pounds	each $25 00
Fig. 1483. No. 24, for hand or belt power, weight crated, 240 pounds	each 29 00
Chuck for bit stock drills	each 1 00

Champion Post Drills

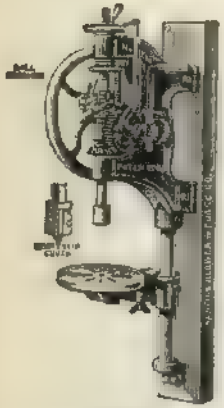

Fig. 1484

No. 200 Self-Feed and Double Compound Lever Feed Drill

No. 200. This drill has double back gears, two speeds, crank on the second speed turns in the same direction as the first speed, drills to center of a 16-inch circle. Spindle 1¼ inches in diameter and has an up-and-down run of 4 inches. Bored like Champion Patented Nevers up Chuck to take in ½-inch straight shank bits; if specially ordered, will be bored to take in ⅝-inch or ¾-inch bits. Drills holes up to 1¼ inches.

No. 203. Machine-cut double sliding back gears, which are changed in a moment for light or heavy work. The fly wheel spins on ball bearings at the bottom end of the shaft. All end friction is taken from the drill spindle by ball bearings. The self-feed is our latest design, gives bit cutting clearance, bores holes in the shortest time, less sharpening and longer life to the drill bit. It has a rack for raising and lowering the table and wheel hanger for drilling tires. Drills to center of 21-inch circle. Spindle is 1¾ inches in diameter. Has up-and-down run of 5½ inches. Bored like Champion Patented Neverslip Chuck to take in ¾ or ⅝-inch straight shank drill bits (if specially ordered, bored to take in 1-inch straight shank bits). Will drill holes up to 1⅜ inches.

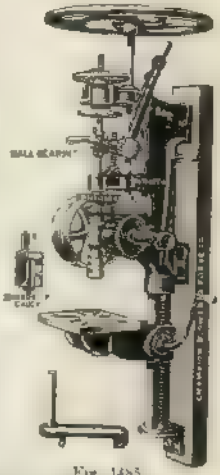

Fig. 1485

No. 203 Self Feed and Double Compound Lever Feed Drill

No. 200. Champion Self Feed and Lever Feed Post Drill, drills to center of 16-inch circle, weight 850 pounds ... each $25 00

No. 93. Champion Self-Feed Blackmon & Post Drill, with ball bearings, weight, 125 lbs. each 10 00
Extra, for power 3 00

Champion 14-Inch Upright Power Drill

Fig 1490

The 14-inch upright power drill is a gear driven drill. It combines the simplicity, speed and ease of operation of a sensitive drill with extreme power not usually found on drills of this kind. All beveled gears are planed. The bearings are large and powerful, the upper bearing being split to take up wear when necessary. The spindle made of high carbon steel is graduated, ground and fitted throughout with ball bearings, and is counterbalanced by a weight in the hollow column. The table is tilting and can be clamped permanently at any angle.

Number 14 inch, style of base square, drills to center of circle 7¼ inches, diameter of spindle, ⅝ inch, size of belt on cone pulley, 1½ inches, size of driving pulley, 7 x 2½ inches, speed of driving pulley, 225 r. p. m., weight 490 pounds.

Price..... each $70.00

Champion Power Bench Drill

For Light and Rapid Drilling

Dimensions

Drills to center of a 9-inch circle, bores holes up to ⅜ inch in diameter, up and down run of spindle 3¼ inches, up and down run of table 9 inches, greatest distance from table to spindle 10 inches, greatest distance from planed base to spindle 16 inches, diameter of column 2½ inches, size tight and loose pulleys 4 x 1¾ inches, size of large cone pulley 4½ x 1½ inches, size of small cone pulley 3 x 1½ inches, spindle is bored with No. 1 morse taper hole, height 32 inches, weight 80 pounds..... each $30.00

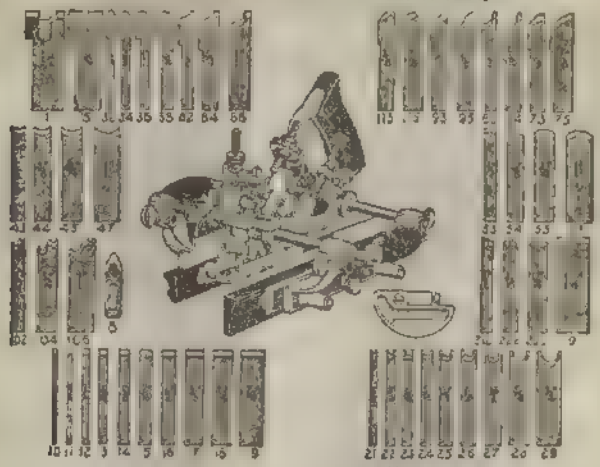
COMBINATION PLANES



STANLEY "FIFTY FIVE" PLANE

This Tool, in addition to being a Beading and Center Beading Plane, a Plow, Dado, Rabbet, Filletster, and Match Plane, a Sash Plane and a Slitting Plane, is also a superior Moulding Plane, and will accommodate cutters of almost any shape and size. In fact, it is **"A Planing Mill Within Itself."**

The regular equipment sent with the Plane compriaes fifty-two cutters, all of which are shown in the cut. These cutters, together with the Plane and all its attachments, are packed in a neat steel box.

All metal parts of the Plane are nickel plated. The handle and fences are made of selected rosewood, and every part is well finished

Each

No. 55—Nickel Plated; With 52 Cutters; Weight 15¼ lbs.....**$31.80**

Some Work of "Fifty Five" Plane

The samples of work illustrated, show some of the mouldings that can be made with cutters regularly furnished with this Plane.

When it is considered, that in addition to the fifty-two regular cutters and the forty-one special cutters, the plane will take practically any form of cutter desired, its wide range of work will be appreciated.

The Plane has: A Main Stock, "A", which carries the cutter adjustment, a Handle, a Depth Gauge, a Slitting Gauge, and has a Steel Bottom forming a bearing for one edge of the cutter. A Sliding Section, "B", with a steel bottom gives bearing for the other edge of the cutter and slides on arms secured in the Main Stock. This bottom can be raised or lowered so that, in addition to allowing the use of cutters of different widths, cutters can be used having one edge higher or lower than the edges upported in the Main Stock. An extra support or stop is necessary for cutters which first enter the wood at a point between the outside edges, and is a benefit for such cutters which, if the Plane were accidentally tilted, would tend to gouge the work. The Auxiliary Center Bottom, "C", which can be adjusted for width or depth, fulfils this requirement. Fence, "D", has a lateral adjustment, by means of a screw, for extra fine work. The Fences can be used on either side of the Plane, and the rosewood guides can be tilted to any desired angle up to forty-five degrees, by loosening the screws on the face. Fence, "E", can be reversed for center beading wide boards.

The Plane is fitted with Spurs for working across the grain, and a special Cam Rest, to be located on the front arm when working at a distance from the edge of the board, to keep the Fence from sagging, or on the rear arm on certain work, to prevent the possibility of the Plane rocking. All parts are interchangeable.

The four small cuts in the corners, show how the bottoms should be set for different forms of cutters, and the great importance of having the Fences adjusted so that the cutters will not run.

✠EXTRA CUTTERS FOR "FIFTY FIVE" PLANE

The following cutters are furnished with each Plane. The price is given in case duplicates should be required.

COMBINATION PLANES

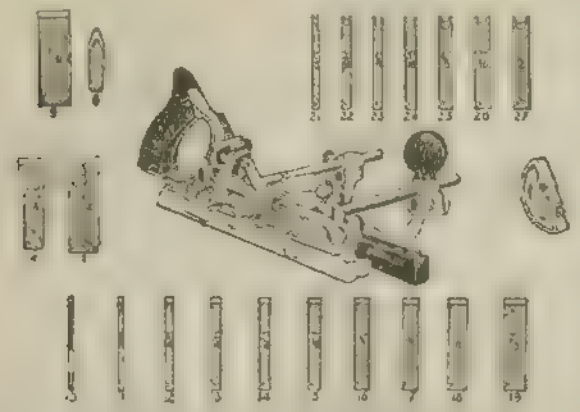
STANLEY

Plow, Beading and Matching

This is a very handy tool for light work. It consists of a main stock, carrying a spur and a depth gauge, and forming a support for one side of the cutter; a sliding section, carrying a spur and forming a support for the other side of the cutter, and a fence with a 5-inch adjustment. The handle is metal, being a part of the main stock. Each

No. 50—Nickel Plated Cast Iron; Length 9¼ inches; Fifteen Cutters, comprising 7 plow and dado bits, ¼, 5/16, ⅜, 7/16, ½, ⅝ and ¾ inch; 7 beading tools, ⅛, 3/16, ¼, 5/16, ⅜, 7/16 and ½ inch; and a ¼ inch tonguing tool; Weight 3½ lbs. **$8.50**

One in a Box.



STANLEY "FORTY-FIVE PLANE"

Seven tools in one in compact and practical form. 1—Beading and Center Beading Plane. 2—Plow. 3—Dado. 4—Rabbet and Filletster. 5—Match Plane. 6—Sash Plane. 7—Slitting Plane.

The Plane has two principal parts, a main stock and a sliding section. The main stock carries the handle, cutter adjustment, a slitting tool, depth gauge, and forms a bearing for one edge of the cutter. The sliding section slides on two arms secured in the stock and has a bearing for the other edge, allowing cutters of different widths to be used. A fence also slides on these arms for use when working as a plow, beader or filletster, to gauge the distance from the cutter to the edge of the board, and to keep the cutter at right angles to same. When used as a filletster, the fence slides under the bottom of the Plane and determines the width of cutter exposed to the work.

The Plane is fitted with spurs for use across the grain, etc., and can be used either right or left hand.

With each Plane are furnished twenty-one cutters, all of which are shown in the cut. The cutters, together with the Plane, are packed in a neat steel box.

All metal parts are nickel plated. The handle, knob and fence are made of selected rosewood. For beading at a distance from the edge of a board, attach cam rest (see cut at right of Plane) to the front arm between the sliding section and fence to prevent the fence sagging. In certain work attach same to the rear arm to prevent the Plane from rocking. Each

No. 45—Nickel Plated; With 21 Cutters; Wt. 9½ lbs. **$16 00**

One in a Box.

✣EXTRA CUTTERS FOR "FORTY-FIVE" PLANES

COMBINATION PLANES

✣SPECIAL BOTTOMS FOR "FORTY-FIVE" PLANE

In order to work Hollows and Rounds, or a Nosing Cutter in the No. 45 Plane, it is necessary to substitute, for the sliding section, specially formed bottoms which are called by the same name as the cutters they are designed to carry, that is: Hollows, Rounds or Nosing Tools.

A Hollow and its cutters will form a **Round** on the moulding being worked. A Round and its cutters will form a **Hollow.** A Nosing Tool and its cutters will form what might be called an exaggerated Round. It is very largely used for shaping the edges of stair treads. Hollows and Rounds are made in four sizes and are usually sold in sets, a set comprising one Hollow, one Round and two Cutters. The price of a Nosing Tool includes one Cutter. Per Pair

No. 6—Hollow and Round; ⅛ in. Cutters; Work ¾ in. Circle **$3 00**

No. 8—Hollow and Round; ⅜ in. Cutters; Work 1 in. Circle **3 00**

No. 10—Hollow and Round; ½ in. Cutters; Work 1¼ in. Circle **3 30**

No. 12—Hollow and Round; 1 in. Cutters; Work 1½ in. Circle **3 30**

Each

No. 5—Nosing Tool; 1¼ in. Cutters; Work 1¼ in. Circle..... **$2 50**

STANLEY

Bull Nose Plow, Filletster and Matching

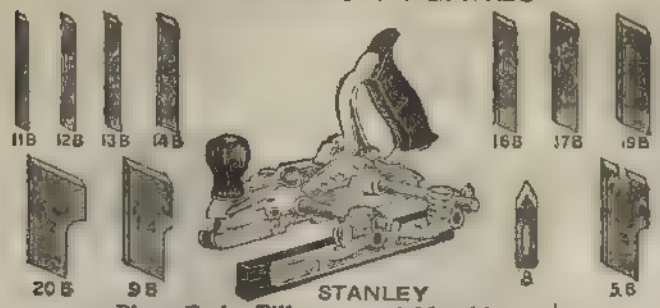
This Plane has two interchangeable front parts that make it either an ordinary plow or a bull nose plow. With the bull nose attachment the cutter will easily work up to and into a ½ inch hole or any large size as in sash fitting, stair work, etc. It consists of a main stock, carrying a spur, depth gauge, and [illegible] stock [illegible] plow cutters of different widths), a fence which can be set for either plow or filletster work, and a separate filletster bottom. Each

No. 141—Nickel Plated Cast Iron; Rosewood Handle; Length 9¼ inches; Eleven Cutters, Comprising 8 plow bits, ⅛, 3/16, ¼, 5/16, ⅜, 7/16, ½ and ⅝ inch; a 1½ inch filletster cutter; a ¼ inch tonguing tool, and a slitting cutter; Weight 5½ lbs. **$10 00**

One in a Box

Items Marked ✣ not Carried in Stock; Can only be furnished by shipping direct from Factory, New Britain, Conn.

COMBINATION PLANES



Plow, Dado, Filletster and Matching

Skew cutters are the feature of this Plane. It consists of a main stock carrying a spur, a depth gauge and a slitting cutter, a sliding section carrying a spur and forming an extra sole for the Plane, and a fence rosewood face, which can be set for either plow or filletster work

Each

No. 66—Nickel Plated Cast Iron; Rosewood Handle and Knob; Length 10½ inches; Eleven Cutters, Comprising 8 plow and dado bits, 3/16, ¼, 5/16, ⅜, ½, ⅝, ¾ and 1¼ inch; a 1½ inch Filletster cutter; a ¼ inch tonguing tool, and a slitting cutter; Weight 5¾ lbs..... **$11.00**

Dado

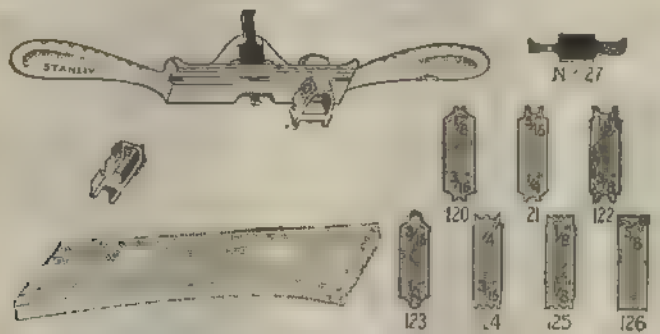
This is the main stock with spur, slitting tool, depth gauge and the sliding section with spur, used in Plane No. 46, but without the fence, and with fewer cutters.

Each

No. 47—Nickel Plated Cast Iron; Rosewood Handle and Knob; Length 10½ inches; Six Cutters, Comprising 5 dado bits, ⅜, ½, ⅝, ¾ and 1¼ inch; also one Slitting Cutter; Weight 3¾ lbs..... **$8.60**

One in a Box.

BEADING TOOLS



STANLEY UNIVERSAL; TWO-HANDED

This is an excellent tool for beading, reeding or fluting straight or irregular surfaces and for light routering. The sample illustrated shows some of the work that can be done with its use. With each beader are furnished a square guage for straight work and an oval gauge for curved work. There are also furnished eight cutters sharpened at both ends and embracing the following assortment, 6 single beads, ⅛, 3/16, ¼, 5/16 and ⅜ and ½ inches; 2 fluting tools, 3/16 and ¼ inches; 4 reeding tools, (2 beads 3/16 inch, 3 beads ¼ inch, and 3 beads ⅛ inch and 4 beads ⅛ inch), 2 routers ⅛ and ¼ inch, and a ⅝ inch blank, which latter cutter the owner can file up as he desires.

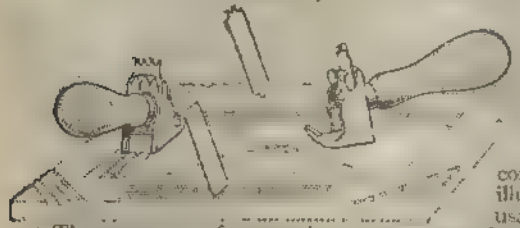
The handles are curved so as to insure ample room between the workman's hands and the surface of the work.

Per Dozen

No. 66—Iron, Nickel Plated; Length 11½ inches; Eight Cutters; Weight 1½ lbs. **$17.70**

One in a Box.

STANLEY; SINGLE HANDED



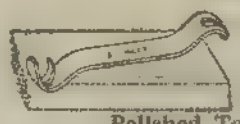
This is a very handy little article. With it one can do all kinds of straight beading, reeding or fluting. The sample of work shown in connection with the tool illustrates some of the usages to which it can be put. The assortment of cutters that accompany each tool, comprises single beads, ⅛, 3/16, ¼, 5/16, ⅜ and ½ inches, 2 fluting tools, 3/16 and ¼ inches, 4 reeding tools, (3 beads 3/16 inch, 2 beads ¼ inch, 3 beads ⅛ inch and 4 beads ⅛ inch), and a ⅝ blank.

Per Dozen

No. 69—Nickel Plated Metal Body; Maple Handle; Length 5 inches; Seven Cutters; Weight ⅝ lb..... **$16.50**

One in a Box.

CORNERING TOOLS



STANLEY

These tools are used by Pattern Makers and all wood-workers for rounding sharp edges. They have a different size cutter at each end and their form is such that no depth gauge is required.

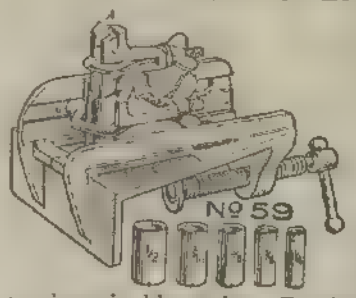
Polished Tool Steel; Length 5½ inches.

Per Dozen

No. 28—1/16 and ⅛ inch Cutter; Weight Dozen 1½ lbs..... **$5.00**
No. 29—3/16 and ¼ inch Cutter; Weight Dozen 1½ lbs..... **5.20**

Half Dozen in a Box.

DOWELING JIGS



STANLEY

This Tool is made for the purpose of enabling the user to Bore Dowel Holes in the Edge End or Surface of Work with the greatest Ease and Accuracy. It will Cut any thickness of Material up to 8 inches.

It also will be found an excellent Bit Guide for Mortising. When making Dowel Holes with the Doweling Jig the Steel Guide is Automatically Set to guide the Bit properly when the Jig is Clamped to the work as shown in Illustration. Furnished with Five Steel Guides 1¼ inches Long; One each ¼, 5/16, ⅜, 7/16 and ½ inch. To allow for Variations in Size of Bits the Guides are made 1/100 inch Larger than the Sizes given.

Each

No. 59—Nickel Plated Cast Iron Body, 6¾ inches Long; Weights each 1½ lbs..... **$3.70**

One in a Box.

DOWEL SHARPENERS

STANLEY

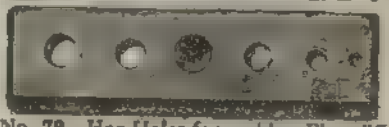
This Tool is the Reverse of the Countersink and can be Sharpened with equal Ease. By its use Dowel Pins can be Sharpened Rapidly and Uniformly.

Per Dozen

No. 22—Made of Malleable Iron; Nickel Plated; Sharpens Dowel Pins up to ¼ inch; Weight per Dozen 1¼ lbs. **$4.50**

Half Dozen in a Box.

DOWEL PLATES



Used for Making Wood Dowel Pins

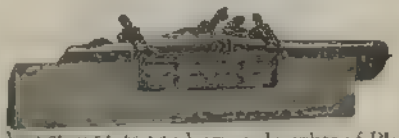
Made of High Grade Tool Steel; Full Polished and properly Tempered.

Per Dozen

No. 78—Has Holes for making Five different Sizes of Dowel Pins ¼, 5-16, ⅜, 7-16 and ½ inch Diameter; Size of Plate 6x1½x⅝ inches; Weight each ⅛ lb..... **$9.00**

One Dozen in a Box.

JOINTER OR PLANE GAUGES



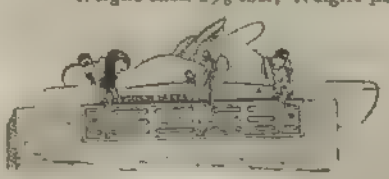
★*DIAMOND EDGE*,

Can be Adjusted to any Jack or Jointer Plane, Wood or Iron; Adjustable for Squaring or any Desired Bevel; Arms are Slotted to Provide Adjustment to the Various Heights of Planes, Quickly Secured or Released by Turning Set Screw in Slot and by a Partial Turn of Cam Lever.

For Wood Planes Substitute Round Head Wood Screws for Cam Levers.

Per Dozen

No. DE145—9 inches Long; Japanned Iron Clamp Bar and Cam Lever Clamps; Plain Nickel Plated Gauge Plate; Machined Planer Surface; Polished Nickel Plated Trimmings; Weight each 1⅛ lbs.; Weight per Dozen 22½ lbs..... **$36.60**



STANLEY ADJUSTABLE

This Jointer Gauge is designed for use in connection with all Sizes of Iron Jacks or Jointer Planes. Enables the Workman to Plane Bevels of any Angle between 30 and 90 Degrees or to Square up the Edges of Boards with extreme Accuracy. The Tool is so constructed that it may be attached to either Side of the Plane making it equally adaptable for Right or Left Hand Work. A Hole is Bored in each End of the Gauge so that a Wood Face of any desired Size may be attached, thus providing a Bearing Surface Longer or Wider than the Face of the Gauge itself.

Each

No. 886—Made of Malleable Iron Nickel Plated; Length 11 in.; Plain Nickel Plated Gauge Plate; Machined Planer Surface; Rosewood Knob forms a convenient Grip and can be placed at either end of the Gauge; Weight each 1¼ lbs.; **$3.00**

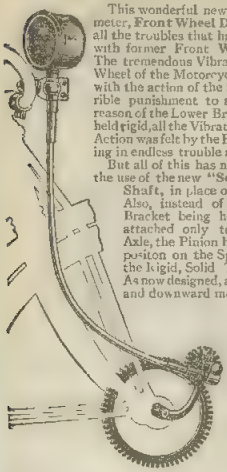
MOTORCYCLE SPEEDOMETERS

LID TUBE FRONT WHEEL DRIVE, MODEL 101

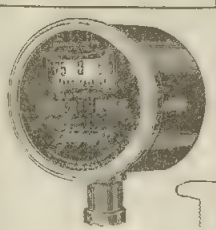
STEWART

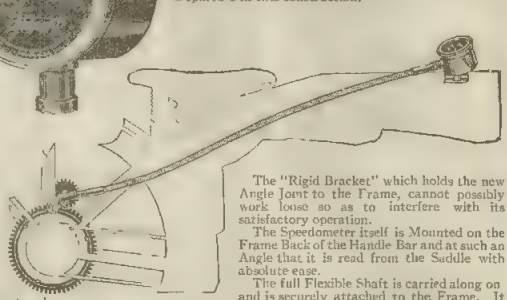
When ordering Motorcycle Speedometers; give make, model and year of motorcycle, also diameter of tire.



This wonderful new Motorcycle Speedometer, **Front Wheel Drive,** does away with all the troubles that have been experienced with former Front Wheel Drive Models. The tremendous Vibration that the Front Wheel of the Motorcycle receives, together with the action of the Spring Fork was terrible punishment to a Flexible Shaft. By reason of the Lower Bracket formerly being held rigid, all the Vibration Shock and Spring Action was felt by the Flexible Shaft, resulting in endless trouble and breakage.

But all of this has now been obviated by the use of the new **"Solid Tube" Driving Shaft,** in place of the Flexible Shaft. Also, instead of the Lower Bearing Bracket being held Rigid, it is now attached only to the Front Wheel Axle, the Pinion being suspended in its position on the Sprocket by means of the Rigid, Solid Tube Driving Shaft. As now designed, all of the "Whipping" and downward movement on the Fork is taken up by the Bracket working free on the Axle. Any downward movement of the Fork causes the Solid Tube to push the Pinion down slightly on the Sprocket. This virtually makes a free connection and all of the Vibration and Springiness that any Motorcycle will ever experience have absolutely no effect upon this new style of **"Solid Tube" Driving Shaft Equipment.**





Each

Model 101—Front Wheel Drive with 2½ inch Dial. **$14 00**
One in a Box; Weight about 12 lbs

REAR WHEEL DRIVE, MODE L101A

The most ruggedly built and equipped Motorcycle Speedometer made. Furthermore, it is more firmly attached than any other Motorcycle Speedometer in existence. It is absolutely unaffected by Vibration or Road Shocks.

Fastened to the Rear Wheel Hub is a big, Solid Case Sprocket, as strong as any part of the Machine. The Pinion being of Fiber, eliminates all Gear Grinding, as well as all the other noises which makes the ordinary Speedometer Drive so objectionable. The new Angle Joint, between the Pinion and the Flexible Shaft is a Stewart special design and is an entirely new Departure in this construction.

The "Rigid Bracket" which holds the new Angle Joint to the Frame, cannot possibly work loose so as to interfere with its satisfactory operation.

The Speedometer itself is Mounted on the Frame Back of the Handle Bar and at such an Angle that it is read from the Saddle with absolute ease.

The full Flexible Shaft is carried along on and is securely attached to the Frame. It cannot work loose and get in the Riders' way. It is never subjected to any Whipping or Twisting Strains. It is always in the best possible position for correct operation.

The illustration shows one method of attaching it to the Frame. Because of the difference in the Designs of Motorcycles, a special Bracket for each make of Motorcycle is made.

Each

Model 101A—Rear Wheel Drive with 2½ inch Dial **$14 00**
One in a Box, Weight 12 lbs.

BICYCLE CYCLOMETERS

VEEDER

Veeder Cyclometers are as Accurately Made as Watches, but Contain no Springs to Cause Trouble. They are Dust and Water Proof and Cannot Skip; Neither Can they Register too much. No. 0195 . . . . . **$36.90**

The "Beland" Track Drill

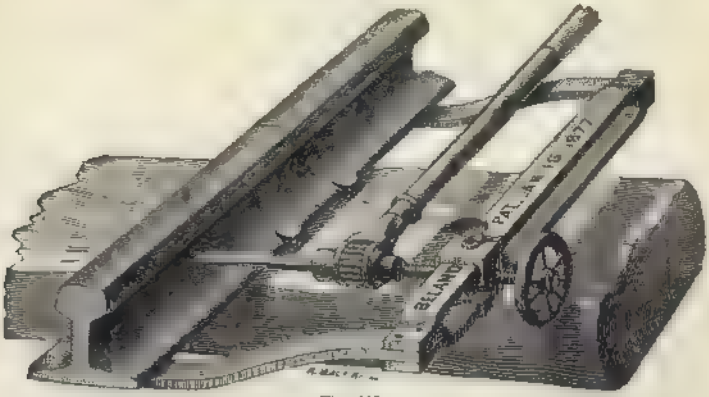

Fig 115

The "Beland" is the pioneer in the matter of track drills, and is so well known and universally used that we scarcely need to say a word in its favor.

To those wishing a thoroughly reliable hand feed drill, the "Beland" completely fills the requirements.

We still maintain the high standard of excellence as regards material and workmanship.

It is made of wrought and malleable iron and cast steel

Price.. ... .each $10 00

The "Underwood" Track Drill

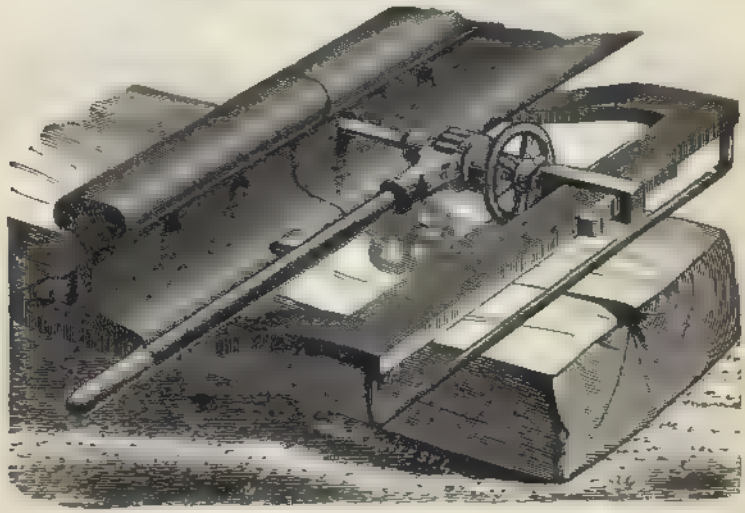

Fig 116

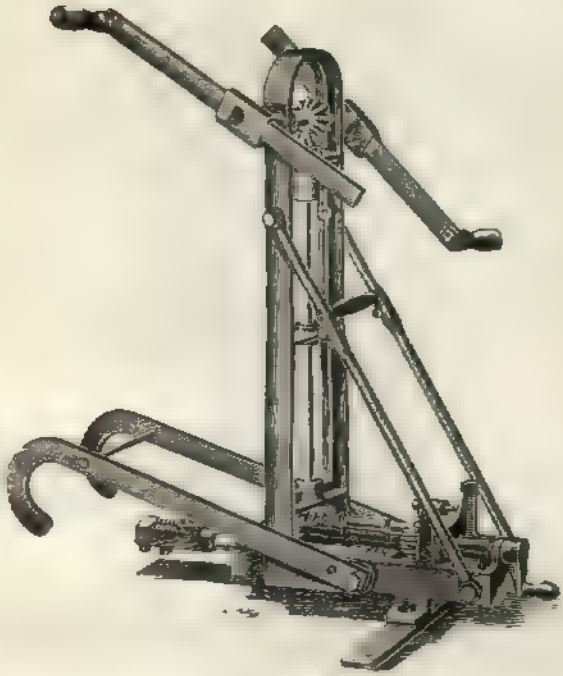
A hand feed drill, second only to the "Beland" in popularity and as widely known and used. As with our other tools, we use only such materials in construction as our long experience in the manufacture and sale of these tools convince us to be the best obtainable

Price.. ....each $10 00

Handlan Track Drill



Extra heavy, and with many new features, automatic feed, adjustable handles, improved bit chuck, less number of repair parts.

Price, equipped with Handlan High Speed Drill Chuck ..... each $30.00

Takes a flat beaded high speed steel bit. See page 347

AXES

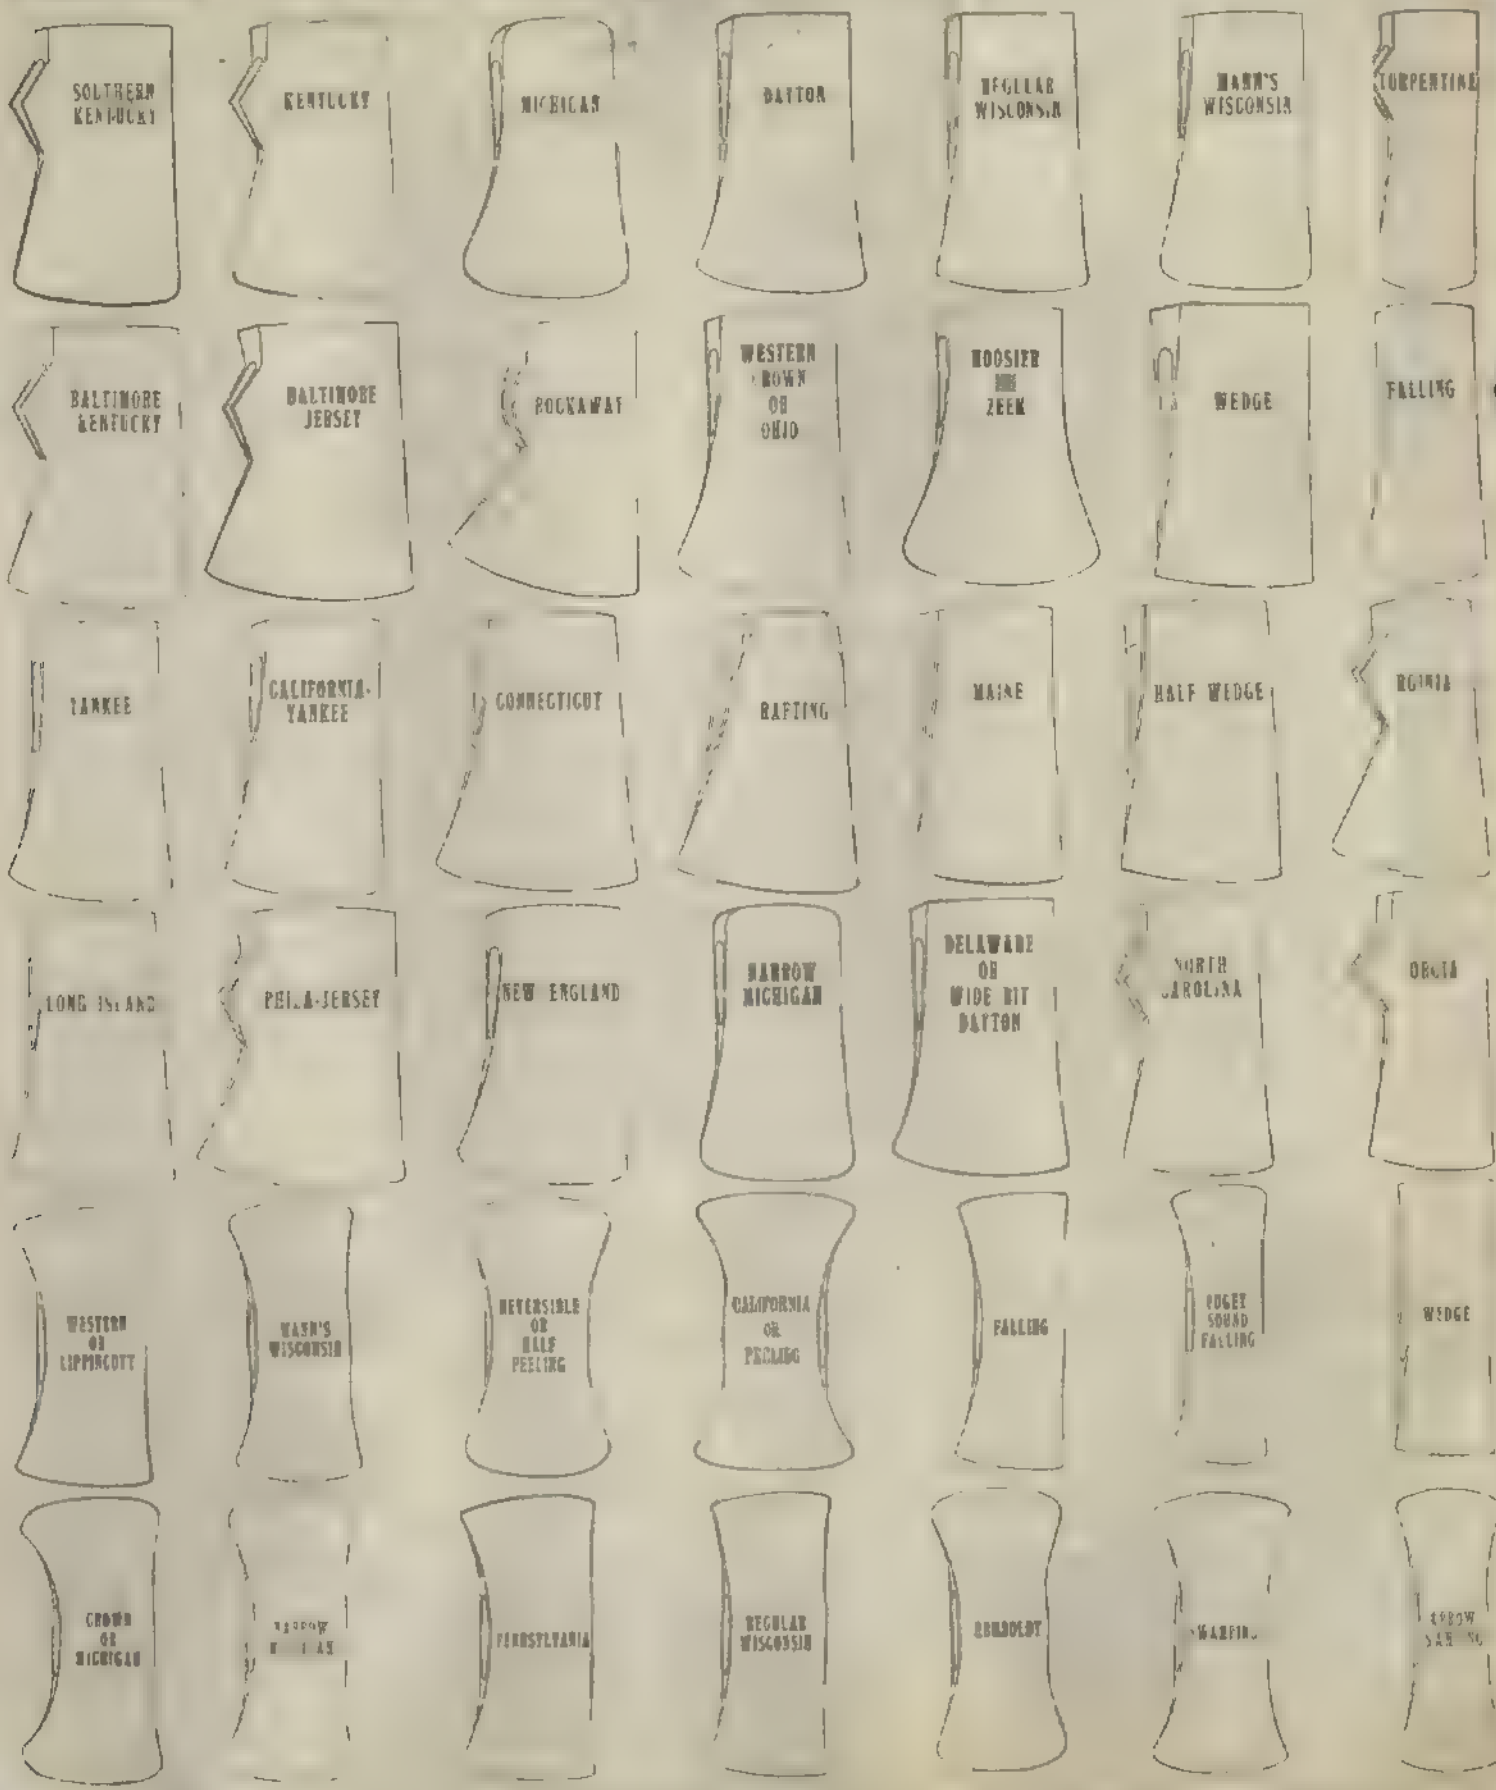
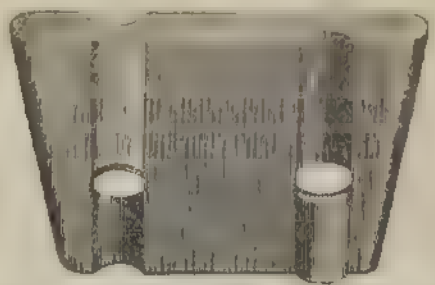
The Illustrations below show the Outlines of the Various Patterns of Axes. All of these Patterns can be Furnished in any of the Brands Shown on the Following Pages. Those Patterns and Brands which are Not Included with our Cataloged Brands for Stock Shipment [illegible] can be Furnished Only for Direct Shipment from [illegible]



DIAMOND EDGE AXE WEDGES

The *DIAMOND EDGE* Axe Wedge is Used by Us Exclusively in Handling Axes, because it cannot Work Loose from the Handle, but can be Driven Further In, Should the Wood Shrink.

We do not Sell These Wedges Alone.



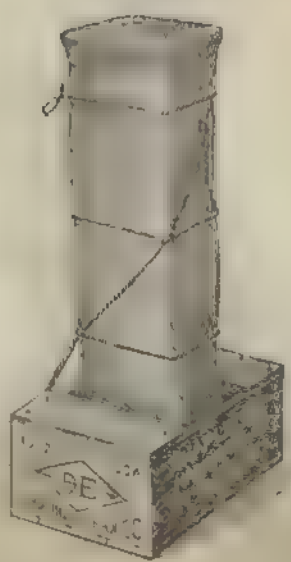
Cut Shows Wedge of Proper Size

The *DIAMOND EDGE* Axe Wedge is Used by Us in [illegible] Styles of Our Handled Axes (except the Falls City, which We Buy of the Factory Already Handled). Our Exclusive Brands as well as Manufacturers' Brands are Handled by Us in our Own Plant, and no other Wedge is Used.

The *DIAMOND EDGE* Axe Wedge Positively Prevents the Axe Flying Off the Handle. [illegible] Work Out, Be Driven Further In, Should the Handle Shrink. The Wedge Cuts [illegible] Presents the Wedge from Working Loose. This [illegible] Wedge [illegible] Axes Handled by Us [illegible] Axes Handled in Our Own Plant, and [illegible] Wedge [illegible] Axes Handled in Our Own Plant. [illegible] Wedge [illegible] Axes Handled in Our Own Plant.

Cut Shows Wedge Driven in Handle and Handle Pulled Open to Show Binding Effect Produced by Action of Wedge.

Cut Shows Handle Broken Open to Show the Two Round Slivers Cut by Wedge.



Cut Shows Crate of Handled Axes Put Up by Us for Shipment. All of our Handled Axes are Put Up in Crates of One Dozen. The Axes are Held Firmly and Securely in Place and do not Rub or Scratch Each Other. The Handles are Covered with a Heavy, Tough Fibre Paper Bag and Securely Tied, Protecting Them from Dust, Dirt, Water and Damage in Shipping and Storing

SINGLE BIT AXES

*DIAMOND EDGE PHANTOM BEVELED

Full Polished and Etched

DIAMOND EDGE Axes are Recognized as being the Best Made. They are Hand Tempered [illegible] Axes are carefully tested before leaving the factory [illegible] prevents Axes with Flaws or Soft Cutting Edges reaching the User. It also Insures Uniformity of Temper without which an Axe will not Hold a Fine Sharp Cutting Edge.

Highest Grade **Crucible Steel** Bit, Carefully Tempered and Ground. The **Eyes are Punched** from Solid Steel, and will not Stretch nor Break, as occurs with Axes having a Rolled or Welded Eye. The Eye is Tapered from the Outer to the Inner Opening; this Holds the Handle firmly and Prevents its Splitting

In Ordering Axes on this Page, Give Numbers and Weights Only

CUTLERY PRICE BUTTONS

These Price Buttons will be found most Convenient for the Merchant in marking up a Quantity of Pocket Knives, Razors, Scissors or Shears. They can be handled more easily and quickly than Loose Labels and without the Waste.

Made of White Celluloid with Metal Base ⅝ inches in Diameter and Equipped with a Strong Steel Pin ⅜ inch in length. We will furnish free, One Price Button for each number of Knives, Scissors, Razors Etc., that are bought and for which a Merchant wants a Price Button.

The prices range from Twenty five Cents to Three Dollars and can be furnished in the following Fifteen Patterns only—25c, 35, 50, 65, 75, 85 $1.00, 1.15, 1.25, 1.50, 1.75, 2.00, 2.25, 2.50 and 3.00.

Very Important—When ordering Price Buttons always state the Prices wanted and which the numbers are to represent, by referring to the letter "C" in front of Price Buttons wanted, as this will indicate each button's number, for instance, a 25c button would be Number C25, a $3.00 button Number C300

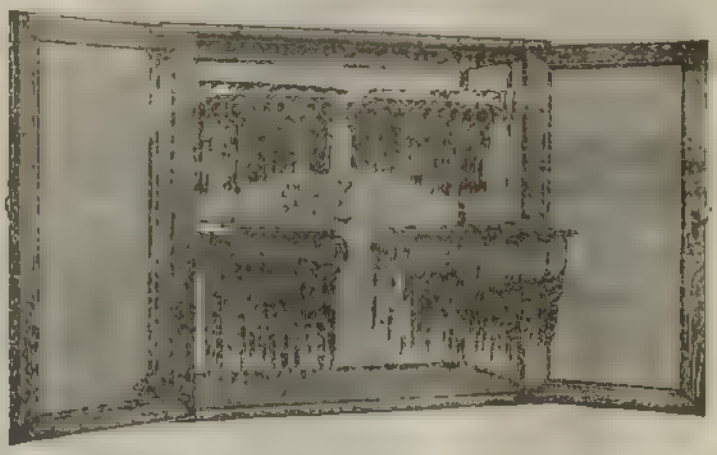
DIAMOND EDGE

(Patented. Controlled by Us. Our Own Patent.)

NOTE—We do not Sell these Cases with *DIAMOND EDGE* or Empire Etching. They are only so Etched When Furnished Free of Charge with Our Special Cutlery Offer. See Our Salesman or Write Us for Proposition. They will be Sold Without Etching at Prices Marked.

The Most Practical Case of its Kind on the Market. The Adjustable Brackets Hold a Complete Line of all Sizes, Perfectly Displayed from All Sides. To Handle Stock, Simply Open Doors of Case and Pull Out Any Arm Desired. These Arms Swing on Long Metal Uprights; to Throw Them Completely Out of Case (Displaying Each Shear on the Adjustable Hooks and Brackets), Pull Out the Arms, One or All at a Time, as Desired. The Upper Arms are Intended to Display Scissors and the Lower Arms for Shears Including 10 Inch Lengths. On the Bottom of Case Can Be Displayed Paper Hangers or Bankers Shears, or Razors, etc. The Scissors and Shears are Hung on Adjustable Hooks so that Each Article Hangs Perfectly Straight. An Entire Stock of Goods can be Displayed in these Cases and will Increase a Merchants Sales more than Any Show Case ever Offered.



Cut Shows Rear View of No. A Case with Doors Open and Two Lower Arms Pulled Entirely Out.

Finest Quality Selected Solid Oak Frame, Golden Finish, Double Strength Glass on All Sides; Wood Top; Arms and Brackets Malleable Iron and Steel, Nickel Plated and Polished. Red Velvet Covered Bottom.

SINGLE STANDARD	Each
No. B—Height 24 inches; Width 13½ inches; Depth 12 inches; Will Display from 9 to 10 Dozen Assorted Sizes of Scissors and Shears; Weight Crated, 44 lbs	$22.00

*DIAMOND EDGE

COMBINATION

(Patented. Controlled by Us. Our Own Patent.)

A Practical and Decided Novelty. A Case for a Quantity of Very Profitable Goods in a Comparatively Small Space. Rests on Top of a Counter or Another Case. Goods Better and More Attractively Displayed in this Case than any Ever Made. What Sells a Line of Goods Quicker than to have them Well Shown? Very Handy and Simple to Get at—just Pull out the Main Arms of Each Upright Standard Toward the Back of the Case and Each Class of Goods is put in Position to be Easily Handled by the Salesman. The Upright Sustaining the Scissors and Shears is Fitted with Arms, Strung with Adjustable Hooks, so Each Pair of Scissors and Shears will Hang in a Perpendicular Position. Ten to Fifteen Dozen Scissors and Shears can be Hung on these Arms. On the Other Upright, One Main Arm is Fitted with Four Secondary Arms to Hang Razor Strops on and will Display Four to Five Dozen Strops. In the Bottom of the Case is a Finely Made Wood Display Filler, Covered with a Fine Waterproof Cloth. This Filler is Fitted with Numerous Fibre Partitions or Compartments to Hold a Stock of 42 Patterns of Pocket Knives and 12 Patterns of Razors. These Partitions are Covered with Fine Purple Silk Plush Covered Lids (Two for Razors, Six for Pocket Knives), with Raised Partitions Corresponding with the Ones in the Bottom of Filler. This is a Very Unique and Practical Display Case in Itself.

Finest Quality Selected Solid Oak Frame, Golden Finish; **Double Strength** Glass on all Sides; Wood Top; Arms and Brackets Malleable Iron and Steel, Nickel Plated and Polished.

	Each
No. C—Height 36 inches; Width 26½ inches; Depth 20½ inches.... Weight Crated, 105 lbs.	**$40.00**

Cut Shows No. D, Double Standard Case

*DIAMOND EDGE

RAZOR STROP

(Patented. Controlled by Us. Our Own Patent.)

The Only Practical Case Made for Displaying Razor Strops. Razor Strops are Difficult to Show to the Best and Greatest Easily; also Become Dry, Dusty and Finger Marked when Displayed in the Regular Way, i. e., Hanging up in the Open Air, and then they are not Well Shown.

This Method of Displaying Razor Strops is a Profit Maker and is a Silent Salesman, Showing More Strops than any Other Means Heretofore Known.

To get at the Stock in the Case, each Main Arm Turns on the Standard and Swings out at the Back of the Case, Throwing Every Strop Out in Easy Access to the Salesman. Nothing Could be as Simple. More Sales can be Made out of a Case of this Character, and in a Short Time it will Pay for Itself.

Finest Quality Selected Solid Oak Frame, Golden Finish; **Double Strength** Glass on all Sides; Wood Top; Arms and Brackets Malleable Iron and Steel, Nickel Plated and Polished.

SINGLE STANDARD

Will Display Four to Five Dozen Strops

	Each
No. E—Height 34 inches; Width 15 inches; Depth 12½ inches.....	**$20.00**

Weight Crated, 55 lbs.

DOUBLE STANDARD

Will Display 8 to 10 Dozen Strops

	Each
No. D—Height 32 inches; Width 25 inches; Depth 12¾ inches..... Weight Crated, 80 lbs.	**$30.00**

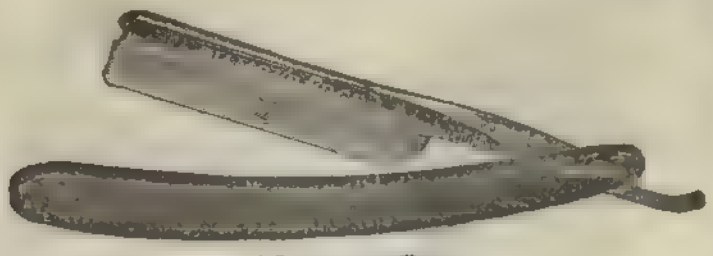
End View showing Concaved Shape Cutting Edge and Extra Stiff Reinforced Back



*DIAMOND EDGE

Cut shows Non-Rusting Metal Reinforcing Washers on each side of Tang next to Handle. Holds the Blade tone so that in closing the edge of Blade will never "Cross Over" and strike side of Handle

RAZOR

NO. DE17300

This consists of the best points of the wedge shape of the old English razor with its stiff, rigid edge and the light weight and attractiveness of the more modern concaved razor.

. It is designed to meet the requirements of all who have difficulty in shaving with comfort owing to tender skin and a wiry beard.

This Razor is giving universal satisfaction to the user who has that tough beard and tender skin. It is made with a stiff edge, much desired in the old English razor, yet, has the light weight of the new concave razor. The edge is so constructed that it will not quiver or rattle under the most trying conditions, and has stood the test of of the most exacting.

Warrant

This razor is made with that exactness which can only be attained by workmen thoroughly trained in their Art. Extreme care is given to the forging, tempering and grinding of this razor, which is followed by the most rigid inspection. We warrant them to give perfect satisfaction if given reasonable care. There is absolutely no excuse for a soiled or rusty razor.

A dealer should not be asked to exchange such a razor.

Blade $^{6}/_{8}$ inch Only, Crocus Polished Back and Grooves, the Concaved Half of Blade Glazed with etched *DIAMOND EDGE* Trade Mark; Diamond Edge Etched in Gold in Groove; Plain, Smooth Tang; Black Rubber Handle.

SPECIAL OFFER

LAMPS

★HIGH ART ASSORTMENT—TWENTY-FOUR LAMPS

Twenty-Four Decorated Glass Lamps. All Are Fitted with No. 2 Celebrated Riverside Clinch-On Collars, for Use with No. 2 Burner and Chimney, But Are Sold Without Burners or Chimneys.

Three of Each are Decorated in Gold, Green and Red. Three of Each Size are Decorated in Pure Gold Bronze.

Our High Art Lamp is an American Reproduction or Fac-Simile of the "Genuine Imported Austrian Intaglio" Decorated Glass Ware, Which is Known All Over the World for its Great Beauty, Originality, etc.

Our High Art Lamp Must be Seen Before its Beauty Can be Fully Appreciated. We Have Never Seen Any Other so Beautiful at The Price, so Perfect in Design and Color Effects. It is Almost Impossible to Convey an Accurate Idea as to What It is by Description.

The Style and Process of Manufacture is Entirely Different from Any Other. The **Designs, Flowers, etc.**, are Pressed in the Bottom of Crystal Glass, and Then Decorated in Three Natural Colors, Tints, etc., and Then All Covered with a Background of Gold Bronze.

The Decorations Are Well Protected from Wear and Tear, as They Are Underneath the Surface

No. B Size—Height to Top of Collar, 10 Inches; for No. 2 Burner and Chimney.

SPARK PLUGS.

SPLITDORF.

TRACTOR, AUTO AND MOTORCYCLE.

No. SP2. No. 8¾. No. 8¾L. No. 8¾M. No. 8⅞. No. 8OM. No. 8B⅞. No. 8⅞L. No. 8¾.

The green jacket of this plug is merely a covering, an outer garment, a mark of identification. It adds finish, nothing more, yet it is of extreme importance to every user of spark plugs because it releases a genuine India ruby mica core and insures the user against the annoyances common to porcelain covered plugs. The green jacket may be cracked or broken or entirely missing without affecting the insulation of the mica core or the efficiency of the plug.

In the first place, imported India ruby mica is used exclusively as an insulator; not in the old washer type, but in a number of thin sheets laterally wrapped around the tapered central electrode or electrical conductor. India ruby mica is the highest grade electrical insulator known. With much less bulk it will carry many times the voltage of any other known insulator adaptable to spark plug use and with no possibility of any current used on the engine breaking it down. Owing to the fact that mica can expand and contract without damage, Splitdorf is able to use a very large central electrode which manufacturers of porcelain plugs are unable to do, as the larger the central electrode the greater the expansion and contraction and the greater the chance of their breaking the porcelain. This is the primary reason why in all porcelain plugs the central electrode will be found to be of very small diameter. The mica, after being wrapped around the spindle or central conductor, is forced into a metal bushing with such pressure as to make it practically a solid mass and there is not the slightest possibility of compression leakage through or past it. One gasket only is used outside of this bushing, allowing the bushing to be tightened up to a point where compression leakage is impossible. It is essential that a plug be easily taken apart for cleaning and, in the case of the "Green Jacket" plug, this operation is simple in the extreme. Any carbon deposits may be lightly scraped from the mica insulation, leaving it as clean and in as perfect condition as when the plug was new.

No. 1WB—Wrench Assortment; 30 semi-finished wrenches, complete with board; size of board, 8x27 inches; weight with wrenches, 20 lbs $12.50

CRESCENT ADJUSTABLE.

SINGLE END.

A new design, neat, compact, and original, combining strength with light weight. Handle drop forged carbon steel hardened all-over. Movable jaw drop forged alloy steel, having four times the strength of ordinary steel

Each wrench subjected to a test before adjustment by a specially devised hydraulic testing machine, and warranted to exceed in strength the largest bolt, the nut of which is within the size of the wrench. Adjustment of the opening is readily made by the one hand holding the wrench. A small spring washer automatically retains the adjustment.

Nos.	CS4	CS6	CS8	CS10	CS12	CS15

One in a box.

EXTRA PARTS.

FOR CRESCENT WRENCHES.

Inches	4	6	8	10	12	15
Jaws	$0.25	.25	.30	.40	.50	.85
Knurls	$0.10	.10	.12	.15	.25	.25
Pins	$0.05	.05	.05	.05	.10	.10

CARLL COMBINATION.

Drop forged from high grade steel, carefully hardened and tempered; has reversible sliding jaw; may be used as a nut or pipe wrench; knurl has coarse threads which prevent stripping and is fitted with a spiral for holding it in adjustment; adjustable jaw has extended bearings in the head, giving it great strength and stiffness. Jaws and edges highly polished.

Nos.	60	80	100
Length, inches	6	8	10
Jaws open, inches	1	1⅜	1⅝
Weight per dozen, lbs.	4½	9¾	16½
Per dozen	$10.00	12.00	15.00

Packed one in a box, half dozen in a carton.

ADJUSTABLE "S."

No. 48—Improved, drop forged jaws; polished jaws and head; black enameled body.

Length, inches	6	8	10	12
Jaws open, inches	¾	1⅛	1½	2
Weight per dozen, pounds	5½	15	23	34
Per Dozen	$8.00	10.00	12.00	18.00

Half dozen in a box.

TRIMO AUTO.

Has the new nut guard feature which keeps the jaws in adjustment.

	Per Dozen
No. TA12—Auto monkey wrench; all steel; drop forged; case hardened; polished jaws; black handle; jaws open, 2 inches; length, 12 inches; weight per dozen, 36½ lbs.	$18.00

Half dozen in a box

HAWKEYE.

Open hearth drop forged carbon steel, tempered, with polished jaws and face.

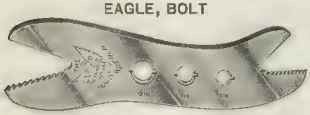
The Hawkeye combines a pipe wrench, nut wrench and thread cutter. All binders and mowers made by the International Harvester Co. are put together with three sizes of bolts and the dies on the Hawkeye will cut these threads. Will also remove "Never Slip" and "Rowe" calks. The best wrench for automobiles; in fact, it has more uses than any other wrench made.

Per Dozen.

No. 200—Hawkeye, case hardened, length 8½ inches; takes pipe ¼ to ¾ inch; takes nuts ⅜ to ⅞ inch bolt size; and cuts threads ¼-18, ⅜-16, ½-13; weight per dozen, 18 lbs. $9.50

Half dozen in a box.

EAGLE, BOLT

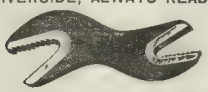


Per Dozen.

No. 200E—Solid cast high carbon steel of superior quality, oil tempered all over, milled teeth, black finish; will rethread ¼, ⅜ and ½ inch bolts. Holds round iron from ¼ to ⅞ inch in diameter; weight per dozen, 4 lbs. $3.50

One dozen in a box.

+RIVERSIDE, ALWAYS READY.



Drop forged, superior quality, oil tempered.

Nos.	101	102
Length, inches	5	7
Holds nuts or pipe, inches	¼ to ¾	¼ to 1¼
Weight per dozen, pounds	6	13
Per dozen	$6.20	8.40

Half dozen in a box

Drop forged, superior quality, oil tempered; drop forge finished body, polished jaws.

No.	14
Length, inches	10
Holds pipe, inches	⅛ to 1
Holds round iron, inches	¼ to 1
Holds nuts, inches	⅛ to ⅞
Weight per dozen, pounds	16
Per dozen	$12.00

Half dozen in a wooden box

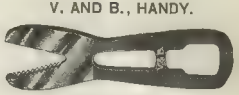
+RIVERSIDE, HANDY.

Drop forged, superior quality, oil tempered; drop forge finished body, polished jaws.

Nos.	12	13
Length, inches	5½	7
Holds pipe, inches	⅛ to ⅝	⅛ to 1
Holds round iron, inches	¼ to ¾	⅝ to 1¼
Holds nuts, inches	¼ to ¾	⅝ to ⅞
Weight per dozen, pounds	4¼	8½
Per dozen	$4.00	7.30

No. 12, one dozen; No. 13, half dozen in a wooden box.

V. AND B., HANDY.

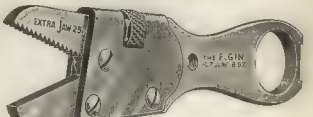


Extra cast steel, milled teeth, oil tempered; natural finish body, polished jaws

No.	1H
Length, inches	5½
Holds pipe, inches	⅛ to ⅝
Holds round iron, inches	¼ to ¾
Holds nuts, inches	¼ to ¾
Weight per dozen, pounds	3½
Per dozen	$1.80

One dozen in a box.

ELGIN ADJUSTABLE.



Can be used in combination with Threading Attachment. Will hold pipe or nuts; nickel plated, hardened steel jaws.

Per Dozen.

No. E7—Length 7 inches, takes pipe to ¾, nuts to 1⅛ inch, weight per dozen 7½ pounds $12.00

Half dozen in a box.

Per Dozen

Extra Jaws—For Elgin adjustable $3.00

STILLSON.

Drop forged steel; polished shank and jaws; 6 to 14-inch have ebony finished hardwood handle; 18 to 36-inch have solid steel handle.

In case, dozen	6	6	6	6	3
Weight dozen, lbs.	8	15	22	27	40
Per dozen	$10.00	12.00	14.00	18.00	24.00

Half dozen in a package.

"PERFECT HANDLE."

Entire bar from top of head to end of handle is drop forged from one piece, special analysis, bar steel. Yoke joins the top and bottom strap of the sliding jaw rigidly, which prevents jaw from buckling under strain. Reinforced on back of bar to compensate for screw head cut out on front of bar. Swell of the handle is largest at the end, thus giving one to three inches more leverage. "Perfect Handle" locked under pressure, no splits nor cracks.

Manufacturers list adopted April 15, 1916.

Nos.	6156	6158	61510	61512
Length, inches	6	8	10	12
Jaws open, inches	1 1/16	1¼	1⅞	2 3/16

In ordering dogs, state if screw or rivet is wanted.

SINGLE BIT AXES

DIAMOND EDGE PHANTOM BEVELED

Polished and Labeled

DIAMOND EDGE Axes are Recognized as being the best Made. They are **Hand Tempered by an Improved Process. Every Axe carefully Tested** before leaving the Factory. This Practically prevents Axes with Flaws or Soft Cutting Edges Reaching the User. It also Insures Uniformity of Temper, without which an Axe will not Hold a Fine, Sharp Cutting Edge. Highest Grade **Crucible Steel** Bit, Carefully Tempered and Ground. Soft Steel Body. The **Eyes are Punched** from Solid Steel and will not stretch nor break, as occurs with Axes having a Rolled or Welded Eye. The **Eyes Tapered** from the outer to the Inner Opening; this Holds the Handle firmly and prevents its Splitting.

SINGLE BIT AXES

*DIAMOND EDGE

Black Gun Metal Finish; Labeled

DIAMOND EDGE Axes are Recognized as Being the Best Made. They are Hand Tempered by an Improved Process. Every Axe Carefully Tested Before Leaving the Factory. This Practically Prevents Axes with Flaws or Soft Cutting Edges Reaching the User. It also Insures Uniformity of Temper, without which an Axe will not Hold a Fine, Sharp Cutting Edge. Highest Grade Crucible Steel Bit, Carefully Tempered and Ground. Soft Steel Body. The Eye is a Punched Opening and Steel and will not Stretch nor Break, as Occurs with Axes Having a Rolled or Welded Eye. The Eye is Tapered from the Outer to the Inner Opening; this Holds the Handle Firmly and Prevents its Springing.

Packed One Dozen Assorted in a Crate; Average Weight per Crate 75 lbs

SINGLE BIT AXES

*DIAMOND EDGE

Hand Made; Black Forged Finish; Etched

DIAMOND EDGE Axes are Recognized as being the Best Made. They are **Hand Tempered** by an Improved Process. Every Axe Carefully Tested Before Leaving the Factory. This Practically Prevents [illegible] Cutting Edge Protecting the User. It Also Insures [illegible] without which an Axe will not Hold a Fine, Sharp Cutting Edge.

Highest Grade **Crucible Steel** Bit, Carefully Tempered and Ground. Soft Steel Body. The **Eyes are Punched** from Solid Steel and will not Stretch nor Break, as Occurs with Axes having a Rolled or Welded Eye. The **Eye is Tapered** from the Outer to the Inner Opening; this Holds the Handle Firmly and Prevents Splitting

In Ordering Axes on this Page, Give Numbers and Weights Only

BRIDGE OVER COLORADO RIVER AT AUSTIN, TEXAS

Esthetics in Bridge Design

Beauty and Harmony Now Considered Essential Features of Bridges

By Dr. J. A. L. Waddell
Consulting Engineer

ARTISTS and architects have formulated various tenets during the past centuries defining their conceptions of the artistic. To these the engineer must look for his first provisional standard for comparison, remembering their origin and the conditions attending it, as well as the general limitations surrounding any such standard.

The following precepts may be adopted:

1. A structure must be in harmony with its environment and not appear as an intrusion thereon.

2. Good general lines are first necessary as a basis, then a consistent scale or proportion of parts.

3. Mere ornamentation generally affronts the sense of harmony and fitness

4. Methods of nature always culminate in expressions of beauty. Methods of nature also culminate in the survival of the fittest. Hence our conceptions of beauty have as a basis functional efficiency.

5. Owing to man's mental inertia, the rigidity and immobility of the ideals established by old conditions prevent proper recognition of the progress of science and of the needed modifications in standards.

6. A form which admits of no explanation, or which is mere caprice, cannot be beautiful. It must have and show some purpose in its general relation.

7. Each part of any structure should be treated in such a way that its function therein shall be apparent and emphasized according to the importance of that function.

8. Such emphasis may be attained by decorative treatment indicating conventionally the character of the work accomplished by the part.

9. Different kinds of material used in structures call for different treatment and varying esthetic standards.

10. The present steel-trussed bridge is inherently ugly; but with the further perfecting of the science of bridge design, and a recognition of the fact that beauty is an aim and not an accident of growth, esthetic forms will be evolved.

The underlying thought connecting these precepts is that the structure must be fitted for the work it is to do, that it should express the truth, and that imitations and falsities are vicious and outside the realm of rational esthetics.

The Harmony of the Bridge with Its Environment

To secure harmony between the structure and its environment means the merging of its general outlines with those of the landscape. In this connection, it should be remembered that the bridge will likely be seen from various angles, and that each viewpoint will cause its own individual impression. In case of conflicting impressions, it becomes a matter of good judgment as to which should control. The merging of outlines can usually be secured by attention to the approaches, by extending

the hand-rails beyond the structure proper, or by curving the wing-walls of the abutments. A small arch or girder span can often be given dignity by lengthening the approach walls or hand-rails.

Symmetry of Spans

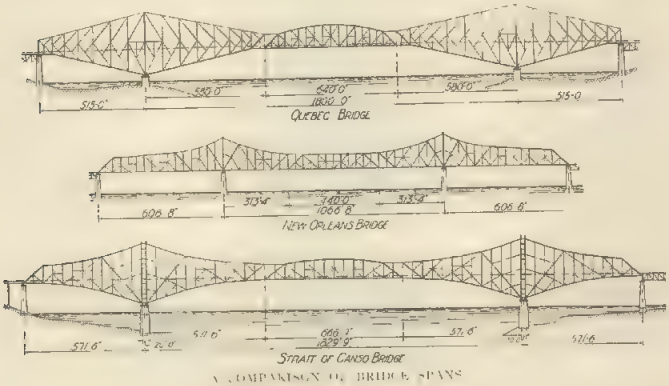
There is no feature of a bridge so pleasing to the eyes of all observers as perfect symmetry in the layout of spans. Unfortunately, conditions are not always favorable to perfect symmetry of design, for the bed-rock will often dip rapidly and thus necessitate the use of spans of different lengths, and the channel of the river often refuses to keep at midstream, persisting in hugging one shore. In such cases it becomes necessary to do the best one can with the unfavorable conditions and to make the structure sightly, if not symmetrical. Any divergence from symmetry and regularity for which there is a self-evident reason produces no unfavorable impression upon the beholder, altho it may be sufficient cause for failure to excite his admiration for the structure. If one can see at a glance the *raison d'être* of all the principal parts and peculiar features of a bridge, his sense of fitness will be satisfied and his general impression will be favorable; but the nearer the approach to perfect symmetry and the more artistic the outlines, the more thoro will be his appreciation of the general effect of the structure.

Monotony of Outline Should Be Relieved

The outline of a bridge should not be monotonously straight; nor should changes in outline be too abrupt, unless there is an apparent reason therefor, such, for instance, as a heavy intervening mass of pier. The best effects are secured by outlines changing by easy transition from one form to another. In case of simple truss spans, a polygonal top chord giving the effect of a smooth curve adds much to the pleasing effect as well as to the economy. The harsh outlines of a cantilever bridge can generally be relieved by making the chords simulate a curve. Most cantilevers offend in this respect.

As evidence that it is possible to make cantilever bridges esthetic, there is shown on page 213 a study of the author's proposed bridge across the entrance channel to the harbor of Havana, Cuba. It is submitted that the outlines have a graceful appearance, and the layout is quite economic; for the distance from center to center of main piers was fixed by local conditions, and it was found advisable to make the suspended span as long as practicable in order to provide a wide opening for the full clear headway.

The last design of the Quebec Bridge submitted by the commission of engineers is inferior in esthetics to the design of the structure which failed, as the chords of the



A COMPARISON OF BRIDGE SPANS

former are in straight lines which intersect each other abruptly. The ends of the structure also offend the eye by their abrupt termination. By making some slight changes in the outline it would have been practicable to improve greatly the appearance. Comparing that design with the design of the proposed New Orleans Bridge, by the late Dr. E. L. Corthell, C. E., one is struck by the superior appearance of the latter. It is true that the main span is much shorter, being only one thousand feet long, as against eighteen hundred feet in the Quebec Bridge, nevertheless that does not militate seriously against the legitimate drawing of a comparison of the esthetics of the two structures.

In 1904 the author made a study for a proposed cantilever railway bridge across the Strait of Canso, Nova Scotia. The main span was eighteen hundred and thirty feet long—just thirty feet longer than that of the Quebec Bridge. In the author's design the feature of artistic appearance was given full consideration, and the layout was made as esthetic as the limitations of his personal experience and taste permitted. In order that the reader may compare for himself the three layouts mentioned, they are reproduced and shown together herewith.

Exclude Unnecessary Ornamental Portals

In many bridges what would otherwise be a pleasing outline is spoiled by the introduction of massive ornamental portals at the ends and intrusive towers at the intermediate piers. European bridges offend in this respect more than American structures. Examples of this are the Tower Bridge at London, the Rhine Bridge, Mainz, and the Worms Highway Bridge over the Rhine. A comparison of the general lines of these bridges with those of the Brooklyn Bridge, the Eads Bridge at St. Louis, the Chestnut Street Bridge over the Schuylkill River at Philadelphia, and the Washington Bridge over the Harlem River in New York City, results greatly to the advantage of the American designs, mainly because of their simplicity as contrasted with the over-ornamentation of the European structures.

The Sense of Proportion in Bridges

In addition to adopting a pleasing outline or profile for the bridge, attention must also be paid to the scale or proportion of the parts. Habit plays an important rôle in our conception of proper scale or relation of things. Those proportions which by long usage we have become accustomed to we regard as fitting and pleasing, so that a departure from such recognized standards is often confusing and disappointing When a new structural material with different physical properties is introduced, a scientific and consistent use of it offends our preconceived idea of scale and proportion, until we have become habituated to its rational utilization and thus have modified our former conception of harmonious proportions.

Justifiable Ornamentation

Ornamentation can have no other justification than that it serves to render clear or to emphasize the function of a member in the structure. Distinction must be made between appropriate and inappropriate, necessary and unnecessary, expensive and inexpensive decoration. If a bridge is to be located where it will be seen constantly by many people, it is well to spend extra money to make it sightly, beautiful, in keeping with its surroundings; but when it is to be placed in a dense forest or on a sandy desert where it would seldom be seen, it would be folly to spend any more on its construction than is called for by the engineering requirements of the conditions, due allowance being made, of course, for a possible peopling of the forest or desert in the not very distant future.

Functional efficiency—the ability of any member or detail to perform the duty assigned it in an efficacious way—is a most valuable criterion. If any part can be rendered more efficient by a modification, then such a change is to be made. It may mean that our esthetic standard will require some readjustment, but the ultimate outcome will be a harmonizing of that standard with the attainment of maximum efficiency. Take as an example the case of curved struts There have been advocates of such, and even users thereof, in large and important bridges; yet to the mind trained in stress analysis this is a monstrosity not to be tolerated. As a better understanding and greater appreciation of the principles of mechanics come to the layman, a change in his standard will take place.

The introduction of unnecessary parts or

forms that have no apparent or sufficient purpose or connection with the structure is to be avoided. These detract from the fundamental objective. An example of the violation of this principle is the Tower Bridge of London. This case has been well set forth by H. Heathcote Statham, Esq., Fellow of the Royal Institute of British Architects. The following quotation is made from his paper on "The Architectural Element in Engineering Works," published in the *Journal* of that Society of May 20, 1899:

"The Tower Bridge . . . represents the vice of tawdriness and pretentiousness, and of the falsification of the actual facts of the structure. It is stated that the exterior clothing was designed by an architect; he cannot have been a very eminent one, as we never hear his name; it looks to me more like what results from the advertisement we sometimes see—'Wanted immediately a draftsman; must be an expert Gothic hand'—it is draftsman's architecture. The exceedingly heavy suspension chains are made to appear to hang on an ornamental stone structure which they would in reality drag down, and the side walls of the apparently solid tower rest on part of the iron structure, and you could see under them before the roadway was made up. All architects would have much preferred the plain steel structure to this kind of a sham. If iron is designed on good lines, it will look better in itself without these gewgaws. We could not have a better example of this than the *Galerie des Machines* at Paris; an iron-roofed structure on the grandest scale, in which there is not a particle of decoration, and yet which is so fine and imposing in its effect that it deserves to be called a great work of architecture as well as of engineering."

The author, who has examined thoroly the Tower Bridge, endorses unequivocally these strictures of the eminent British architect. The structure has the honor of being the most monumental example of extravagance in bridge construction in the world. For but a small percentage of the entire cost of the bridge a far better and more effective structure could readily have been built.

Essential Parts Should Define Themselves

The discussion of this last principle leads by antithesis to the next one. If it is undesirable to have superfluous members or parts, then, on the other hand, those parts which are necessary should have that necessity made apparent by receiving such treatment as will fittingly proclaim their function and importance in the construction. Many structures otherwise satisfying fail in this respect, especially those of masonry and concrete. The introduction of reinforced concrete of late years has given an impetus to the building of arch spans, a type of structure that admits of esthetic treatment far more readily than do truss spans. Many arches fall short of their best effect just because sufficient attention has not been given to this principle of making evident the function and relative importance of each part of the structure. Their usual defects are as follows:

1. Failure to define the arch ring by letting it merge into the spandrel walls without any paneling for relief
2. Failure to define the skew backs or springing lines of the arch.
3. Failure to separate spandrel wall from the hand-rail by a belt course conforming with the grade of the roadway.
4. Failure to subordinate the hand-rail to the main part of the structure.
5. Failure to give the piers distinctiveness and the ignoring of the fact that the more important part of the pier is below the springing line.

Architectural Effect in American Bridges

The main portion of the improvement in architectural effect in American bridge engineering practice which has taken place in the last decade (and it is by no means inconsiderable) has come thru the extensive building of reinforced concrete structures. The following examples may serve to illustrate some of the progress in bridge esthetics that has been made by reason of this comparatively new material, which adapts itself so readily to the production of forms pleasing to the artistic sense of the beholder—at least, more strictly speaking, they will show what the author has been striving to do in order to improve the appearance of his structures.

The first illustration shows the Colorado River Bridge at Austin, Tex. It is situated on the main street of the city leading to the State Capitol. On that account it was urgent that the structure be made as sightly as the limited amount of the appropriation ($200,000) would permit. The bridge is 1,000 feet long and 50 feet wide. The pier foundations were somewhat expensive, involving the use of piles driven into rather hard material, so that it was a difficult matter to keep the cost within the appropriation. This was just barely accom-

PROPOSED BRIDGE OVER ENTRANCE OF HAVANA HARBOR, CUBA

plished; hence there was no money available for ornamentation. Perhaps this was just as well, for the simplicity of the design is probably its most pleasing attribute.

The Arroyo Seco Bridge in the city of Pasadena, Cal., is shown in the last illustration. In this case also the appropriation was small—too small, in fact, for several reasons. Curiously enough, the limit was exactly the same as that of the Austin Bridge, viz., $200,000, and no persuasion was effective in increasing the amount. It was questionable whether a proper structure could be designed so that the entire cost, including the engineering, could be kept within the limit; and to settle the question an outline of the design, with exceedingly full data for estimating the cost, was sent to the author's office and a complete detailed estimate prepared. It showed that the work could be done with a possible margin of $2,500. There was an unfortunate condition which governed the layout, namely, that if the structure were built entirely on tangent, the crossing of the stream bed would involve either a much longer span or a deeper pier than would a location a short distance below, for the bed-rock curved suddenly in plan from a wide to a narrow gorge. The engineers of the city who had studied quite carefully the conditions had laid out the center line of structure partly on tangent and partly on curve, so as to avoid the wide portion of the gorge. Objections to this plan were made, and an extra appropriation of $6,000 was asked for, but to no avail. The bridge was built by contract and just within the appropriation. Since completion, altho there are many in the city who point to the graceful curve at the end as a thing of beauty, many questions have been asked as to the reason for the curve

Notwithstanding this unavoidable flaw in the structure, the conditions of the surrounding scenery are so favorable to the

CONCRETE ARCH BRIDGE OVER ARROYO SECO CANYON, PASADENA, CAL.

development of esthetic construction, and the study of the layout was so effectively made, that residents and visitors alike are unanimous in their approval of the appearance of the structure.

New Materials Change Esthetic Standards

The advent of new material with different physical properties from those customarily used places the designer in the need of a new standard of esthetics. In developing such a standard, the fundamental criterion of fitness will be that of attaining the highest functional efficiency and employing it in the appearance of the entire construction. When this is attained, the old standards will gradually be made to conform to the new conditions.

In respect to the decoration, it is true that a little ornamentation is generally much better than a great deal, and that this little should be appropriate and in keeping with the general character of the structure. A prodigal use of cheap cast-iron trimmings at a portal of a steel bridge is not in good taste. Again, in large bridges it is proper to be somewhat extravagant in the use of metal at the portal for the sake of appearance, especially as such metal, if it does not add to the strength of the bridge, certainly increases its rigidity.

The ornamentation of viaducts and elevated railways is something which has never received in America any attention worth mentioning, as is proved by the inherent ugliness of many of the elevated roads of our great cities, and the painful plainness of our railway trestles thruout the country. It is principally this neglect of esthetics in design which has created such bitter opposition on the part of the property owners to the building of elevated roads in the heart of the city of Chicago.

Electric lights and gas fixtures of artistic pattern can be made great aids in securing a pleasing effect in designs for bridges and viaducts, and at night a well-studied distribution of incandescent lights can be made to produce a brilliant appearance at the portals of any large and important city bridge.

Ornamental hand-rails are also of great service in decorating trestles and bridges. While these hand-rails must appear as subordinate to the main body of the structure, they can be emphasized by paneling or open work. The posts separating the panels should be subordinate to the end posts. In small spans, the hand-rail should be of the open type in order not to make the span appear too massive and top-heavy. For large spans a solid hand-rail is desirable, in order to give more body to the profile of the bridge. A hand-rail should not terminate abruptly without some apparent cause. A curving or flaring of the hand-rails at the approaches of the bridge adds to the esthetic effect. If this cannot be accomplished, then some ornamental post of dignified size, suitably decorated and surmounted by an artistic lamp post, will be found very effective.

Bridge Approaches

The ornamentation of bridges by the adoption of elaborately artistic approaches has received but little attention in America, the reason being that any money so expended has evidently no utilitarian purpose, and consequently to the eye of the solely practical man appears to be entirely wasted. In Europe it is customary to ornament large and important bridges in this way, and the time is coming when it will be the practice in America also.

Conclusion

From an artistic point of view, it must be confessed that the average American bridge is inferior to the average European structure; hence, while it is advisable that American bridge designers study carefully European practice in respect to esthetics, they should be cautious to avoid thoughtless imitation; because decorative features which are appropriate to the heavy, massive and costly bridges of Europe would be out of place when grafted on some of the light, airy and economic structures that may still be considered as characteristic of American bridge engineering, altho there is a tendency nowadays in this country toward heavier construction

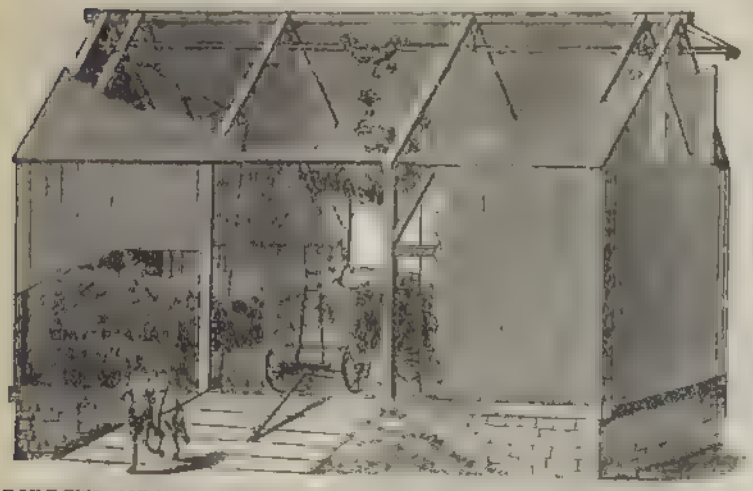
HAY CARRIERS

MATERIALS REQUIRED AND DIRECTIONS FOR PUTTING UP CARRIERS

MYERS



DIRECTIONS FOR ERECTING MYERS PATENT STEEL TRACK

Secure hay pulley rope from rafter to rafter, say 6 feet from ridge pole or peak and about 10 feet apart. Then place extension ladder across the ropes with bottom on floor. Now nail one rafter bracket at each end of barn, and draw a line from one end to the other and stretch tight. Then nail all rafter brackets even with this line. You are now ready to put up the track, which can be done in sections. Hoist near to rafter brackets by ropes. Then place hanging hook over rafter bracket and fasten by putting on bolt.

Material Required for a Steel Track Outfit for Different Length Barns

For a 40 foot Barn—One hay unloader. 36 feet Steel Track. 19 Hanging Hooks. 19 rafter brackets. 5 Knot Passing Pulleys. 1 Fork or 3 Slings. 6 Floor Hooks. 110 feet ¾ inch Manila Rope. 50 feet ⅜ inch Check Rope. 40 feet ⅜ inch Reverse Rope.

For a 50 foot Barn—One hay unloader. 48 feet Steel Track. 25 Hanging Hooks. 25 Rafter Brackets. 5 Knot passing Pulleys. 1 Fork or 3 Slings. 6 Floor Hooks. 130 feet ¾ inch Manila Rope. 55 feet ⅜ inch Check Rope. 50 feet ⅜ inch Reverse Rope.

For a 60 Foot Barn—One hay unloader. 58 feet Steel Track; 28 Hanging Hooks. 28 Rafter Brackets. 5 Knot passing Pulleys. 1 Fork or 3 Slings. 6 Floor Hooks. 150 feet ¾ inch Manila Rope. 60 feet ¾ inch Check Rope. 60 feet ⅜ inch Reverse Rope.

For a 70 foot Barn—Hay Unloader. 68 feet of Track. 34 Hanging Hooks. 5 Knot Pulleys. 1120 Pulleys. 1 Fork or 3 Slings. 6 Floor Hooks. 190 feet ¾ inch Draft Rope. 70 feet ⅜ inch Check Rope. 70 feet ⅜ inch Reverse Rope.

For an 80 foot Barn—Hay Unloader. 78 feet of Steel Track. 40 Hanging Hooks. 40 Rafter Brackets. 4 lbs. Bracket Nails. 5 Fig. 1120 Pulleys. 1 Fork or 3 Slings. 6 Floor Hooks. 210 feet ¾ inch Draft Rope. 80 feet ⅜ inch Check Rope. 80 feet ⅜ inch Reverse Rope.

Different lengths of Barns will use track, hanging hooks and rope in same ratio as above.

If you are to take hay in at end of Barn and have rope pass down over fast to horse, same as on Fig. 1120 Pulley, rope will be required to go to end of barn and then over, thus requiring about 10 feet more draft rope.

The pulley to draw the carrier track is the new Double Angle Steel Track with track, and it is cut. The metal rivets of track hanging hooks to support the carrier track through which they are riveted, as they will not foul the carrier.

This cut, Fig. 430, shows how steel track should be put up and how rope is tied from one rafter to the other close under the track to make stop for carrier at end of barn. Also shows how Rafter Brackets are placed.

How to Reverse Carrier—Set Fork in hay. Tie ends of rope together, to which hang a heavy weight. Pull carrier until load comes to the floor, then untie rope. Fasten weight to one end of rope, change Pulley A to floor B. This reverses carrier for opposite direction without leaving the floor or putting up. Use all knot passing pulleys. For taking in hay at end of barn use V shaped brace for track support, as shown in cut.

Illustrating how Track should be placed in Barn; also Rope Stop and how Pulley should be placed.

NEY MFG. CO.

MATERIAL FOR STEEL TRACK FORK CARRIERS

When Taking in Hay at End of Barn

1 Fork Carrier.
Track the Required length for Barn.
1 Track Eye or 1 Hanger Hook and 1 Rafter Bracket for each Rafter.
3 Knot Passing Pulleys.
3 Floor Hooks.
1 Swivel Rope Hitch.
1 Harpoon or Grapple Fork.
Draft Rope ¼, 11/32 or ⅜ inch; when team is at same end of barn as hay is taken in—length equal to twice the length of track, plus three times the distance from floor to track.
When team is at opposite end of barn to where hay is taken in—length equal to once the length of track, plus three times the distance from floor to track.
When team is at center (side) of barn—length equal to 1½ times the length of track plus three times the distance from floor to track, plus half the width of barn.
Trip Rope ¾ inch—length equal to distance from point of elevation to opposite end of track.
For barn having center (side) drive same as above, except 5 pulleys and floor hooks.

MATERIAL FOR STEEL TRACK SLING CARRIERS

Substitute Sling Pulley for Fork Pulley in carrier and three slings and add 15 feet to length of Draft Rope.

DIRECTIONS FOR PUTTING UP DOUBLE ANGLE STEEL TRACK

Put up the track in sections or by clamping the entire length together. The track may be graded by the use of assorted track eyes or put up with all one size as desired. See that the rafter brackets are properly nailed and that the track eyes are as near the center between rivets in the track as possible; this increases the strength of the track. Bolt trip block on track over point at which you wish to elevate. See that the bolts on trip block are drawn up tightly.

The above cut represents Double Angle Steel Track arranged for taking hay from outside or end of barn, and shows how track is graded when using track eyes of assorted lengths. Where slings are to be used it is advisable to place a hanger at every rafter.

This cut represents Double Angle Steel Track graded from ends to center of barn when track eyes of assorted lengths are used. It greatly assists the return of carrier after discharging its load. Also checks speed of carrier as it leaving hanger or trip block.

MATERIAL FOR WOOD TRACK CARRIERS

Same as for Steel Track Carriers, except that a wood track carrier, wood track and wood track hanger eyes are used.

DIRECTIONS FOR MAKING WOOD TRACKS

Use 4x4 hardwood or pine scantlings dressed down to 3¾ inches; or use two 2x4 pieces and spike them together, breaking joints.

4x3 inch can be used by blocking down the stop to fit the carrier and to engage the lock.

DIRECTIONS FOR PUTTING UP WOOD TRACK

Use a track hook to every rafter over the point of elevation and preferably through every other one to the end of track. Cut a hook at every second rafter will answer except at point of elevation. Let all nuts into the track so they will not interfere with the carrier. Make sure the track is at the proper depth where the trip block or bumper is placed. It may be necessary to cut a notch or set it into the wood.

DIRECTIONS FOR REVERSING CARRIERS

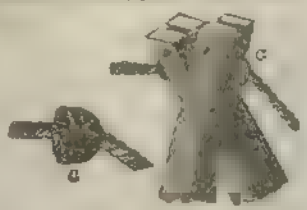
Pull carrier to stop block, let the pulley drop out of carrier. Take rope out of pulley at end of barn and while standing beneath the carrier give the rope a little slack and give it a throw to obtain a half turn in the swivel. Re-thread the pulleys in the end of the barn you wish to operate in, then the carrier is ready for operation.

Before pulling large rope out of pulleys tie a small rope to end of it so that the small rope will be through pulleys for pulling up the large rope the next reverse.

HAY CARRIERS

DIRECTIONS FOR PUTTING UP WIRE CABLE AND DERRICKS FOR STACKING

Take four poles or 4x4 scantling about 30 feet long; cut a slot in the top of each about ¾ inch wide and 4 inches deep for cable. Bore a hole for a ½ inch bolt about 1 inch above the bottom of the slot, to prevent cable from coming out while raising. Place carrier bumper complete on cable about at center. Place cable in slots, under bolts, th[illegible] a single clamp about 40 feet from each end of cable to prevent the poles from sliding in. Bolt cross pieces together with 3/4x10 inch bolts. Place carrier on cable between [illegible] clamps. Make loops at each end of cable, using double clamps for the purpose. Thread carrier and pulley with rope and fasten pulley near one of the single clamps. Fasten loops on ends of cable to strong stakes for guys and erect derrick by raising one set of poles just high enough so they will stand without slipping at bottom; then raise the other set about the same, continuing alternately with each set until cable is stretched tightly. Now fasten bumper to cable at opposite end from pulley over point at which you wish to elevate. Place second pulley to stake in ground nearly under the first pulley placed and it is ready for operating.



MATERIAL FOR WIRE CABLE CARRIER AND DERRICK FOR STACKING.

1 Cable Carrier.	2 ¾x10 inch Carriage Bolts.
1 Harpoon or Grapple Fork.	130 Feet ¾, ⅞ or 1 inch Rope.
2 Single Cable Clamps.	3 Pulleys.
2 Double Cable Clamps.	4 Poles 4x4 inch, 30 feet long.

This cut shows Carrier in use, unloading wheat or corn fodder in Barn with Sling Carriers. Fork Carriers can not be used for this purpose.

Lumber Required to Build a Hay Rack

Have All 2 inch Stuff Dressed on Both Sides, and inch Stuff on One Side. Two Pieces 2x8, 16 feet for Bed Sills. Have Bed Sills 6 inches Narrower in Front than in Rear. Two Pieces, 2x4, 14 feet, Cut in Two for Top Cross Pieces. Six Pieces, 2x4, 16 feet, One for Front Ladder, One for the Four Button Cross Sticks Under the Bed Sills, and Four for the Top Longitudinal Pieces. Two Pieces, 2x6, 12 feet, to Cut into 6 feet Lengths for Sides of Wheel Boxes. Spike from Underneath the 2x4 Longitudinal Pieces. Two Pieces, 1x6, 16 feet (Fencing) to Cup up to Cover Wheel Boxes. Two Pieces, 1x12, 10 feet to go in Front of Wheel Boxes to front End. The Above are for 14 inch Clamps; 16 inch take Larger Cross Pieces or Bed Sills.

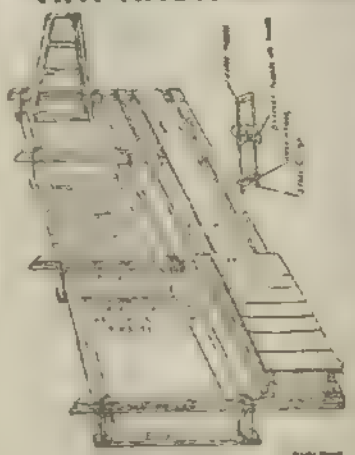
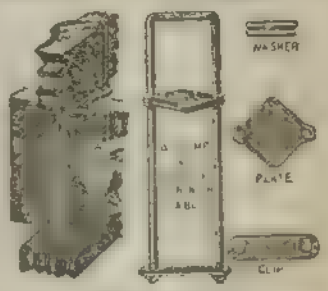
HAY RACK BRACKETS AND CLAMPS





WENZELMANN

With these Brackets and Clamps any Farmer Can Build the Strongest and Neatest Hay Rack for His Wagon without Boring Through the Main Frame Work or Weakening the Wood. No Bolts or Nails, no Rough Pieces of Iron Plates to Chafe Between the Timbers; a Perfectly Rigid Rack, with no Possibility of Working or Twisting at the Joints. Lighter Material May be Used with These Fixtures than with any Other.

The Brackets are Made from a Mixture of Iroquois Steel and are the Heaviest and Strongest on the Market; They do not Bend and Cannot Get Out of Shape; the Clamps are Made of Special Steel and will not Break, they are Oversize, and the Nuts Have a Full Size Thread, Giving a Tight and Lasting Job; the Lower Clip is Made of Heavy Band Steel with Rounded Ends.

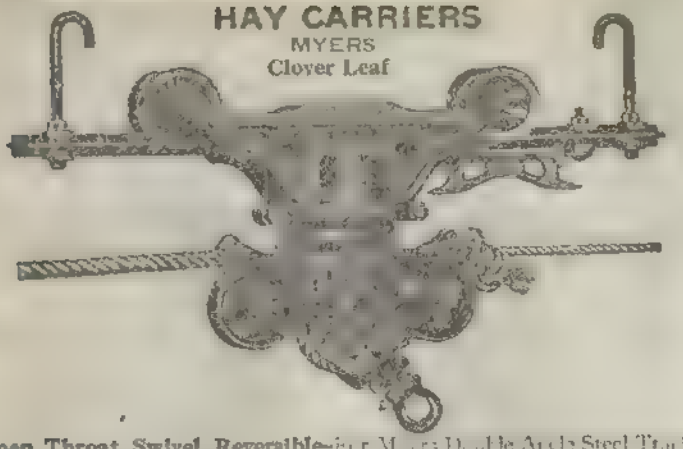
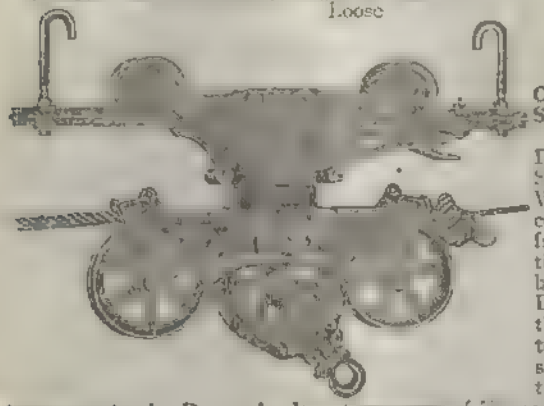
HAY CARRIERS

MYERS
Clover Leaf



Open Throat, Swivel, Reversible—For Myers Double Angle Steel Track
The Wide Mouth Receives the Pulley from Either Direction; Carrier can be reversed by Drawing the Rope Through from End to End or by both Sides, Preventing the Load from Accidentally Dropped. The Patent Double Fork Hook is Pivoted to Pulley on Both Sides, Preventing the Load from Being Accidentally Dropped. It is Composed of Three Parts and has no Springs; The Swinging Fork Pulley Relieves the Carrier Frame from all Strain when Drawing Hay over a High Beam or into a Well Filled Mow. Each

No. 111—Aluminum Finish, Red Striped Malleable Iron, Beaded Frame, 3¼ inch Flanged Track Wheel, with ½ inch Tread and Turned Steel Axle; 14 inches Long; Height 18 inches; With Trip and Two End Stops; Weight 27 lbs. **$9 80**
Loose

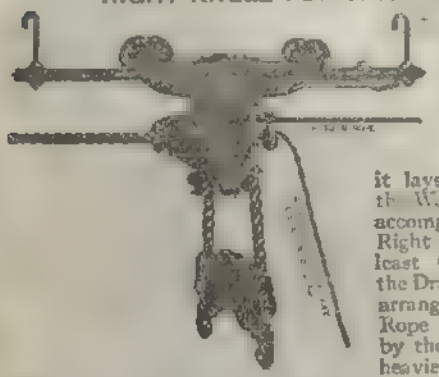


MYERS

Clover Leaf, Open Throat, Swivel, Reversible
For Myers Double Angle Steel Track. The Wide Mouth receives the Pulley from either Direction; Carrier can be reversed by Drawing the Rope through from End to End or by both sides, prevents the Load from being Accidentally Dropped, It is Composed of Three Parts and has no Springs. The Swinging Lift Pulley Relieves the Carrier Frame from all Strains when Drawing Hay over a High Beam or into a Well Filled Mow.

No. 121—Aluminum Finish, Red Striped Malleable, Beaded Frame; 7 inch Rope Sheaves, with Roller Bearings; Each 3¼ inch Flanged Track Wheel, with ½ inch Tread and Turned Steel Axle; 16 inches Long; Height 21 inches; With Trip and Two End Stops; Weight 32 lbs. **$11.20**
Loose

RIGHT ANGLE FORK AND SWING CARRIER



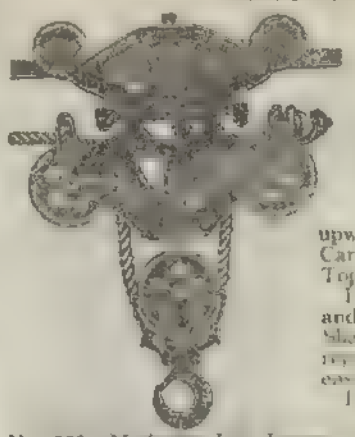
For Myers Double Angle Steel Track. This Machine is so arranged that it Elevates the Load at Right Angles with the Track with the Result that when the load is discharged in the Mow, it lays parallel with the load on the Wagon. This is a feature only accomplished by using Special Right Angle Pulleys which add at least One-Half Horse Power to the Draft. The Locking Device is so arranged that the Tension of the Rope Lock is regulated entirely by the Weight of the Load; the heavier the Load, the greater the Tension on the Rope Lock. Lock adjusts itself to any size Rope, ¾ to 1 inch.

The Sling Elevator operates Automatically and is Tripped by the Sling Pulley striking a Plate immediately under the Carrier. It is also arranged with a Separate Trip Rope (shown in Cut), by the use of which the Load may be carried into the Mow at any Elevation desired without Drawing entirely to the Top of the Barn. The Machine can also be Reversed by turning the Swivel from Left to Right. Each

No. M70—Aluminum Finish, Red Striped Malleable Iron Frame; 3¼ in. Flanged Track Wheels with ½ in. Tread and ⅜ in. Turned Steel Axles; Length 21¼ in.; Height 19 in., Weight 52 lbs. **$16 80**
Loose

HAY CARRIERS

NEY MFG. CO.



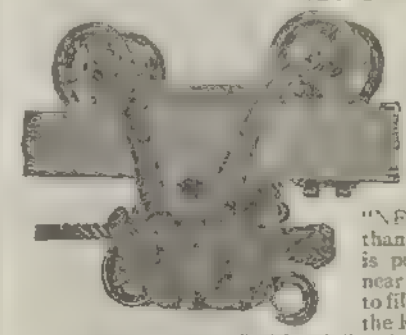
One of the Most Substantial Hay Carriers made; Contains Less Parts than any other Carrier of its Class. The Locking Device is Positive in Operation, Constructed without Springs and Securely Holds the Load, Positively Preventing it from Accidentally Dropped. The Fork Pulley is permitted to Swing upward near the Track, enabling the Carrier to Fill the Mow Close up to the Top Comb of Roof.

Large Wide Open Mouth; Both Rope and Swivel Reversible; All Wheels and Sheaves Revolve on Steel Turned Bushings which Reduces the Friction and Lightens the Draft.

For No. 1 Double Angle Steel Track. Each

No. 300—Malleable Iron Frame, Aluminum Finish, Frame with Wide Mouth, Height 14 inches, Steel Axles, Iron Wheels, Steel Draft Wheels and 5 inch Cast Pulley Sheaves; Weight 25 lbs. **$10 94**
Loose

NEY CLIMAX



Open Throat, Swivel Reversible
For 4x4 Wood Track
The Travelers and Sheaves revolve on Turned Bushings, which makes the draft very light.

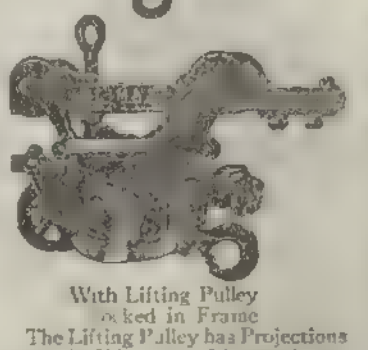
For Strength, Features of Construction and Durability this Carrier is Unexcelled by any other make. It is No. 110 and an exclusively "NEY," having more points of merit than any other make. The Fork Hook is permitted to swing upward, very near to the Track, enabling the Carrier to fill the Mow close up to the comb of the Roof. Each

No. 115—Aluminum Finish Malleable Iron Frame, 19 inches Long, 8 inches Wide, 16 inches High; Weight 30½ lbs. **$9 80**
Loose

NEY CABLE CARRIERS
Swivel Reversible

For ¾ or ⅝ inch Wire Cable or Rod. Used Largely for Outdoor Stacking. Easily Reversed from the Ground. The Trip-Back Fastens Securely to the Cable, but is so Constructed that it will Adjust Itself to Prevent Interference with Carrier in the Event of the Cable Twisting. Each

No. 70—All Malleable Iron, Adjustable Head, 3¼ in. Travelers, Length 7 in., Height 13 in.; Weight 24 lbs. **$9 80**
Loose



With Lifting Pulley Locked in Frame

The Lifting Pulley has Projections on each Side, on a Line with the Yoke, which Engage the Locks on the Inner Sides of the Frame when the Pulley is Drawn into the Opening in the Frame.

With Lifting Pulley Disengaged

The Locking Device is Positive in Operation and is Constructed without Springs. The Fork Hook is Permitted to Swing Upward very near to the Track, Enabling Carrier to Fill Mow close to comb of Roof.

NEY CLIMAX
Open Throat, Swivel, Reversible
For No. 1 Double Angle Steel Track Each

No. 110—Aluminum Finish Malleable Iron Frame; 3¼ in. Travelers, ½ inch Tread, 13¾ in. Long, 7½ in. Wide, 10¼ in. High; Wt. 23 lbs. **$8.50**
Loose

HAY CARRIER PULLEYS

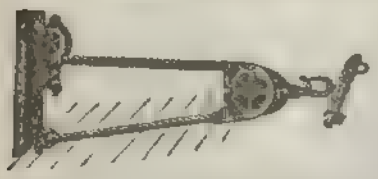
For Norleigh Diamond and No. 110, No. 115 and No. 80 Ney Climax Hay Carriers.

Each

No. 402—Malleable Iron; Length Over All 9 inches; Diameter of Sheave 4 inches; Weight 3 lbs $1.40

Loose

HAY CARRIER SNATCH PULLEY BLOCKS



This Device Shortens the Travel of the Horse. Tie a Knot in the Rope and Put the Worker in Front of it (see Cut). The Rope can then be thrown off the Snatch Pulley, and thus Allow the Hook to be Returned to the Load without Waiting for the Return of the Horse.

Per Dozen

No. 123—Malleable Iron Frame; Diameter of Sheave 4 inches, for 1 inch Rope or Smaller; Weight per Dozen 66 lbs..... $15.40

Loose

HAY CARRIER SLING PULLEYS

UNIVERSAL

The Universal Sling Pulley can be used with any make of Hay Carrier. It cannot be misplaced on the load as it can be used with either side up and with any shape or style of fork pulley.

Each

No. US—Malleable Iron; Galvanized; takes ¾ inch Rope; Weight 10 lbs. $4.20

Loose

HORSE CLIPPING AND SHEEP SHEARING ATTACHMENTS.

This attachment as illustrated here consists of an eye spindle, 6½ feet of flexible shaft complete with chain and the horse clipping knife.

Instructions are furnished so that any one can remove the regular apparatus from the machine and put the horse clipping attachment in its place.

Each.

Horse clipping attachment for No. 8 or 9 machine illustrated; weight 6 lbs. $8.25

Each.

Sheep Shearing Attachment for Horse Clipping Machine—For No. 1 or 2 clippers illustrated above...$12.25

This attachment consists of the universal jointed solid core type shaft, a No. 5 shear and four sets of knives.

Instructions are furnished with each attachment so that any one can remove the regular apparatus from the horse clipping machine and put the sheep shearing attachment in its place.

SHEARS FOR SHEEP SHEARING MACHINES.

Each.

No. 5 Shear—Complete, weight each 3¼ lbs.....$6.75
Extra top plates, No. 276.....20
Extra bottom plates, No. 277....60

Each.

No. 7 Shear—Ball bearing, complete, weigh each 3¼ lbs.....$8.00
This shear will fit any hand-power Stewart Sheep Shearing Machine.

STEWART HORSE CLIPPER HANDLE AND KNIFE COMPLETE, 3 INCH.

Each.

No. C—1-Horse clipper handle and knives complete, weight 20 oz....$3.50

No. 90—Top Plate, weight 3 oz...ey 1.00
No. 89—Bottom Plate, weight 5 oz... 1.50

STEWART LATEST MODEL CUTTING HEAD, 3 INCH, PATENTED.

Caution—Do not file or grind any part of the clipping head in any way. It is exactly right to cut best. The only grinding to be done is to resharpen the cutting plates when they get dull, and that must be done right.

Be sure to let parts Nos. 358 and 359 alone. If they should be removed in any way, except when plates are to be sharpened, then do not attempt to use the clipper head until they are properly replaced.

Each

No. B1—Stewart Latest Model Horse Clipper; handle and knife complete, weight 20 oz.....$3.50
No. 360—Top Plate, weight 2 oz.... 1.00

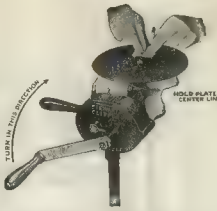
No. 361—Bottom Plate, weight 3 oz..1.50

POWER DENTAL FLOAT.

Can be attached to any Chicago clipping machine. This instrument is cast from the best quality brass, and is highly nickel plated. It keeps a horse's teeth in good shape. It enables him to chew his food properly, and improves his digestion and health as a consequence.

Each.

Chicago Power Float.....$4.25
Extra Files for Chicago power float. .50



Can be attached in a moment to either the Stewart No. 1 Horse Clipping Machine or the Stewart No. 3 sheep shearing machine. It is put on in place of the shaft; the change can be made in a few seconds. A few turns of the crank handle makes dull knives sharp, so they will cut like new. This grinder is constructed of metal throughout.

Each.

No. 11—Grinder, complete, ready to attach to clipping or shearing machine, weight of each 9 lbs.....$4.50

If it is desired to run it by power a pulley may be substituted for the crank

Sharpens a sheep shearing knife in a few seconds, good as new.

No skill required; it is automatic.

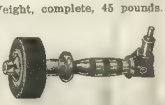
Each

New Automatic Sheep Knife Grinder $10.50

New Automatic Horse Clipper Knife Grinder 10.50

New Automatic Sheep and Horse Grinder 11.00

Weight, complete, 45 pounds.



Grinding, drilling and toe calk sharpening attachment for Stewart sheep shearing machine. To attach, merely remove the shear and put on the grinding attachment.

Each

No. SGA—Stewart Grinding Attachment.....$5.50

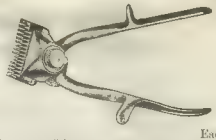
Liberty Plain 00—Nickel plated, 1/32 inch, cutting, cage concealed spring, corrugated bottom plate, length 5½ inches; width of bottom plate 1⅜ inches; weight 3 ounces. **$5.50**

Liberty Sanity 00—Ivory finish handles, nickel plated head, otherwise same as above. **6.20**

Prepaid on any . .

FETLOCK CLIPPERS.



Each

No. 771—Nickel plated; adjustable tension spiral spring; smooth bottom plate, width 1⅞ inches; length, 6 inches. **$5.70**

No. 671—As No. 771, but is fitted with concealed three-coil spring instead of a spiral spring; length of clipper, 5½ inches. **3.50**

HORSE CLIPPERS.

This is a medium grade clipper; has single nut and center tension.

Each

No. 179—Polished steel; rubberoid handles; length, 11 inches; width of bottom plate, 3¼ inches; weight, 14 ozs. **$4.50**

The pressure cap of this clipper is made of sheet steel instead of malleable casting. It is neater, lighter and produces a smooth motion in operation.

Each

No. 129—(New Market Pattern) highly polished steel; rubberoid handles; length, 11 inches; width of bottom plate, 3¼ inches. **$5.20**

This clipper has a hardened steel case in which the bearings travel.

Each

No. 159—Anti-friction; ball bearing perfect in construction; nickel plated has rubberoid handles; length, 11 inches; width of bottom plate, 3¼ inches; weight, 1 lb. **$6.50**

Incandescent Electric Headlights

No. 1663 Incandescent Headlight

18-inch

The accompanying illustration represents a design of unusual merit—is furnished with extra deep reflector (13¾ inches) and lends itself admirably to localities where greater penetration is a factor. This style, as well as those shown on preceding pages, is wired so that electrical connections are made automatically when slide and reflector are in proper place. Provision is also made to illuminate the side frames by means of an auxiliary lamp, which burns independently—arrangement is made for a lamp in front of the reflector to be used as a dimmer, controlled by switch in the cab.

The case is constructed of heavy steel, properly balanced to reduce vibration and is electrically welded—door hung in the most approved manner, reinforced and supported by substantial malleable hinges.

Price..... each $60.00

New Style Locomotive Oil Headlight

No. 1596 -23-Inch

Used by Some of the Leading Lines Where Requirements Are Necessarily Severe.

While the styles already shown have been thoroughly satisfactory for the purpose intended measures now in force in some districts demand a greater volume of light of somewhat longer range and diffusion

In order to meet this condition recourse is had to a reflector of sufficient size and of the proper depth, being focused with a burner of ample capacity.

The frame or housing identical to that shown on opposite page, is of rigid construction, electrically welded, provided with spacious side number frames and supported in a manner to reduce vibration

Specifications of Headlight: Case, heavy sheet steel electrically welded. Height over all 35 1/2 inches depth over all 23 1/2 inches width over all 26 1/2 inches; bottom support, distance between center of bolt holes, depth 13 1/2 inches, width 20 1/2 inches, front glass diameter 23 inches Reflector copper silver plated chuck No. 2—22 inches diameter 14 inches deep focal 21 1/8 inches, burner No 106, Page 229, chimney No. 93 or 94

New Style Locomotive Oil Headlight

No. 1596D 23-Inch

Used extensively in districts where traffic regulation demands an adequate headlight

The accompanying illustrations serve to introduce a new design, the result of much study and effort to produce an oil headlight whose qualities and general workmanship would commend it to those seeking a more dependable article

A glance at the cuts indicate a departure from the usual method of construction, especially as regards the reflector which is mounted in conjunction with a mirror so arranged to permit of adjustment and detachment when necessary to clean A combination of this character insures comparative ease in cleaning and maintaining a bright reflecting surface

New Style Locomotive Headlight

No. 1531

18-Inch

Used extensively in localities where more light is required.

Certain measures in force throughout several states make it imperative to use oil headlights of greater capacity than formerly employed

The plain case headlight, illustrated hereon, has been found to possess the necessary requisites and is recommended Made of heavy sheet steel—electrically welded insures stability and consequent long life—reflector, a true parabola, is of the proper dimensions necessary to project a volume of light within the scope of its requirements and is made possible by introduction of suitable burner of higher candle power

ROLLING STORE LADDERS

✠MILBRADT

MADE TO ORDER ONLY

Made in Various Styles to Fit All Kinds of Shelving. Shipped Complete Ready to Install

Made of Hardwood Lumber, Highly Finished; Steps Dadoed into Sides and Screwed in a Most Thorough Manner; Brackets and Fixtures are Malleable Iron, Nicely Finished; These Ladders Take up Very Little Space and Run Without Noise or Friction; a Slight Push Will Propel Ladder the Length of an Ordinary Store; an Extra Wide Shelf at the Top of Each Ladder is Very Convenient in Handling Stock.

BENT LADDERS

For Track Fastened to Shelving Near Top, Short Fork Shaped Irons with Rod Rollers, Run Against the Edge of Wide Base Shelf; Runs on Round Steel Track.

	Each
No. 1—Width 17¼ inches; 3 inch Side Pieces; 3½ inch Steps; 9 inch Top Shelf; Complete with Fixtures; Average Shipping Weight 50 lbs.	$26 00

BENT LADDERS

For Shelving Where the Next Shelf is Greater Width of Latter than Base Shelf of Ladder; Rollers Ride on Front Edge of Upper Shelf; Rollers are Concave Faced; Runs on Square Hardwood Track, Only, to Guide Ladder.

	Each
No. 2—Width 17¼ inches; 3 inch Side Pieces, 3½ inch Steps, 9 inch Top Shelf; Average Shipping Weight 50 lbs.	$26 00

BENT LADDERS

Fastened to Shelving Near Top, Short Fork Irons with Rollers Ride on Front Edge of Narrow Base Shelf; Angle Made to Fasten Near Shelving; Runs on Round Steel Track.

	Each
No. 3—Width 17¼ inches; 3 inch Side Pieces, 3½ inch Steps; 9 inch Top Shelf; Average Shipping Weight 50 lbs.	$26.00

For Track, Brackets, etc., See Page 3121

TO ORDER ABOVE LADDERS

Give Height from Floor to Top of Base Shelf, Width or Projection of Base Shelf from Front Edge of Uprights, and Height from Top of Base Shelf to Top of Shelf to Which Track is to be Fastened. If Base Shelf, or Base Shelf and Next Shelf, Project Beyond Front Edge of Shelving; When Ordering Ladder No. 2, Where Bent Steps Start; How Much Each Step is to Project; Width of Top Shelving; Where Fixtures Are to Be Taken, If Ladders are Ordered for Odd or Irregular Shelving, a Full Size Sketch of Side View of Shelving is Sent Us.

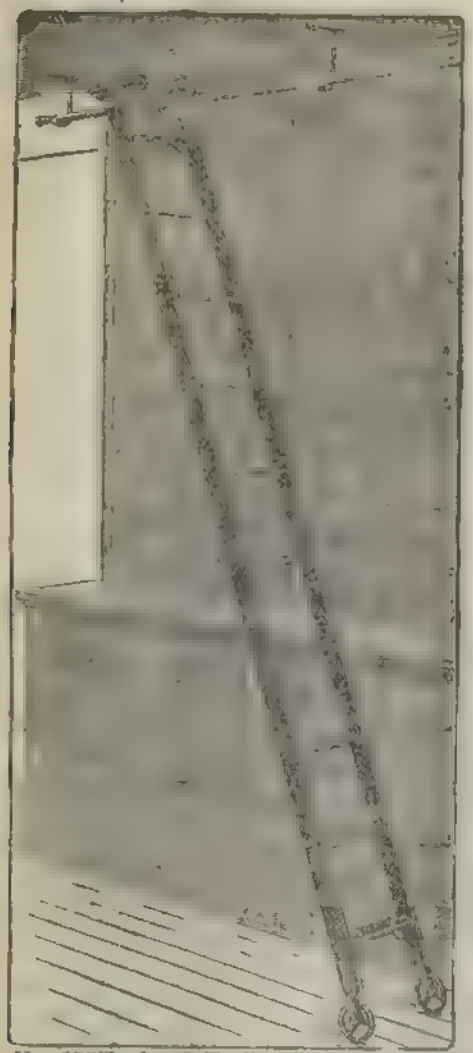
MILBRADT

MADE TO ORDER ONLY



TROLLEY OR CEILING LADDERS

For Steel Track Fastened to the Ceiling, Rubber Tired Wheels Run Noiselessly on the Steel Track; Cushion Tired Wheels at the Bottom Run on the Floor; the Track is Made of Round Tubing and Rests in Malleable Iron Brackets, which are Screwed to the Ceiling About 4 feet Apart, or so the Lag Screws will Enter the Joists; if the Ceiling is Plastered, a Board 7 inches Wide Should First be Nailed or Screwed to Ceiling and the Brackets Screwed to the Board; in Every Instance, the Lag Screws Must Enter the Joists; Ceiling Board Not Furnished, Unless Specially Ordered.

This Ladder is Strongly Made and with Sufficient Incline to Make Easy Climbing; it is Especially Adapted for Hardware Stores, Wholesale Houses or Other Places where Heavy Goods are Handled; it Runs Independently of Shelving and is the Most Suitable to Use when Shelving is Not so Arranged that Ladders Can be Conveniently Applied to it.

Each

No. 15—Width 14 inches; 4 inch Side Pieces, 5 in L. Steps; Complete with Fixtures; Average Shipping Weight 60 lbs **$24.00**

Per Foot

No. 15ST—Steel Trolley Track, for Above Ladder Including Brackets and Lag Screws; Weight per Foot 1½ lbs. **$0.50**

No. 15CB Ceiling Board, 7 inches Wide, for Use on Plastered Ceilings, with Above Ladders, Weight per Foot 1½ lbs. $0 20

To Order Above Ladder—Give Exact Height from Floor to Ceiling and State Exact Length of Each Run of Steel Track Wanted.

TRACK BRACKETS

Used to Hold up Steel Track which is Attached to Shelving they are Screwed and Bolted on Top of Shelf; Used in Connection with Nos. 7 or 8 Brackets Shown Below, on Shelving where Uprights to which Brackets can be Fastened are Too Far Apart to Make Track Strong Enough.

Each

No. 9—Malleable Iron, Weight ½ lb. **$0 90**

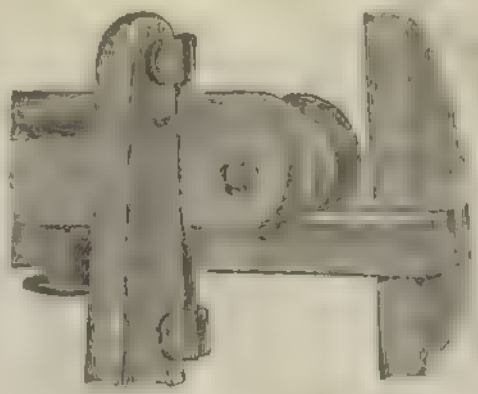
LADDER PLATFORMS

For Use where Stock is to be Put Up, Taken Down or Rearranged. It is Large Enough for Use to Stand on Conveniently and Allows the Free Use of Both Hands; it can be Attached at any Height Desired and will be Found Very Handy wherever Rolling Ladders are Used; it is Absolutely Safe.

Each

No. 31P—Solid Oak Platform, Nickel Plated Hangers, Weight 4 lbs. **$4.00**

LADDER TRACK



SPECIAL WOOD TRACK

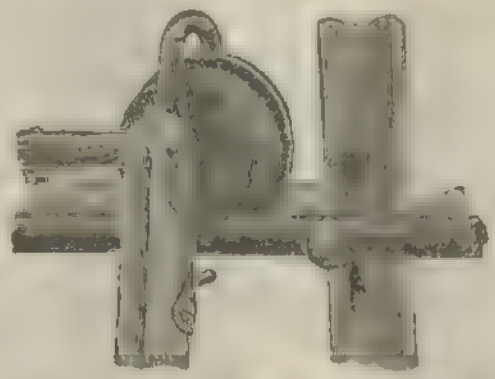
Hard Dry Maple; Finished to Match Ladder; Adapted for Ladders which Run on the Floor; Requires no Special Shelf or Arrangement.

Per Foot

No. 2WT—For Ladder No. 2; Weight per Foot 2 lbs. **$0 30**

STEEL TRACK

Made of Round Steel Tubing; For Ladders Nos. 1, 3, 4, Shown on Previous Pages.



Showing Face Bracket No. 7; For Uprights 2 inches or Wider

Per Foot

No. 1R—Regular, for Use on Steel Track for Uprights to which Brackets are Fastened Lengthwise of Upright, Complete with Required Screws, Weight per Foot 1 lb. **$0 50**

Showing Upright Bracket No. 8; Specially for Uprights Less than 2 inches Wide.

Per Foot

No. 1H—Extra Strong; for Use on Shelving where Uprights are More than Four Feet Apart; Can be Used with Brackets 5½ feet Apart; when Uprights are More than 5½ feet Apart it is Necessary to also Use No. 9 Bracket Shown Opposite, between Uprights, Weight per Foot 1½ lbs. **$0 40**

HOW TO ORDER STEEL TRACK

The Longest Length of Steel Track Made is 18 feet; if Track is to be Longer than 18 feet, Two or More Lengths are Joined Together; Furnished in Such Lengths as Will Leave Joints Over Center of Uprights or Partitions in Shelving, which will Bring the Joints Over Brackets. The Difference Between Length of Track and Length of Shelving Must Not Exceed 3 inches; Short Track for the Entire Line of Shelving.

First—Give the Entire Length of Each Line of Shelving.

Second—Measure from Outside of One End of Shelving to Center of an Upright or Partition Nearest to, but Inside of 18 feet from Starting Point; Give this Measurement, then Begin from the Center of the Last Upright or Partition Measured to, and again Measure to the Center of the Next Upright or Partition Nearest to, but Inside of 18 feet from Starting Point, and so Continue to Measure for as Many Lengths as are Required.

Modern Electric Street Lighting

A Discussion of Incandescent and Arc Lamps from the Standpoint of Illumination

By S. L. E. Rose and H. E. Butler

THE earliest form of street lighting consisted of lamps placed in the windows of houses for certain specified hours each night, and probably the first street lighting company on record was organized by an Italian abbot, Landati Caraffa, in Paris, about the sixteenth century, whereby torch bearers were furnished to guide people thru the streets at night, for which a fixed charge per hour was made. The next development was street lanterns, and as early as 1745, it is said, reflectors were used on these lanterns.

In 1879, Thomas A. Edison perfected the electric incandescent lamp, and shortly after lighted the roads and paths at Menlo Park, which was probably the first incandescent electric street lighting system in this country. It was not until about 1900, however, that incandescent electric lamps were extensively used in street lighting.

About 1880 Thomson brought out the open arc, which gave a great impetus to street lighting by electricity. This was followed by the enclosed arcs, which were placed on the market about 1895 and marked a step forward in electric lamps for street lighting.

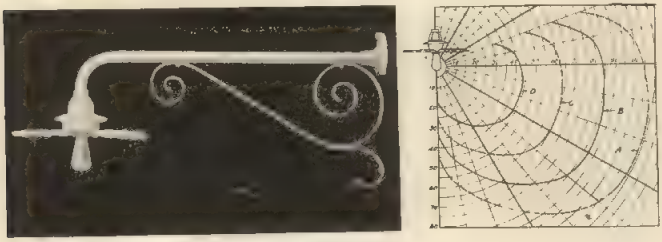
In 1905, the luminous or magnetic arc lamp was developed; this was a distinct advance both in efficiency and light distribution. The improvement since that time has been mostly in electrodes and minor changes in the lamp itself.

It was about 1908 that tungsten filament lamps were first used for street lighting, and the growth since that time has been rapid. In 1911 the tungsten filament, or Mazda, lamps, as they are now called, were available in sizes up to 350 candle-power, while in 1916 lamps of 1,000 c. p. were in common use, and to-day 1,500-c. p. lamps are being used in some places. A study of the advances in efficiency made both in incandescent and arc lamps shows that the enclosed flame arc is slightly higher in overall efficiency than the luminous arc. In street lighting, however, overall efficiency is not always the deciding factor. Other factors, such as maintenance, operation, candle-power distribution, and available accessories, such as the prismatic refractor, etc., enter into the problem, with the advantage in favor of the luminous arc or Mazda lamp. Very few systems of street lighting with flame arc lamps were ever installed in this country, and this lamp is now practically obsolete as a street lighting unit. Furthermore, the flame arc was available only in one size, and, therefore, adapted for only one class of lighting where large units could be used.

So long as incandescent lamps were not available in large candle-power units, the arc lamp had no serious competitor for street lighting. With the advent of the large incandescent series lamps, however, conditions were changed, and to-day units suitable for all classes of street lighting are available in both arc and incandescent lamps. The selection is usually governed by local conditions.

Probably the greatest advance in street lighting accessories was the development of the Holophane prismatic refractor, which gives a control of light distribution hitherto unattainable. It can be used on either arc or incandescent lamps, its use being made possible by the fact that with the magnetite arc lamp the arc does not travel down as far as it does on the open and enclosed carbon arcs, and with Mazda lamps the filaments have been concentrated into a much smaller space than on the older incandescent lamps.

Utilitarian lighting is usually accomplished by means of pendant units mounted on bracket arms along one side of the street, while for ornamental lighting the units are mounted on the tops of poles and placed on both sides of the street, arranged either parallel or staggered. As the name implies, an ornamental system uses diffusing or other ornamental glassware, and the esthetic effect is obtained by some sacrifice in the efficiency of the unit. In a system of this kind, the upper stories of the buildings receive light from the unit and the



FLAT RADIAL WAVE REFLECTOR UNIT WITH THE LIGHT DISTRIBUTION FOR VARIOUS SIZED LAMPS

street receives back some of the upward light by reflection and diffusion from the building fronts.

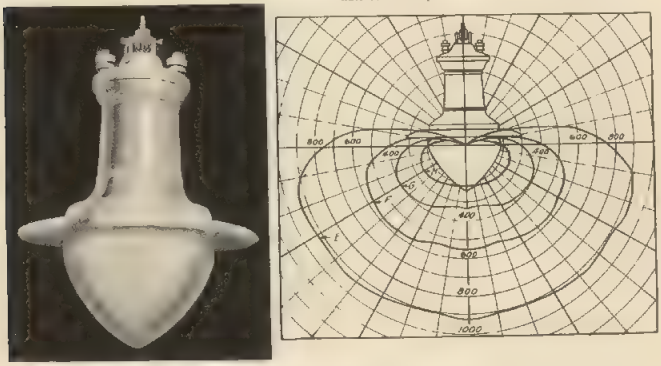
Obviously, intensities will vary with the class of service; i. e., outlying districts will not require as high an intensity as important residence streets, and the residential districts will not require the intensity of the business districts. In the various districts the important streets are usually given preference over the side streets as regards intensity of illumination.

The following table gives an indication of the illumination intensities required for various classes of service, but local conditions may necessitate a variation from these values, and a further development of the art may see them materially increased, as evidenced by some recent western installations:

	Average Horizontal Illumination Foot candles*
Principal streets in cities	0.25 to 1.00
Important side streets	0.10 to 0.25
Residence streets	0.01 to 0.05
Suburban roads ..	0.005 to 0.01

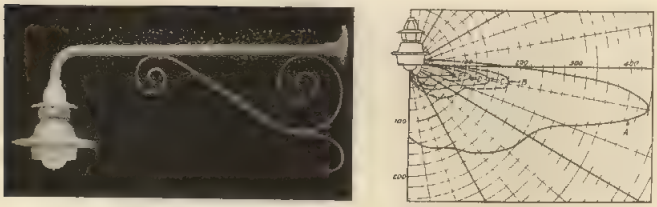
In using this table it should be borne in mind that the color or reflecting power of the pavements and buildings has a marked effect on the illumination of a street. Buildings or pavements having dark-colored or dirty surfaces require a higher intensity of illumination than those having light-colored surfaces, in order to appear equally well lighted.

*Illumination is expressed in *foot-candles*. A *foot candle* is the normal illumination produced by one unit of candle-power at a distance of one foot



PENDANT UNIT WITH DIFFUSING GLASS GLOBE AND REFLECTOR

Note spherical distribution of light generally below the horizontal



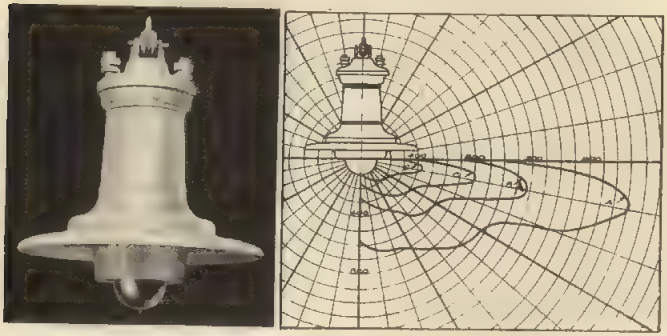
PRISMATIC REFRACTOR UNIT WITH LIGHT DISTRIBUTION CURVES

Clear glass globes are seldom seen to-day on large candle-power units, on account of the high intrinsic brilliancy of the light sources, but if clear glass globes are used, the units should be suspended as high as local conditions will permit. Diffusing glass globes or similar glassware will reduce the glare, and, tho lowering the efficiency of the unit as a whole, they may increase the ability to see.

Ornamental or "white-way" installations are becoming more and more popular as advertising features for cities. Business men realize the advantages of an ornamental lighting system in attracting crowds to their street and are usually willing to help financially in the installation. Civic improvement leagues and associations also realize the advantage to their city in such a system and usually support the movement

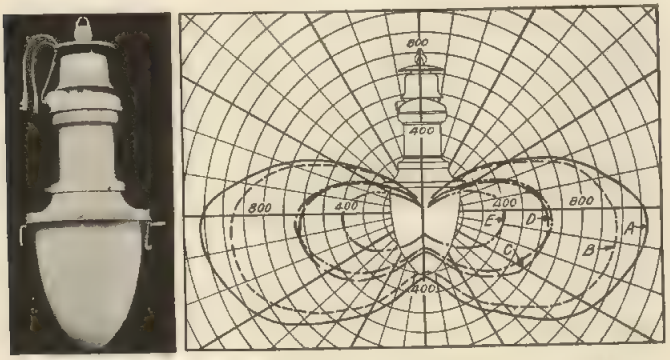
Street Lighting with Series Lamps

One of the most efficient methods of lighting streets to-day is the series incandescent lamp. It can be equipped with a variety of accessories suitable for all types of outdoor lighting, from the rural highway type to the so-called "white-way" or ornamental system in a business district. Various equipments of glassware and reflectors, together with a wide range of candle-power sizes, give a flexibility which adapts this lamp to almost every condition to be met in street lighting service. Never before has there been so large a number of units to select from, which will meet both small and large appropriations and give satisfactory results.



PENDANT UNIT WITH PRISMATIC REFRACTOR AND REFLECTOR

Light is here given a greater horizontal component



PENDANT TYPE LUMINOUS ARC LAMP WITH DIFFUSING GLASS GLOBE

Data on Incandescent Series Lamps

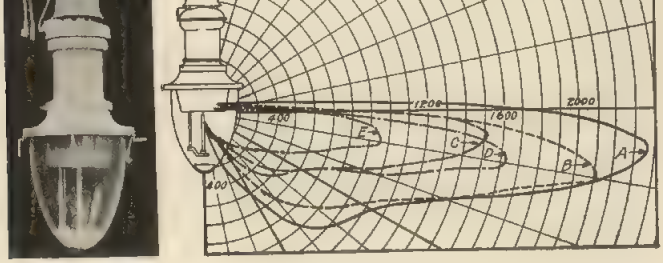
Nominal Rated Candle-Power	Total Lumens*	Watts 6.6 Amperes	Watts 7.5 Amperes
40	430	35	36
60	660	46.8	48
80	860	60	60
100	1060	72	72
250	2600	156	147
400	4000	244	228
600	6000	368	344

* The total flux of light from a source is equal to its mean spherical intensity multiplied by 4π (12.57). The unit of flux is called *lumen*. A *lumen* is the $\frac{1}{4\pi}$th (0.0795) part of the total flux of light emitted by a source having a mean spherical intensity of one candle power.

For outlying and residence districts, especially where shade trees line the streets, small units, which can be hung low and spaced at frequent intervals, will give better results than large units spaced at relatively long intervals.

Street Lighting with Arc Lamps

The most efficient and useful arc lamp for street lighting to-day is the direct-current, series, luminous or magnetite arc lamp. It is economical to maintain and reliable in operation. It is made in two types, one for pendant lighting and one for ornamental or "white-way" lighting. It can be equipped with clear or diffusing glassware, or with a prismatic refractor. Long-life and high-efficiency electrodes are avail-



PENDANT TYPE LUMINOUS ARC LAMP WITH PRISMATIC BAND REFRACTOR

Showing the characteristic horizontal diffusion of the light

able which, when operated at various currents, give a wide range of candle-power to this unit.

Data on D. C. Series Luminous Arc Lamps

Pendant Type		Ornamental Type

5	388	5	403
6.6	510	6.6	532

Street Lighting Contracts

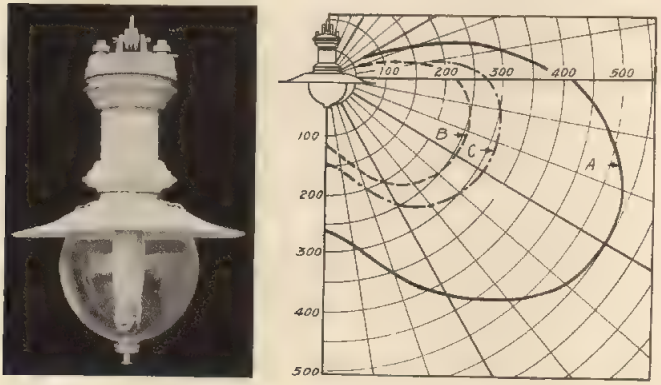
A great deal of trouble and misunderstanding between central station and city officials has been caused in the past, where the lighting plant is not municipally owned, by street lighting contracts not being specific enough. This matter has been receiving more and more attention by the national engineering societies and by various states.

Committees have endeavored to draft model contracts that would serve as guides, but the work is not so easy of accomplishment as it might seem, owing to the different conditions prevailing in various localities.

A great many factors that enter into this problem make it extremely difficult to draft a satisfactory street lighting contract. This condition results from the wide diversity of opinion as to what constitutes good street lighting and as to what is the best basis upon which different systems may be fairly and equitably compared. Some favor uniform over non-uniform lighting; some favor staggered over parallel arrangement of units; and some favor hanging the units over the center of the street instead of along the curb line. What are the relative advantages of each of these it is rather difficult to state on account of the lack of sufficient data and because what is best in one case may be entirely unsuitable in another, on account of a change in conditions.

Interior lighting practice is standardized to a great extent. There is a fairly close agreement as to the intensities required for various classes of interior lighting, but street lighting practice is not so well standardized, nor is it likely to be until the problems mentioned previously, and many others, have been solved. It is usually not a question of how much light should be given to this street or that, but on what will be the irreducible minimum, or of accommodating the street lighting system to an appropriation which is usually much too small

It is quite generally agreed that the best method of comparing lamps or lighting units as regards their efficiency as light generators is on the basis of total lumens per watt (spherical candle-power x 4π). The total lumens will be a maximum when



ENCLOSED CARBON ARC LAMP WITH LIGHT OPAL GLASS INNER GLOBE, CLEAR GLASS OUTER GLOBE AND STREET REFLECTOR

the lamps have the least possible equipment; they will be greater with a clear globe than with a diffusing globe, and will gradually decrease as equipment is added. It can, therefore, be readily understood that it would be unfair to compare two units for efficiency, one having a clear globe and the other a diffusing globe. Obviously, the total lumens will vary with different densities of diffusing globes. Before writing contracts, therefore, it is advisable to know the energy consumed and the characteristic candle-power distribution of the equipment it is proposed to use. These can best be obtained in a properly equipped laboratory. The contract should specify the lamp equipment, operating conditions, etc., and if the specifications are complied with, the city will get its full measure of illumination. It is a comparatively simple matter to check up the energy consumed, but the making of satisfactory candle-power or illumination tests in the street is both difficult and expensive, especially during the winter months,—and that is when the lights are most used. There are some variations in individual lamps and equipment from the ideal aimed at in manufacture, and the contract should not be too rigid and should not impose unnecessary restrictions on the central station, or the increased cost of service will be more than the supposed advantages are worth.

Advances in the art may make a change desirable, and some means of doing this should be provided for on a fair and equitable basis to both parties. It would seem as if the best service and lowest rates can be obtained only by a close coöperation between all the parties concerned before the contract is written and signed.

Sootless Saturdays

By W. A. Mohrbacher
Chief of Fire Department, Cedar Rapids, Iowa

COALLESS Mondays, meatless Tuesdays, wheatless Wednesdays, porkless Saturdays—how about sootless Saturdays?

Our citizens are loyal in their efforts to conserve fuel, meat and wheat, and to economize along almost every line, but they seem to forget about "conserving" by preventing the total consumption—the entire wiping out— of their homes by fire, to say nothing about conserving on expenses incident to the calling of the fire department.

Every time the fire department answers an alarm there is an expenditure of the taxpayers' funds in the wear and tear on the apparatus, in the use of gasoline for motor apparatus and in the upkeep of the teams in use by the department. Then there is also the ever-present possibility of accidents and their dire results. During the month of December the fire department of Cedar Rapids answered 71 fire alarms, and of that number 31 could be traced to soot that had accumulated in flues since the weather became cold enough for furnace fires. Most of these alarms came from neighborhoods where modern furnace-heated homes predominate.

Students of fire prevention account for these alarms as being due to the desire for quick, hot fire in furnace-heated homes. Soft coal is used, the drafts are all opened, and red-hot soot is carried out by the draft onto a wooden shingle roof. The result is a fire alarm and the attendant expenditure of the taxpayers' money. Of course, the fire department is commissioned to answer fire alarms and not to worry about how taxes are spent, but the living conditions of every one of us are affected by such waste and loss as this, and there is always the danger that some time the department may be out at a chimney fire and a real fire will start which might be controlled if the department could get the water onto it without delay.

Many patent soot removers are on the market, chimney sweeps are available, and the people can burn scraps of zinc in the furnace, which will help remove the soot without blowing it out as a chunk of red-hot coal upon the roof.

Saturday is suitable for a set-to against soot, so let housekeepers devote the day to this phase of conservation.

REACH'S FIELDERS' GLOVES

This illustration shows the Reach Patented Diverted Seam—patented March 10, 1908—the greatest invention in gloves. The weakest part of a glove has been at the base of the fingers, where the seams assemble. We have strengthened this by diverting the seams so that they run up the side of the finger, thereby doing away with an extra seam at this point. This patented feature is used by us in all grades of gloves, making them the strongest on the market.

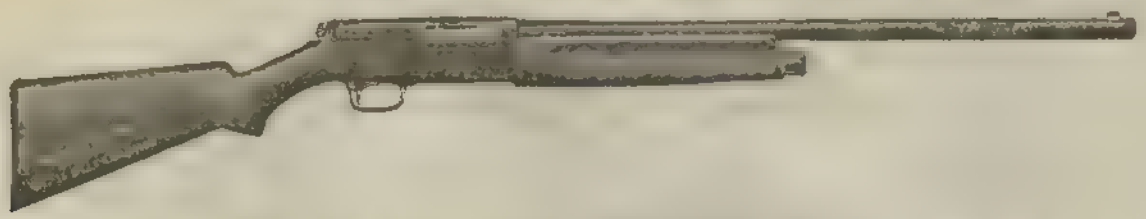
WINCHESTER REPEATING SHOT GUNS



MODEL 1911, SELF-LOADING, TAKE DOWN, 5 SHOTS

The Winchester Self-Loading Shotgun is a recoil operated hammerless, take down, five shot repeater. The recoil developed by the discharge of the gun forces the barrel assembly rearward, and from the recoil from the cartridge in the chamber and leaves the gun ready to be shot again. As the trigger must be released before each shot, the gun is at all times as completely under the control of the user as any double or single barrel gun. The loading and shooting of this gun being governed by the trigger finger, it has been aptly called the "Trigger Controlled Repeater."

Nickel Steel Construction: The barrel, receiver, magazine and all working parts of this gun throughout are made of Nickel steel, which has a far greater tensile strength and elastic limit than the steel used by other makers. The magazine tube and front sight are integral with the barrel, the whole piece being machined from one solid forging. This is much stronger and more lasting construction than when these parts are made separately and brazed to the barrel.

Barrel: Nickel Steel, Matted Finish, 26 and 28 inches Long; Chambered for 2¾ inch 12 Gauge Shells; Rifle Style Sight, made Solid with Barrel and Tipped with a Bright Point of Tin.

Stock: Plain Walnut, Pistol Grip; Length 13¾ inches, Drop at Comb 1⅝ inches, Drop at Heel 2⅝ inches; Rubber Butt Plate.

Receiver: Nickel Steel, Blued Finish. Matted on top along the Line of Sight.

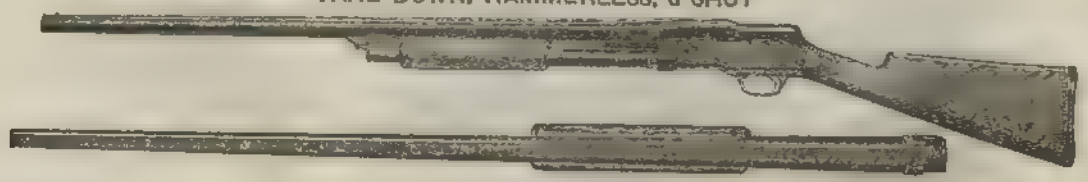
STEVENS REPEATING SHOT GUNS

TAKE DOWN, HAMMERLESS, 6 SHOT



Cut Shows Matted Rib on Barrel of Stevens Trap Gun

TRAP

Barrel—Stevens Compressed, Forged Steel, Matted Rib. The Barrel Used in the Manufacture of this Gun is First Compressed and is then Forged into Shape, thus Making it as Strong as it is Possible to Make a Shot Gun Barrel. It is Finished in Black Oxide, which Gives it a Beautiful and Lasting Appearance. Will Handle Any Standard Shell up to 2¾ inches.
Receiver—The Receiver is a Solid Drop Forging, and in the Manipulation of the Gun None of the Interior Parts Protrude that Usually Interfere with the Pleasure and Safety of Shooting a Repeating Shot Gun. This is One of its Most Valuable Features. It has the Same Black Oxide Finish as the Barrel. The Tangs to which the Stock is Fitted are Extra Long and Add Strength to the Stock at its Weakest Point. Shells are Ejected from the Side, which is the Most Popular Method in Use, as the Shells are Ejected Away from the Shooter.
Stock—Fancy Walnut; Straight Grip, Fancy Checkered Rubber Butt Plate. Length 14 inches, Drop 2¾ inches.
No Deviation from Stock Dimensions, under Any Circumstances

No. SRT12—12 Gauge; 30 inch Barrel; Full Choke Bored; Weight 7¾ lbs. ..... Each **$67.00**

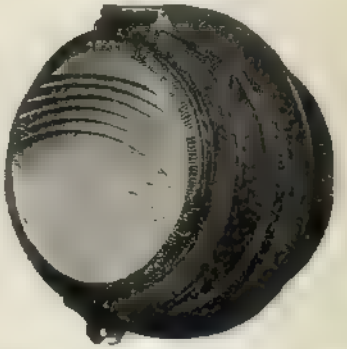
Improved Electric Incandescent Street Car Headlights

Class A
For Mounting Outside of Dash

No. 1646A. 8-inch. With Deflector Lens and Copper Silver-Plated Reflector

No. 164b. 8-inch. With Plain Glass in Door and Golden Ray Reflector

Class B
Set-In Dash Type



No. 1661A. 8-inch. With Deflector Lens and Copper Silver-Plated Reflector

No. 1661. 8-inch. With Plain Glass in Door and Golden Ray Reflector

These headlights will be found suitable for city cars and will provide ample illumination

For prices, see page 193

For shipping weights and export measurements, see page 192

Improved Electric Incandescent Street Car Headlights

Classes A and B

Designed Particularly for City Cars

Accommodates G18½ round, concentrated filament railway type Mazda lamp

No. 1646B 8-inch Wide Plain Glass Door and Copper Silver Plated Reflector

No. 1661B 8-inch Wide Plain Glass Door and Copper Silver Plated Reflector

The groups are divided in two classes, being designed to attach to outside of dash, and arranged to be set into the dash

Both classes are constructed of reinforced sheet steel and possess relatively the same illuminating capacity and lend themselves admirably for the purpose intended all doors are interchangeable with their respective class and will accommodate either plain glass or the deflector lens, and may be provided with guard, affording protection to glass

Both styles will permit use of the Golden Ray glass reflector or may be supplied with copper silver-plated reflector and will admit of means for effective focusing, whereby the reflector is hinged to case and when released exposes the entire focusing device insuring ease and accuracy in making adjustment When ordering please state if this feature is wanted, or whether reflector is required to be rigidly fastened to case

The headlights thus described embody all the essentials requisite for their proper performance are neatly designed and of light weight, in perfect accord with present day requirements When ordering class B set in type, please designate permissible projection in rear of dash

For complete specifications, see page 191

For shipping weights and export measurements see page 192

For prices see page 193

Improved Electric Incandescent Street Car Headlights

Class C

Designed to Be Set in Dash Board

Practically [illegible] and will be found suitable where space is limited (2½ inches) between dash and [illegible]

No. 1641 10-inch With Plain Door, Enameled Steel or Polished Aluminum Reflector

No. 1640 [illegible] With Grill Door, Enameled Steel or Polished Aluminum Reflector

No. 1642 8½-inch With Plain Door, Enameled Steel or Polished Aluminum Reflector

No. 1643 8½-inch With Grill Door, Enameled Steel or Polished Aluminum Reflector

These headlights are [illegible] for use [illegible] corrugated [illegible] where [illegible] and [illegible] is restricted

Improved Electric Incandescent Street Car Headlights

Class C

Designed for City Cars. To be set in Dashboard. Accommodates any Edison base round or pear shaped lamp 16 to 32 candle power.

The headlights are designed to meet the demand of city railways for a flush headlight, or one that will not project much beyond the dash, thus offering protection to a great extent in case of collision or other accidents.

These headlights are constructed in a most substantial manner, the casings and doors are cast iron, strongly supported and provided with strap catch, door hinged at top and closed by gravity, cannot carelessly be left open.

The styles shown are furnished with two types of reflectors, polished aluminum or white porcelain enameled steel, are interchangeable, are all the doors the grid type having cast iron ribs integral with the door protecting the glass without sacrificing the light to any marked extent.

These headlights require a hole in dash 11 inches in diameter; they project back of the dash 2¼ inches, while the projection in front of the dash is but 2 inches for the plain type door, 2½ inches for the grid type, 3 inches for the semaphore door and 3½ inches for guard type.

Provision is made for focusing lamps of various sizes and shapes, permitting the filament of the lamp to be adjusted to the focal point of the reflector.

For complete specifications, see page 191.

For shipping weights and export measurements, see page 192.

Quotations include the porcelain lamp socket, but not the incandescent lamp.

For prices, see page 193.

Improved Electric Incandescent Street Car Headlights

Class D

Front Perspective View

Designed for city cars—to be attached to front of dash projects 5¼ inches in front of car

No. 1609

8¾ Inch

In order to meet the demands for a headlight possessing all qualifications conducive to efficiency, yet moderate in price, prompts us to offer the style shown, which is intended to be attached to the front or outside of dashboard Its construction is entirely of grey iron. A removable porcelain enameled reflector insures excellent results and is considered an improvement over the time honored plated reflector. The arrangement of the lamp socket is such that it permits the lamp to be suspended from the top thus providing against short circuiting as sometimes happens when lamp is placed in an upright position, due to moisture collecting in and about the socket

For complete specifications, see page 191

For shipping weights and export measurements see page 192

Quotations include the porcelain lamp socket, but not the incandescent lamp

For price see page 193

Rear Perspective View

Improved Electric Incandescent Street Car Headlights

Designed for City Cars To Be Set Into Dashboard

Pressed Steel Headlight

No. 1583

8¾-Inch Pressed Steel

Accommodates any Edison base, round or pear-shaped 60 watt lamp.

The illustration represents a substantial light weight, pressed steel headlight arranged to be set into the dash. The inner surface of body is white porcelain enamel and serves the purpose of a reflector—or may be supplied with [illegible] silver plated reflector and ribbed door glass or with plain glass in door. Cast Iron Headlight

No. 1631

8-inch Cast Iron Headlight

Accommodates G-18½ round concentrated filament railway type Mazda lamp.

This design offers a compact, serviceable, set-in type headlight, made of cast iron throughout. Is artistically furnished with copper silver-plated reflector and plain glass in door and permits of modifications described above.

For complete specifications of both headlights, see page 191.

For shipping weights and export measurements of both headlights, see page 192.

Quotations do not include the incandescent [illegible]
For prices, see page [illegible]

Improved Electric Incandescent Street Car Headlights

Designed for City Cars—To Be Set Into Dashboard

No. 348J

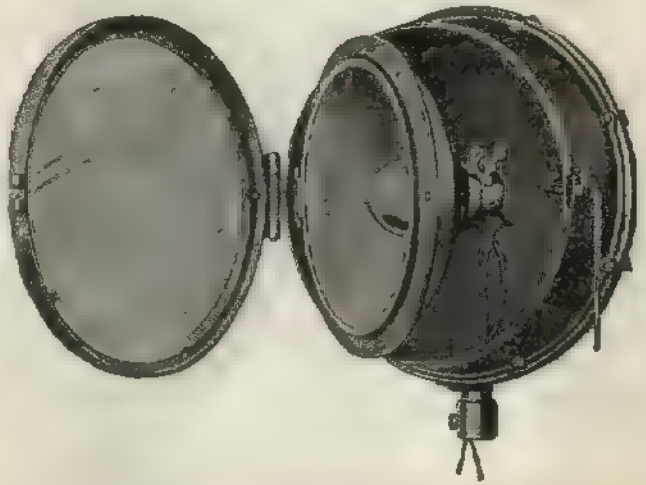
10-Inch Improved Cast Iron Headlight With Hinged Reflector

Accommodates G-18½ round, concentrated filament railway type Mazda lamp

The accompanying cuts illustrate an improvement in this standard set-in type cast iron headlight, which is particularly adapted to city cars. The reflector either copper silver-plated or Golden Ray glass, is hinged to casing, affording easy access to the lamp and focusing device, and when furnished with the deflector lens, as shown, secures a greater volume of glareless light. This manner of focusing and method of reflector arrangement may be furnished to those having the old rigid type of reflector in service and will increase the lighting capacity three fold at a nominal expenditure

For complete specifications, see page 191

For shipping weights and export measurements, see page 192.



View of Above Headlight Showing Reflector Hinged, Admitting Ready Access to Lamp and Focusing Device

Quotations do not include the incandescent lamp
For prices, see page 193

MOSSBERG.

TRIPLE END SOCKET FOR FORDS.

Has two openings of 41/64 inches for use on cylinder head cap screws and one opening of 33/64 inches to fit nuts on rear axle housing.

Each

No. 630—Triple End Socket Wrench; for Fords.....**$0.86**

Weight each, 1 lb. One in a box.

CYLINDER HEAD AND REAR AXLE.

A sturdily built ratchet wrench 9¾ inches long with ¼ inch handle to give good grip. Fitted with 41/64 and 33/64 hex sockets to fit $\frac{7}{16}$ and $\frac{3}{8}$ inch screws.

Each

No. 631—Mossberg Ratchet Cylinder Head Screw and Rear Axle Housing Nut Wrench.....**$4.00**

CONNECTING ROD.

After removing the pan underneath the engine of a Ford, the three front connecting rods are fairly easy to adjust, but the fourth is back from the opening and (working from under the car as you must) a special wrench is absolutely necessary to adjust this "No. 4" connecting rod. The No. 623 is designed to just meet the conditions and its use will many times obviate the necessity of taking down the engine.

Each

No. 623—Mossberg Connecting Rod Wrench; mottled finish and thoroughly hardened; packed in strong fibered envelope.....**$0.62**

RATCHET CONNECTING ROD.

A new reversible ratchet wrench shaped especially to reach up and over the edge of the pan and on the nuts of the connecting rod, means that you will not have to remove wrench after you once fit it to these nuts.

Each

No. 624—Reversible Ratchet Connecting Rod Wrench..**$2.90**

HUB CAP WRENCH.

Each

No. 650—Mossberg Hub Cap Wrench; for removing Ford hub caps.....**$0.26**

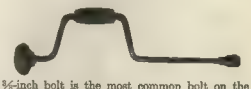
THREE-EIGHTH SOCKET.

A short sturdy "L" shaped ⅜ inch socket wrench for use on Ford cars.

Each

No. 625—⅜-Inch Single End Offset Socket Wrench; 7¼ inches long; offset 2 inches; packed in individual cartons.....**$0.48**

BRACE BOLT.



The ⅜-inch bolt is the most common bolt on the Ford car and a brace wrench is necessary to remove them rapidly. Some of the most important places where this wrench is especially used on account of its long length are on carburetor nuts, crank case nuts, cylinder valve cover nuts, fan adjusting screws, lamp bracket nut, manifold clamp stud nut, steering post bracket nut, timer spring nut, etc.

Each

No. 611—Mossberg ⅜-Inch Brace Bolt Wrench.....**$1.04**

DOUBLE-END SPARK PLUG AND CYLINDER HEAD.

The flat opening of 61/64 inches fits the Champion "X" plug used on Ford cars and is offset to get down on to the spark plug body nut. This socket measures 41/64 inches, to accurately fit cylinder head cap screws and all $\frac{7}{16}$ inch bolts.

Each

No. 635—Double-End Spark Plug and Cylinder Head Screw Wrench.....**$1.20**

RATCHET TENSION SPRING.

Especially designed for use on Ford reverse and brake pedal tension springs.

Each

No 645—Ratchet Tension Spring Wrenches; for Ford car.**$0.80**

FLY WHEEL CAP SCREW.

Designed for adjusting the cap screw on fly wheel of Ford car. Built especially strong and sturdy. Clearance of all obstructions is given.

Each

No. 637—Mossberg Fly Wheel Cap Screw Wrench.....**$1.10**

SPEED BRACE.

The sockets are drawn from cold rolled strip steel, with accurate hexagon openings, but are perfectly round outside. The addition of this extra metal across outside faces of sockets causes these sockets to be veritably indestructible. All indestructible sockets are case hardened. Top handles are steel drawn from flat stock. Construction: ½-inch steel bar, with bell-shaped steel swivel top handle; length, 19¼ inches, finish, rust proof black.

MOSSBERG.

SPEED BRACE SOCKET WRENCHES.

The purpose of No. 1700 is to offer our dealers the best possible speed brace socket wrenches, each size in the proportion in which it sells to the trade, and to offer them in a self-selling way. All Mossberg speed brace wrenches are furnished with drawn steel bell top handle which eliminates breakage, so common on the wooden type, and all the sockets are case hardened. Display board construction: Western chestnut with coach construction, individual metal tags for each wrench. Finish, natural wood with three coats of varnish. Size, 24x70 inches. Assortment consists of 75 Mossberg speed brace socket wrenches assorted in size from 29/64 to 1-17/64 inches. Each pair of hooks holds two wrenches, although the assortment is arranged so that you get quantities in each size of sockets exactly as that particular size sells. On those sizes where more than two wrenches are furnished, you have a small reserve stock.

Each

Per Set

No. 60—**Ford Tool Box Kits;** consisting of 9-inch ratchet wrench, extension socket, universal joint and one each 1/4, 3/8, 5/16, 9/32, 7/16, 1/2 and 9/16 hexagon sockets. **$4.40**

This Ford wrench is made of the same quality malleable iron and has the same high grade finish as the No 60 kit. Packed in strong fibre box, convenient size to carry in tool box.

Per Set

No. 61—**Ford Tool Box Kit;** consisting of 8½-inch socket wrench, spark plug socket, oval socket for end bearings of crank shaft and one each 7/32, 93/2, 5/16, 3/8 and 2 1/32 hexagon sockets. **$2.00**

MOSSBERG SOCKET CHEST.

This particular assortment of sockets and handles has been carefully made up from several year's record of sales and the quantity of each unit is in direct proportion to its demand. Empty kits are included in the assortment for containers of special sets made up from this stock. The chest is a beautifully finished store fixture made of selected chestnut and is 14¼ inches high, 21 inches wide, 12½ inches deep, with eight drawers.

The No. 300 Assortment consists of:

300 regular Mossberg pressed steel sockets, rust proof, assorted sizes.

21 only pressed steel spark plug socket wrenches, assorted sizes.
4 only No. 350 reverse ratchet socket handles.
4 only No. 355 ratchet handles.
4 only No. 322 double-end offset and vertical handles.
4 only No. 340 take-down T handles.
4 only No. 336 universal joints.
4 only No. 351 extension tubes.
5 only canvas tool rolls.

Each

No. 300—Mossberg Socket Chest; complete with above assortment; carefully packed one in a box; weight packed ready for shipment, 145 lbs. **$123.00**

MOSSBERG SOCKET WRENCH PARTS.

HEXAGON SOCKETS.

Mossberg socket wrenches are so generally used in automobile repair work that it is necessary for dealers to have a stock of parts to take care of requests for more parts to add to sets already purchased or for replacement of lost units and for customers desiring special sizes.

Per Socket

Mossberg Pressed Steel Hexagon Sockets—Furnished in following sizes: 5/16, 11/32, 3/8, 13/32, 7/16, 15/32, 1/2, 17/32, 9/16, 19/32, 5/8, 21/32, 11/16, 23/32, 3/4, 25/32, 13/16, 27/32, 7/8, 29/32, 15/16, 31/32, 1, 1-1/32, 1-5/32 and 1-9/32 inch. **$0.36**

SQUARE SOCKETS.

Per Socket

Mossberg Pressed Steel Square Sockets—Furnished in following sizes: 13/32, 15/32, 17/32, 19/32, 21/32, 23/32, 25/32, 29/32, 1-1/32, 1-5/32 and 1-9/32 inch. **$0.36**

MOSSBERG SOCKET WRENCH PARTS.

UNIVERSAL JOINT.

This universal joint allows the direct application of socket wrenches upon nuts or set screws in the most inaccessible places where it is necessary to literally "turn a corner", that is, the handle of socket wrench is used at an angle yet takes direct power used with long extension or 17/32 inch square socket.

Each

No. 336—Mossberg Universal Joint..... **$0.76**

RATCHET SOCKET HANDLE.

A reversible ratchet all steel socket wrench handle which will give long and satisfactory service.

Each

No. 350—Mossberg Ratchet Socket Wrench Handle; nickel plated finish..... **$3.50**
No. 355—Mossberg Ratchet Socket Wrench Handle; dead black finish..... **1.75**

EXTENSION BAR.

This long tubular extension bar, 9½ inches in length, makes it easy to reach many otherwise inaccessible places; can be used with ratchet socket handles, sockets or universal joint.

Each

No. 351—Mossberg Tubular Extension Bar..... **$0.80**

"T" SOCKET WRENCH HANDLE.

A strong compact take-down "T" handle, 10½ inches in length, made of hardened steel, mottled finish.

Each

No. 340—Mossberg Socket Wrench Handle..... **$0.80**

OFFSET SOCKET WRENCH HANDLE.

Ten inches long, made of finest steel thoroughly hardened.

Each

No. 320—Mossberg Socket Wrench Handle **$0.40**

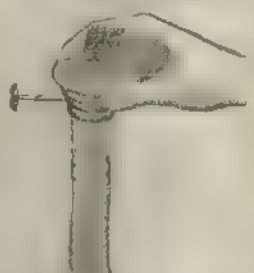
Cut Shows Label on all Norleigh Diamond Lanterns Giving Instructions how to Obtain Best Results.

THE PROPER CARE OF LANTERN WICKS

A cotton wick serves but one purpose in lantern or lamp, and that is to convey the oil from the fount up to the point of combustion.

A lamp wick or lantern wick is a loosely woven bundle or bunch of cotton fibres, of proper size to fill the wick tube of the burner. The ower end of the wick resting in the fount becomes quickly saturated, nd then by means of capi lary attraction the oil is lifted and carried up athrough the burner to the point of combustion. It is, therefore, clear that any change in the character of the fibres which constitute the wick will affect their usefulness as a means of conveying the oil by attraction.



The illustration shows one of the wick and burners taken from a teated lantern. You will observe that the upper end of the wick is charred for a distance half the length of the thumb. This charring comes as a result of being exposed directly to the flame. It shows that the business end of the wick for a distance of an inch or more is badly charred. That means that the cellular character of the wick fibres had been *destroyed by fire.* The black portions are simply the ruins of fibres, the mineral-like residue or ashes from which all absorbent properties have been removed. This charred end of the wick is [illegible] because it cannot properly perform the functions of a wick.

Every experienced lantern user is very careful to avoid bringing about such conditions as described above, well knowing that it is useless to expect a steady, dependable light with so imperfect a wick. Where these conditions exist, it is necessary to trim all blackened portion of the wick away, and begin again exposing only the tip end of the wick to the flame. A wick properly trimmed once every few days will give absolute and entire satisfaction, always provided that the perforated globe rest is kept reasonably clean and the fount at least moderatly filled with kerosene oil of the ordinary grade which the market affords.

We do not apologize for our lantern construction. It is the best in existence. We don't ask any special treatment for our lanterns. They don't need it, but we do insist upon ordinary cleanliness and a glimmer of common sense in the use of our lanterns or any other of our specialties

Clear Crystal Lead Glass Globes, Specially Made

"ORIGINATED BY US"

SHORT GLOBE
BELL SHAPED FOUNT

Only Three Operations to Light It:
A.—Raise the Globe.
B.—Light the Wick.
C.—Lower the Globe to Position.

Can be Lighted Quickly—which is an Advantage—in Lighting in the Wind Out of Doors.

Compare the Three above Operations with the Five which are Necessary to Light Other Short Globe Lanterns of this Type. The Five Operations are as Follows:

A.—Lift Sleeve on Top of Globe.
B.—Tip Back the Globe.
C.—Light the Wick.
D.—Tip Globe Back into Position.
E.—Lower the Sleeve to the Top of Globe.

The Hinged Globe in Other Short Globe Lanterns is an Old Method of Lighting Wick Used Many Years Ago.

The Fount of this Lantern is Larger than any Other of this Type. Ours will Burn Thirty-five Hours with One Filling.

Our Exclusive Style Reinforced Bell Shape Fount.

Compare the Shape of the Dome with that of any Other Lantern of this Type, and with its Flange of Shield Shape Instead of Being Straight Out, Makes the Lantern More Wind Proof than any Other Make; and not only that, but it Corresponds with the Canopy. Therefore, is Symmetrical.

The Flange of Dome Possesses Greater Stiffness than that of any other Lantern, Because it is Reinforced by a Separate Plate Underneath. It Never Gets Knocked Out of Shape or Damaged as is so Frequently the Case in Other Makes.

"ORIGINATED BY US"

SHORT GLOBE
BELL SHAPED FOUNT

The Brass Filler is of Large Size and has a Flush Top, not a Dished or Concave One. **Two Turns Fastens it.**

Lock Burner Made of Steel, Tinned. The Burner is Locked in Place and Cannot get Out of its Locked Position.

The Wire Lift at the Top of Globe in Other Lanterns Make it Necessary to Slit the Sleeve above the Globe through which to Operate the Crank Wire. The Slits or Openings in this Sleeve Weaken the Wind Resisting Power, and Thus, Instead of Being Wind Proof, the Openings Allow Much of these Openings are Carried Against the Wind. For that Reason, if for no Other, We have Our Lift for the Globe Arranged at the Bottom, where it Should be.

Wooden Bail Handles on all Bell Shape Fount Styles.

By Setting One of Our Norleigh Diamond Short Globe Lanterns by the Side of the Best One of Other Makes, you will, in Our Opinion, Decide that it Pays Best to Buy Our Lantern comparatively. We not Only Give the Best Value for the money, but the Lantern itself Shows it to be so.

When Selling Our Norleigh Diamond Short Globe Lantern, you Would Not Only be Furnishing Your Customers with the Best Lantern Obtainable, but what is of Greater Importance, you would be Securing the Best Profit.

Norleigh Diamond **Short Globe** Lanterns are **Unexcelled** in Brightness and Purity of Light. Light More Quickly. They Trim Easily. Fill More Easily. The Globe Being Short, is Cleaned Easily, there Being Less Glass Surface to Become Heated, Less Likelihood of Breakage of Globes.

STANLEY RULE & LEVEL CO.'S PLANES

Bench planes are divided into four classes: Smooth, Jack, Fore and Jointer Smooth for finishing or smoothing off flat surfaces. Where the uneven spots are of slight area its short length will locate these and leave a smooth surface when finished Jack, to true up the edges of a board in the rough and prepare it for the Fore or Jointer. Fore is simply a short jointer and, being lighter, is preferred by some workmen to a longer plane Jointer, a finishing plane for large surfaces and invariably used to true up edges of boards so that they can be closely fitted or jounted together.

BAILEY'S IRON BENCH

Cast iron japanned frames, varnished rosewood handles and knobs, polished caps, tempered and polished English steel cutters, screw and lever adjustments.

Each	$2 55	2.65	2.75	3.00

One in a Paper

STANLEY'S WOOD BENCH

They have a simple lever adjustment and are well made.

The cutters are of the double cutter type, of high grade steel, ground and honed ready for use. They are adjustable endwise by means of a lever and are held in place by a lever thumb screw instead of a cam. The bottoms, handles and knobs are made of beech and the entire plane is well finished.

Smooth

Nos.	122	135
Length, inches	8	10
Cutter, in.	1¾	2⅛
Each	$1.40	1.85

NOTE—No. 135 has handle. No. 122 does not have handle

One in a Paper

STANLEY'S CARRIAGE MAKERS' RABBET PLANES

Especially adapted for the heavy framing required in mining work, for carriage or wagon building. Rosewood handles and knobs.

Smooth Bottom

No. 10½—Length 9 in., cutter 2⅛ in.
Each $3 00

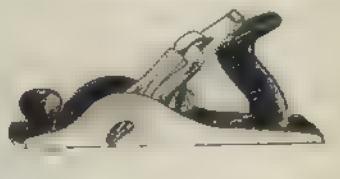
One in a Box

STANLEY'S CARRIAGE MAKERS' SAFETY PLANES

Corrugated Bottom

No. 10½C—Length 9 in., cutter 2⅛ in.
Each $3 00

One in a Box



Plain Bottom

No. 10—Length 13 in., cutter 2⅜ in.
Each $3.50

One in a Box

Plain Bottom

Handle and knob are adjustable and can be tilted in either direction. Fitted with spurs on both sides, so that it will rabbet across grain.

No. 10¼—Length 13 in., cutter 2⅛ in
Each $4 00

One in a Box

BAILEY'S BLOCK PLANES

Block planes are used with one hand for planing across the grain particularly the ends of boards or called "blocking in." The cutter rests at an angle of 20 degrees instead of 45 degrees as in bench planes, and the cutter bevel is on the upper side instead of the lower

Adjustable

Nos.	6½	16
Finish	Japanned	Nickeled
Length, inches	6	6
Cutter, in.	1⅝	1⅝
Each	$1.35	1.50

Six in a Box

STANLEY'S RABBET AND BLOCK

A detachable side will easily change it from a block to a rabbet plane and vice versa.

No. 140—Length 7 in., cutter 1⅝ in., adjustable sidewise and set on a skew, japanned trimmings ..... Each $1.80

One in a Box

BULL NOSE RABBET

Useful for working close up in corners or other difficult places. The mouth is adjustable for different widths.

No. 75—Length 4 in., cutter 1 in., japanned trimmings ..... Each $0.50

One in a Box

SIDE RABBET

No. 98—Right Hand No. 99—Left Hand

Very convenient for side rabbeting in trimming dados, mouldings or grooves of all sorts. A reversible nose piece allows to work up in close corners

No. 98—Right hand, 4 in. long, ⅛ in. cutter ..... Each $1.30

No. 99—Left hand, 4 in. long, ⅛ in. cutter ..... Each $1.30

One in a Box

HANDLED RABBET

Will lie perfectly flat on either side and can be used equally as well with either right or left hand while planing into corners or up against perpendicular surfaces; fitted with a detachable depth gauge, without spur, japanned.

Nos.	180	181	182
Length, inches	8	8	8
Cutter, inches	1½	1¼	1
Each	$1.50	1.50	1.50

One in a Box

HANDLED RABBET

Same as No. 180 series, only fitted with a spur which permits working across the grain, japanned.

Nos.	190	191	192
Length, inches	8	8	8
Cutter, inches	1½	1¼	1
Each	$2.20	2.20	2.20

One in a Box

DUPLEX, FILLETSTER AND RABBET

Has two seats for the cutter, one for regular work and the other for use as a bull nose. Has spur and removable depth gauge. The adjustable fence can be used on either side and slides under the bottom, regulating width of cut. Remove arms and fence and a rabbet plane is obtained.

No. 78—Length 8⅛ in., cutter 1⅝ in., japanned ..... Each $2.10

One in a Box

RABBET AND FILLETSTER

The sides and bottom being square with each other, the plane will lie perfectly flat on either side. The adjustable fence slides under the bottom regulating width of cut. Spur on each side for working across the grain, also an adjustable depth gauge. These can be attached to either side for right or left hand work. Front part can be detached, making a bull nose plane for working close up into corners or other difficult places.

No. 278—Length 6¾ in., cutter 1 in., japanned ..... Each $2.40

One in a Box

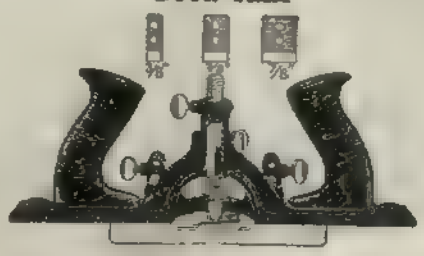
SKEW CUTTER, FILLETSTER AND [illegible]

Extra wide skew cutter, adjustable spurs fitted to each side, fence and depth gauge can be attached to either side for right or left hand work. The adjustable fence slides under the bottom regulating width of cut. Remove arms and fence and a skew rabbet plane is obtained.

No. 289—Length 8⅛ in., cutter 1¾ in., japanned ..... Each $2.40

One in a Box

DOOR TRIM



Will make mortises for butts, face and strike plates, escutcheons, etc., up to a depth of 5/16 and a width of 3 in. Cutter can be set to work from either end or across. A fence regulates the position of cut and insures the sides being parallel, can also be made into a router plane.

No. 171—Length 9 in., japanned, with three cutters, ⅜, ⅝ and ⅞ in., Each $3.60

One in a Box

STANLEY RULE & LEVEL CO.'S PLANES

EDGE TRIMMING

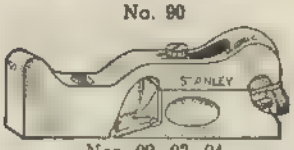
Designed especially for trimming or smoothing the ends of boards such as siding, etc., for a square or close fit. Has a right angle rest or guide from the cutter edge and the cutter works on a skew, giving an easy shaving cut. In the guide are two screw holes to which beveled wood blocks can be attached enabling the user to make a slanting cut.

No 95—Length 6 in., cutter ⅞ in., japanned ..... Each $1.50

One in a Box

CABINET MAKERS' RABBET

No. 90



Nos. 92, 93, 94

The sides and bottom are square with each other, the planes will lie perfectly flat on either side, and can be worked either right or left hand. Adjustable throats; the width of the throat opening can be widened or narrowed. They are also fitted with the side groove or "Hand-y" grip feature. The cutters are adjustable endwise, nickel plated.

Nos.	90	92	93	94
Length, inches	4	5½	6½	7½
Cutter, inches	1	¾	1	1¾
Each	$2.85	2.85	3.25	3.75

One in a Box

SCRUB PLANE

For quickly planing down a rough board that is too wide to conveniently rip with a hand saw, the extra heavy cutter having a rounding edge instead of square.

No. 40—Length 9½ in., cutter 1⅛ in., beech handle and knob.....Each $1.40

No. 40½—Length 10½ in., cutter 1½ in., beech handle and knob...Each 2.00

One in a Box

STANLEY'S ADJUSTABLE CIRCULAR

Flexible steel face which can be accurately adjusted by graduated scale, for planing the inside and outside of circles. The face is fastened at the center and adjusted at the ends by means of screws.

No. 113—Length 10 in., cutter 1¾ in., japanned .....Each $3.90

One in a Box

VICTOR ADJUSTABLE CIRCULAR

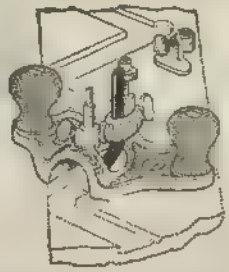
Flexible steel face which can be accurately adjusted for planing the insides and outside of circles. The face is fastened at each end and adjusted by screw at the center.

No. 20½—Length 10 in., cutter 1¾ in., japanned .....Each $4.40

No. 20—Length 10 in., cutter 1¾ in., nickel plated .....Each 5.00

One in a Box

ROUTER PLANES



For surfacing the bottom of grooves or other depressions parallel with the general surface of the work.

No. 71—Length 7⅛ in. Open throat, with one ¼ in. and one ⅛ in. cutter, nickel plated.....Each $2.70

One in a Box

No. 71½—Length 7⅛ in. Closed throat, with one ¼ in. and one ⅛ in. cutter, nickel plated.....Each $2.10

One in a Box

DADO PLANES

Have skew cutters, an adjustable depth gauge, and two adjustable spurs, one on each side of the plane. Length 8 inches, japanned.

No. 39—

Cutter, in.	¼	⅜	½	⅝	¾	⅞	1
Each	$2.10	2.10	2.10	2.10	2.10	2.10	2.10

One in a Box

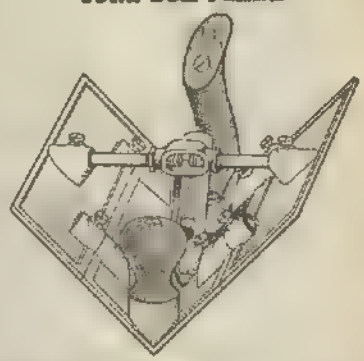
BELT MAKERS' PLANE

Designed for chamfering down the ends or laps of a belt before fastening them together. Fitted with an adjustable throat, by means of which a wide or narrow opening may be given to the mouth, or slot, for the cutter. Cutter is adjustable endwise by means of the screw shown at the back. Hardwood handle, japanned.

No. 11—Length 5¾ inches, cutter 2⅜ inches .....Each $2.75

One in a Box

CORE BOX PLANE



Adapted for large core boxes. Furnished with one pair of extra sides, or, as they are called, additional sections. With one pair of sections it will work semi-circles up to 5 inches in diameter. Additional sections can be supplied, each extra pair adding 2½ in. to the diameter of the semi-circle that can be worked, up to 10 in. in diameter, the practical limits of the plane. Handle and knob of beech. Full nickel plated

No. 57—Length 10 inches, cutter ⅞ inches .....Each $5.35

One in a Box

STANLEY HAND BEADERS

Universal

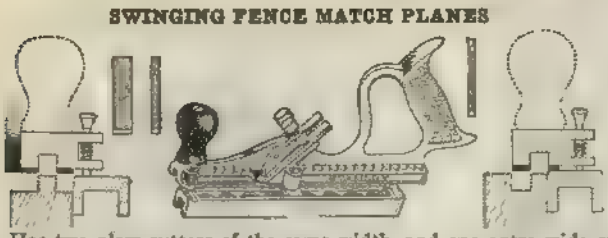
For beading, reeding or fluting straight or irregular surfaces and for light routering. With each beader are furnished a square gauge for straight work and an oval gauge for curved work. There are also furnished eight cutters sharpened at both ends and embracing the following assortment: 6 single beads ⅛, 5/16, ¼, 7/16, ⅜ and ½ in.; 2 fluting tools 5/16 and ½ in.; 4 reeding tools (2 beads 5/16 in., 3 beads ¼ in., and three beads ⅛ in. and 4 beads ⅛ in.), 2 routers ⅛, ¼ in., and ⅜ in. blank, which latter cutter the owner can file up as he desires. Curved handles. Made entirely of metal.

No. 66—11½ in. long, 8 cutters, nickel plated .....Per dozen $18.00

One in a Box

STANLEY RULE & LEVEL CO.'S PLANES

SWINGING FENCE MATCH PLANES

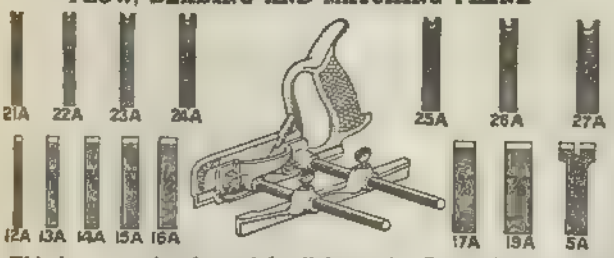


Has two plow cutters of the same width, and one extra wide cutter. The fence in one setting exposes two cutters for cutting the tongue, and when reversed, leaves only one exposed for cutting the groove. On thicker boards the plane works on center, the extra wide cutter is substituted for groove cutter when cutting tongue. Nickel plated, rosewood knobs.

No. 48—10½ in. long, cuts 5/16 in. groove, on boards ¾ in. to 1¼ in. centers, on ⅞ in.....Each $3.45

No. 49—10½ in. long, cuts 3/16 in. groove, on boards ⅛ in. to ⅝ in. centers on ½ in.....Each 3.45

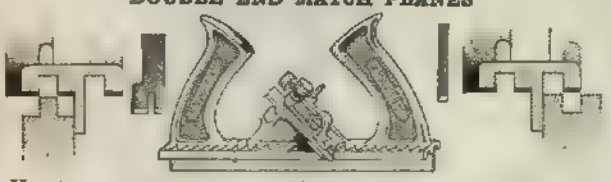
PLOW, BEADING AND MATCHING PLANE



This is a very handy tool for light work. It consists of a main stock, carrying a spur and a depth gauge, and forming a support for one side of the cutter; a sliding section, carrying a spur and forming a support for the other side of the cutter, and a fence with a 5-in. adjustment. The handle is metal, being a part of the main stock. The cutters comprise 7 plow and dado bits, ¼, 5/16, ⅜, 7/16, ½, ⅝ and ¾-in.; 7 beading tools, ⅛, 3/16, ¼, 5/16, ⅜, 7/16 and ½-in.; and a ¼-in. tonguing tool.

No. 50—9¼ in. long, nickel plated, 15 cutters.....Each $6.50

DOUBLE END MATCH PLANES



Has two separate cutters, a plow, and a tongue tool, both governed by one permanent fence. The tongue tool has one edge wider than the other, which overhangs one side when tonguing on center. Both tongue and groove are cut by working the tool in the same direction, by merely reversing it end for end. The plane is nickel plated and has iron handles cast with the body.

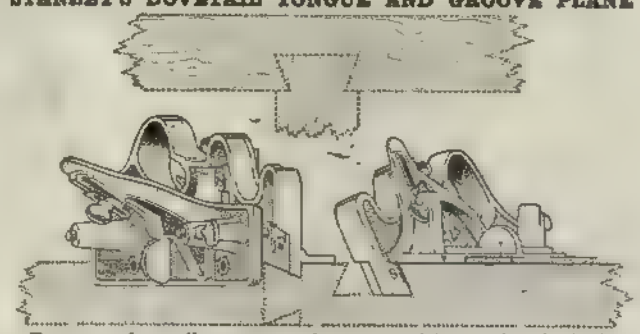
No. 148—9 in. long, cuts ¼ in. groove, on boards ¾ in. to 1 in. centers on ⅞ in.....Each $2.80

PLOW, DADO, FILLETSTER AND MATCHING PLANE

Skew cutters are the feature of this plane. It consists of a main stock carrying a spur, a depth gauge and a slitting cutter, a sliding section carrying a spur and forming an extra sole for the plane, and a fence (rosewood face) which can be set for either plow or filletster work. It has a rosewood handle and knob. The cutters comprise 8 plow and dado bits, 3/16, ¼, 5/16, ⅜, ½, ⅝, ⅞ and 1¼ in.; a 1½ in. filletster cutter; a ¼ in tonguing tool, and a slitting cutter.

No. 45—10½ in. long, nickel plated, 11 cutters.....Each $7.20

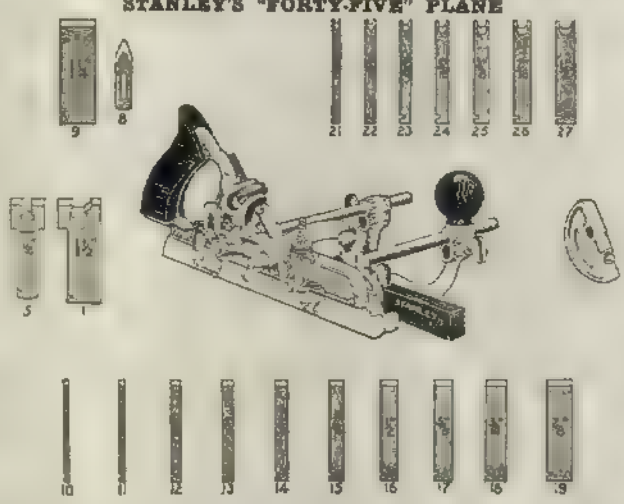
STANLEY'S DOVETAIL TONGUE AND GROOVE PLANE



Forms a dovetail tongue and groove with one hand. Will cut any size grooves and tongues to fit with sides at flare of 20 degrees, where the width of the neck is more than one-quarter of an inch and the depth of groove not more than three-quarters of an inch. The tongue and groove are cut separately, and can be made with parallel or tapering sides.

No. 444—9 in. long, nickel plated.....Each $8.75

STANLEY'S "FORTY-FIVE" PLANE



Seven tools in one in compact and practical form: 1. Beading and center beading plane. 2. Plow. 3. Dado. 4. Rabbet and filletster 5. Match plane. 6. Sash plane. 7. Slitting plane. The plane has two principal parts, a main stock and a sliding section. The main stock carries the handle, cutter adjustment, a slitting tool, depth gauge, and forms a bearing for one edge of the cutter. The sliding section slides on two arm secured in the stock and has a bearing for the other edge, allowing cutters of different widths to be used. A fence also slides on these arms for use when working as a plow, beader or filletster, to gauge the distance from the cutter to the edge of the board, and to keep the cutter at right angles to same. When used as a filletster, the fence slides under the bottom of the plane and determines the width of cutter exposed to the work.

The plane is fitted with spurs for use across the grain, etc., and can be used either right or left hand. With each plane are furnished twenty-one cutters, all of which are shown in the cut. The cutters, together with the plane, are packed in a neat steel box. All metal parts are nickel plated. The handle, knob and fence are made of rosewood. For beading at a distance from the edge of a board, attach cam rest (see cut at right of plane) to the front arm between the sliding section and fence to prevent the fence sagging.

No. 45—Nickel plated, with 21 cutters.....Each $11.50

The following cutters are furnished with each plane. The price is given in case duplicates should be required.

No.	Size	Style	Each
1—	1½ in.	sash tool	$0.50
5—	¼ in.	match tool	.50

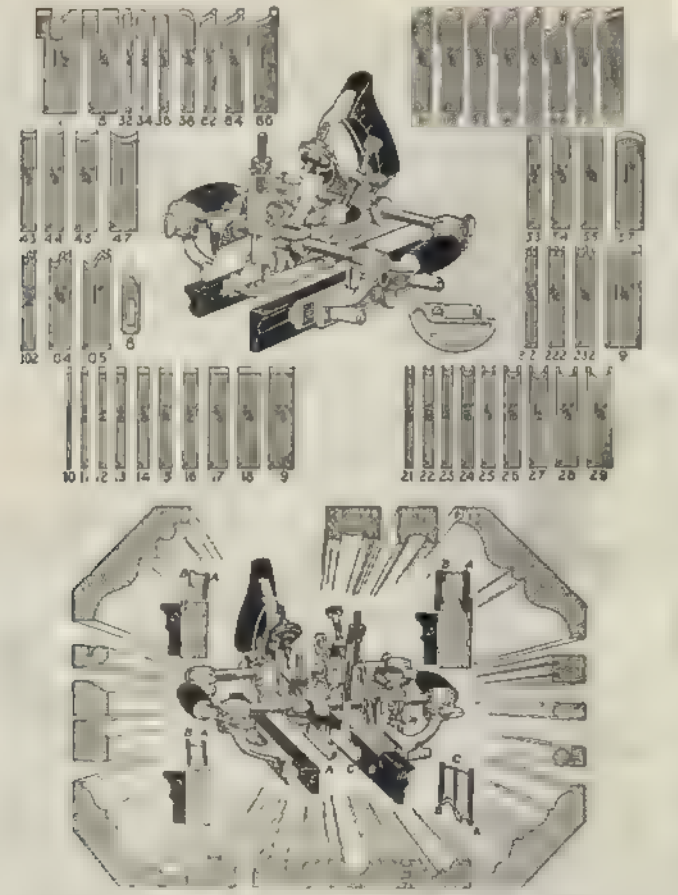
27—	½ in.	beading tool	.25

STANLEY RULE & LEVEL CO'S PLANES

STANLEY'S "FIFTY-FIVE" PLANE



This plane has: A main stock, "A," which carries the cutter adjustment, a handle, a depth gauge, a slitting gauge, and has a steel bottom forming a bearing for one edge of the cutter. A sliding section, "B," with a steel bottom gives bearing for the other edge of the cutter and slides on arms secured in the main stock. This bottom can be raised or lowered so that, in addition to allowing the use of cutters of different widths, cutters can be used having one edge higher or lower than the edge supported in the main stock. An extra support or stop is necessary for cutters which first enter the wood at a point between the outside edges, and is a benefit for such cutters which, if the plane were accidentally tilted, would tend to gouge the work. The auxiliary center bottom, "C," which can be adjusted for width or depth fulfills this requirement. Fence, "D," has a lateral adjustment, by means of a screw, for extra fine work. The fences can be used on either side of the plane, and the rosewood guides can be tilted to any desired angle up to forty-five degrees, by loosening the screws on the face. Fence, "E," can be reversed for center beading wide boards.

The plane is fitted with spurs for working across the grain, and a special cam rest, to be located on the front arm when working at a distance from the edge of the board, to keep the fence from sagging, or on the rear arm on certain work, to prevent the possibility of the plane rocking. All parts are interchangeable.

The four small cuts in the corners show how the bottom should be set for different forms of cutters, and the great importance of having the fences adjusted so that the cutters will not run.

This tool, in addition to being a beading and center beading plane, a plow, dado, rabbet, fillister, and match plane, a sash plane and a slitting plane, is also a superior moulding plane, and will accommodate cutters of almost any shape and size. In fact, it is **"A planing mill within itself."** The regular equipment sent with the plane comprises fifty two cutters, all of which are shown in the cut. These cutters, together with the plane and all its attachments, are packed in a neat steel box. A further line of forty-one cutters can be furnished from factory. Cutters of practically any form can be used in the plane, which the owner can make from blanks or order from sketch. All metal parts of the plane are nickel plated. The handle and fences are made of selected rosewood, and every part is well finished.

No. 55—Nickel plated, with 52 cutters.....Each $22.50

The following cutters are furnished with each plane. The price is given in case duplicates should be required.

NOTE—In ordering parts for Planes, specify the number of Part desired together with the number of plane.

STANLEY BENCH PLANE IRONS

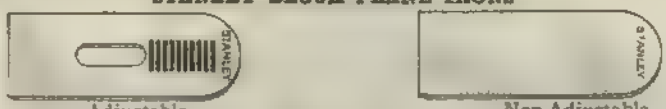
Single Double

For "Bed Rock" and "Bailey" iron and wood planes. The proper bevel for grinding the cutter is at an angle of about twenty-five degrees. This angle should be observed when re-grinding or re-honing the cutter. The same plane iron fits all the planes opposite the sizes given below, but the cap irons in the iron and wood planes are not interchangeable. In ordering, always give number of plane for which iron is wanted.

		Single	Double
1⅝-in.	For planes Nos. 2, 2C, 602, 602C	Each $0.21	$0.35
1¾-in.	For planes Nos. 3, 3C, 20, 20½, 21, 22, 23, 25, 113, 603, 603C	Each .23	.38
2 -in.	For planes Nos. 4, 4C, 5, 5C, 9, 24, 26, 35, 604, 604C, 605, 605C	Each .25	.42
2⅛-in.	For plane No. 27	Each .27	.45
2¼-in.	For planes Nos. 5½, 5½C, 27½ 605½ 605½C.	Each .28	.47
2⅜-in.	For planes Nos. 4½, 4½C, 6, 6C, 7, 7C, 11, 28, 29, 30, 31, 36, 604½, 604½C, 606, 606C, 607, 607C	Each .29	.48
2⅝-in.	For planes Nos. 8, 8C, 32, 33, 34, 37, 608, 608C.	Each .32	.50

Half Dozen in a Box

STANLEY BLOCK PLANE IRONS



Adjustable Non-Adjustable

In ordering, always give number of plane for which iron is wanted. When more than one number is given on a line, all numbers take the same iron.

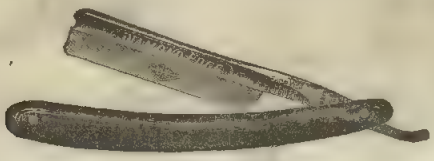
FULLY GUARANTEED.

End View showing Concaved Shape Cutting Edge and Extra Stiff Reinforced Back



*DIAMOND EDGE

Cut shows Non-Rusting Metal Reinforcing Washers on each side of Tang next to Handle. Holds the Blade tone so that in closing the edge of Blade will never "Cross Over" and strike side of Handle

RAZOR

NO. DE17/300

This consists of the best points of the wedge shape of the old English razor with its stiff, rigid edge and the light weight and attractiveness of the more modern concaved razor.

It is designed to meet the requirements of all who have difficulty in shaving with comfort owing to tender skin and a wiry beard.

This Razor is giving universal satisfaction to the user who has that tough beard and tender skin. It is made with a stiff edge, much desired in the old English razor, yet, has the light weight of the new concave razor. The edge is so constructed that it will not quiver or rattle under the most trying conditions, and has stood the test of of the most exacting.

Warrant

This razor is made with that exactness which can only be attained by workmen thoroughly trained in their Art. Extreme care is given to the forging, tempering and grinding of this razor, which is followed by the most rigid inspection. We warrant them to give perfect satisfaction if given reasonable care. There is absolutely no excuse for a soiled or rusty razor.

A dealer should not be asked to exchange such a razor.

Blade ⅝ inch Only, Crocus Polished Back and Grooves, the Concaved Half of Blade Glazed with etched *DIAMOND EDGE Trade Mark; Diamond Edge Etched in Gold in Groove; Plain, Smooth Tang; Black Rubber Handle.

SPECIAL OFFER

In order to introduce this New Razor we are offering with every Dozen Razors, One Dozen of our Norleigh Diamond Shaving Stick Soap. The Soap is given absolutely free with every Dozen Razors purchased. This Soap is receiving justly merited recognition as the Best Article on the Market for the purpose. Further Description below.

*NORLEIGH DIAMOND
SHAVING STICK—(DEMULCENT)

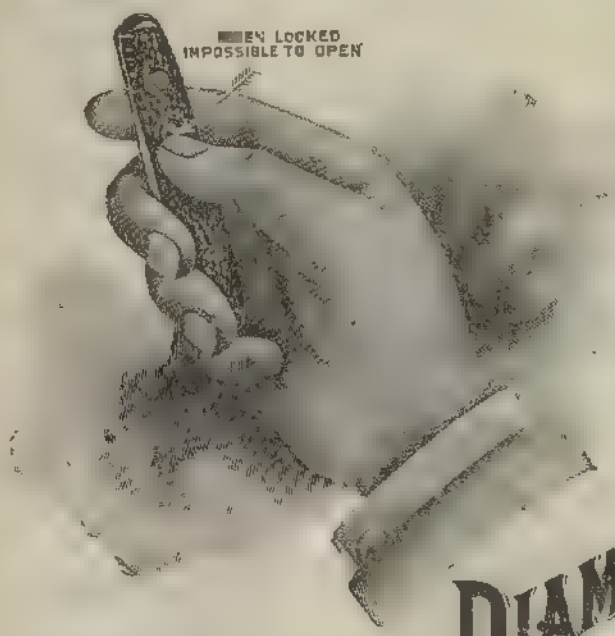
*DIAMOND EDGE "SAFETY PRESS BUTTON" KNIFES

(U. S. Patents 812,601 and 845,130)



The *DIAMOND EDGE* "Safety Press Button" Knife is a convenient Automatic Fly-Open Pocket Knife, which can be Opened and Closed with One Hand; no Danger of Breaking Finger Nails, and can be as easily Operated with Gloves on the Hands as without; the trouble Experienced in Opening an Ordinary Pocket Knife when Fingers are Benumbed with Cold is entirely overcome in the Safety Press Button. The most Valuable Features of this Knife, however, lie in the fact that the **Blades can be locked either in an Open or Closed Position**, avoiding any Possibility of Injuries, caused by Accidental Opening while in the Pocket or Closing while being in use. **When the Safety is Pushed into Position the Blades are Positively Secure and Safe Against Opening in the Pocket. This Knife is the only one on the Market Possessing this Very Important Feature.**

The Life of a "Safety Press Button Knife" is Indefinitely Long and the Mechanism will be Found in the same Good Order when the Blades are Entirely Worn out as when the Knife was Purchased. This is one of the Chief Points of Advantage as Compared with an Ordinary Pocket Knife, as on the *DIAMOND EDGE* "Safety Press Button" there is no Friction Whatever on the Tangs of the Blades. On the Ordinary type of Knife the Blade Springs Wear Away the Tangs, Causing the Points to Rise Above the Handle. This can Never Occur in the "Safety Press Button." The Points will Positively Not Rise Above the Handle Unless the Shape of the Blades should be Changed. This Feature we can Solely Claim for Our Knife, Owing to the Construction of the Locking Mechanism.

This Pattern is the result of about Fifteen Years Thought on the Subject of Automatic Fly-Open Knives, and we have Finally Produced an Article Free from all Undesirable elements so Commonly Found in this Class of Knives. The "Safety Press Button" is a Distinct Departure from the original Mechanism of the Old Style Press Button and a General Improvement in Appearance and Effectiveness.

Second to Appearance and Effectiveness in the Design of the "Safety Press Button," we Considered the Strength and Durability of the Various Parts and Mechanism. These Points are of Vital Importance in a Knife of this Character and ones which could Never be Claimed for the Old Style Press Button.

The Design throughout is Superior and more Symmetrical than the Old Style; the Blades are Fuller and the Handles are more Shapely from every Point Considered.

The Workmanship is of the Highest Class used in the Production of any Pocket Knives in the World. They are Made on the Interchangeable Plan; that is, each and every part of any Knife is an exact duplicate of a similar part of any other Knife of the Same Size or Style.

Blades Made of **Highest Grade English Steel**, Properly Hardened and Tempered to the most Desirable Degree of Hardness so that they will Hold their Edges and will not Break off, Chip out or become a Feather Edge. All Materials are of Best Quality and the Most Suitable which can be Procured on the Market.

*DIAMOND EDGE "SAFETY PRESS BUTTON" POCKET KNIVES

One dozen in a box.

Universal

Silver Overlaid Table Service

UNIVERSAL SILVER OVERLAID TABLE SERVICE is made by depositing upon a solid white nickel silver base a heavy reinforced plate of pure silver of sufficient thickness to withstand the constant wear of many years.

Each piece is unexcelled in workmanship, uniformly correct in proportion and design and will give during its long period of service a distinction to the table hitherto unattained except by the best products of Sterling Silver.

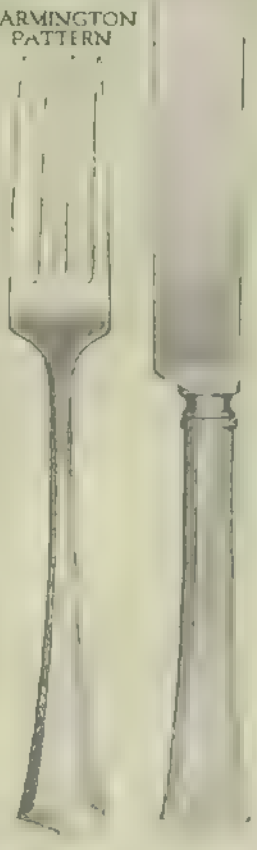
Only Resistain steel or solid Silvadium blades which will not stain, rust or turn black on the edges are used on all Hollow Handle Cutlery pieces—an exclusive "Universal" feature.

SAYBROOK PATTERN

FARMINGTON PATTERN

FARMINGTON the beautiful New England town from which this pattern takes its name, is one of the oldest settlements in Connecticut and is renowned for its fine examples of early Colonial architecture.

The chaste simplicity of the lines of the spire and belfry of the old church, its most admired structure, is suggested in the Farmington pattern.



FARMINGTON PATTERN

SAYBROOK PATTERN

Where "Old Saybrook" still stands at the mouth of the Connecticut the first fort of the colony was located. On the broad village street stands the old historic homestead known as the "House of Romance", the favorite visiting place of Washington Irving and Fitz-Greene Halleck and from where the gallant Commodore Isaac Hull won his bride.

Truly Colonial in design and suggesting romantic traditions, the Saybrook pattern will be particularly valued as a wedding gift that may be handed to succeeding generations as a treasured family heirloom.

House of Romance at Old Saybrook

UNIVERSAL SILVER OVERLAID TABLE SERVICE costs but little more, is worth considerably more and should not be confused with ordinary silver plated ware

The brand "Universal" on silver table ware is a mark of supreme quality the result of an experience of over fifty years in the artistic working and plating of metals It is our absolute guarantee on each piece that it will give satisfactory service in any household

Landers, Frary & Clark, New Britain, Conn.

Master cutlers for over half a century

FOR 25 YEARS RUGBY BICYCLES HAVE BEEN THE QUALITY LINE OF AMERICA

*RUGBY BICYCLES

BIMOCYCLE MODEL 1917

"ORIGINATED BY US"

THE QUALITY ALWAYS THE SAME NOTWITHSTANDING THE PRICE

This is the Best Looking Bicycle ever Produced, that has the Appearance of a Real Motorcycle. Special Attention is called to the Truss Frame Construction, which is a Big Feature that is Patented. The Illustration shows the Regular 20, 22 and 24 inch Frame to 18, 20 and 24 inches respectively, but we will furnish these sizes 21, 23 and 24 instead of 18, 20 and 22 inches, which are their actual measurements.

We call Special Attention to the Possibilities of the 20 inch Frame, which can be Ridden by the Boy who is just at the age when he wants the most elaborate Bicycle. In the past this Boy has been Forced to Ride an 18 inch Juvenile with 26 inch Wheels. He can now ride the **20 inch Rugby Bimocycle with Full Size (28 inch) Wheels and Feel that he has a "Grown-up" Mount.**

Good Service "Oil Proof" Interlocking Red Diamond Tread Tires are used on this Bicycle. A Very High Grade Tire.

The Double Diamond Cups Grip the Slippery Places, Preventing Skidding and Protect the Rider Against Accidents.

SPECIFICATIONS

Bearings—Balls: 9/32 inch in Head; 9/16 inch in Hanger; ¼ inch in Rear Hub; 9/16 inch in Front Hub.

Chain—Roller or Block, 5/16 inch; 1 inch Pitch.

Connections—Double Plate Arch Fork Crown, Forged Seat Post; Cluster Bolt and Nut Fastening.

Crank Hanger—Genuine Rugby, One Piece; 7 inch Diamond Cranks; Highly Nickeled.

Enamel—Four Coats, Hand Polished; Special Ivory Gray with Maroon Hair Line Stripes.

Frame—18, 20 and 22 inch; 1 inch, 18-Gauge English High Carbon Seamless Tubing.

Handle Bar—No. MB2 Motorcycle Style; No. 20B Grips.

Hubs—Turned from Solid Stock; Tool Steel Cones and Cups.

Pedals—Square Checkered Rubbers.

Rims—One Piece, Rock Elm; Enameled to Match; Aluminum Finished with Blue and Red Hair Line Stripes.

Saddle—No. 25R Rugby Motor Bike Style.

Spokes—14-16 Gauge.

Sprockets—26 Tooth Front, 9 Tooth Rear; 5/16 in.

Tool Bag—No. 12; Contains Wrench and Pump.

Pump—No. 1H Hand.

Wheels—28 inch.

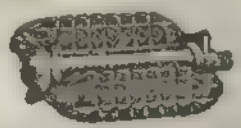
Wheel Base—44 inches.

Mud Guards—Drop Side Motorcycle Style Front and Rear; Enameled to Match Frame; Mud Flap on Front Guard.

Tires—No. 70 Good Service.

Motorcycle Stand—Drop Forged Channel; Steel; Can be Raised or Lowered with Foot; Locks Automatically. Also Can be Locked with Padlock when Stationary.

Cut Shows No. 20B Motor Style Rubber Grip, 7 inches Long. These Grips Give Absolute Control Over the Steering at all Times. No Danger of Slipping Out of the Hands on Uneven Roads.



Pedals are Extra Large and are Equipped with Square Checkered Rubbers, Giving a Firm Foothold on Rough Roads. Ball Bearing Throughout. Made of Steel, Nickel Plated.

No. 8 Tool Bag, with Wrench and Pump.

BIMOCYCLE MODEL 1917

"ORIGINATED BY US"

THE QUALITY ALWAYS THE SAME NOTWITHSTANDING THE PRICE

This is the Best Looking Bicycle ever Produced, that has the appearance of a real Motorcycle. Special Attention is called to the Truss Frame Construction, which has a drop of two inches at the rear end. This drop reduces the Regular 20, 22 and 24 inch Frame to 18, 20 and 22 inches, Respectively, but we will call the Frames 20, 22 and 24 instead of 18, 20 and 22 inches, which are their actual measurements.

We call Special Attention to the Possibilities of the 20 inch Frame, which can be Ridden by the Boy who is just at the age when he wants the most Elaborate Bicycle. In the past this Boy has been Forced to Ride an 18 inch Juvenile with 28 inch Wheels. He can now ride the 20-inch **Rugby Bimocycle** with Full Size (28 inch) Wheels and Feel that he has a "Grown-up" Mount.

LITTLE GIANT.

Sectional view of die and collet.

Die and Collet.—The collet, or holder, is made of two pieces called a cap and a guide. The cap has a bevel slot into which the bevel of the die is fitted. The guide is screwed into the cap, which throws the die into the bevel of the collet, and into line. To adjust, simply turn the screws at the ends of the dies in or out, as the adjustment requires.

The important feature of this adjustable die is its solidity; the impossibility of stripping of threads; its perfect adjustment; its simplicity, durability and strength; doing away with all taper pointed and cup headed screws common to many makes of dies.

FULL STOCKED.

¼ to ¾ inch—7 sizes.

Each.

Assortment No. 65—Cutting 7 sizes: ¼, ⅜, ½, ⅝, ¾, ⅞ and 1 inch, complete in case, with adjustable tap wrench $34.50

Weight ..... 26 pounds

CHICAGO.

No. 150.

No. 151.

For outdoor work, light repairing and farmers' use.

Each.

No. 150—The operating principle is a most positive and simple device. The ratchet never slips and a strong blast is obtained with slow lever motion. Nothing about it to get out of order; hearth, 18 inches; height, 33 inches; weight, 65 pounds.....$10.00

No. 151—Same as No. 150, but with half open hood; weight, 70 pounds..... 12.00

CHALLENGE.

From factory, Chicago delivery.

For bicycle repair shops, toolmakers, tin shops, plumbers and all light repair shops.

Each

*No. 5—Has capacity to heat 2-inch iron; adapted to small hardware work; fan, 9½ inches; hearth, 22 inches; height, 33 inches; weight, 125 lbs.....$16.50

*No. 5¼—Same as No. 5, with full enclosed hood..... 20.20

WESTERN CHIEF.

For bridge builders, railroads, quarries, etc.; especially adapted for outdoor work, where hood is not needed. Capacity to heat 3½-inch iron.

Each.

*No. 102—Best and highest grade throughout; Royal blower, crank turns forward or backward; duck nest fire pot; blower, 10 inches; hearth, 23x34 inches; height, 30 inches; weight each, 180 lbs...$38.20

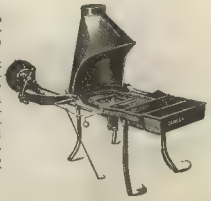
For horseshoers, small blacksmith shops, etc.; capacity to heat, 3½-inch iron.

Each.

*No. 103—Best and highest grade throughout; Royal blower, crank turns forward or backward; duck nest fire pot; blower, 10 inches; hearth, 23x34 inches; height, 30 inches; weight each, 185 lbs....$42.20

Largest portable forge made; capacity to heat 4-inch iron; adapted to the largest, heaviest work.

Solid, heavy fire pot with Tuyere Ball, furnishing side and center blast, all separate from hearth, no clay necessary; 12-inch Royal blower, crank turns forward or backward; hearth, 31½x45½ inches; height, 30 inches; length over all, 53 inches.

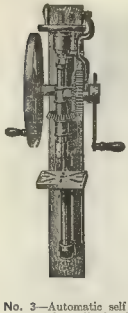


Each

*No. 100—With one tank; weight each, 295 lbs.....$45.00

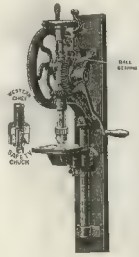
*No. 100ET—With extra tank (as illustrated); weight each, 325 lbs 50.00

*For shipment from factory only.



Each

No. 0—Automatic self feed drill; polished, well fitted bearings; cogs faced and polished; compressed steel, high grade shafting; drills to center of 12-inch circle; up and down rim of spindle, 2¾ inches; up and down rim of table, 9½ inches; greatest distance from table to spindle, 9½ inches; takes bits with ½-inch shanks; weight each, 75 lbs **$11.00**

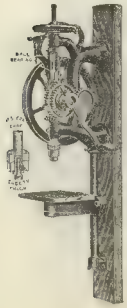


Each

No. 3—Automatic self feed drill; polished, well fitted bearings; cogs faced and polished; compressed steel, high grade shafting; drills to center of 14½-inch circle; up and down rim of spindle, 3½ inches; up and down rim of table, 11 inches; greatest distance from table to spindle, 10½ inches; size of pulleys for power, 8x2½ inches; revolutions, 200 per minute; spindle bored for ½ or 41/64 inch shank bits, as ordered. **$15.50**

***Power Attachment**—Tight and loose pulley **4.00**

Weight, 100 lbs.

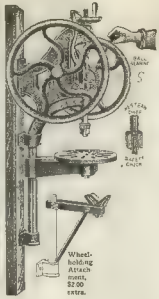


Each.

No. 1—Three changes of speed to the feed; slow, medium and fast; quick return. Two changes of speed, fast and slow, for light or heavy work. Rotating, slotted, swinging table. Drilling, returning and removing chips done with one motion, without stopping machine. Bores to center of 15 inch circle, from 0 to 1½ inches; takes bits ½ or 41-64 shank as ordered. **$26.00**

***Power Attachment**—Tight and loose pulley **4.00**

Weight, 135 pounds.



Each.

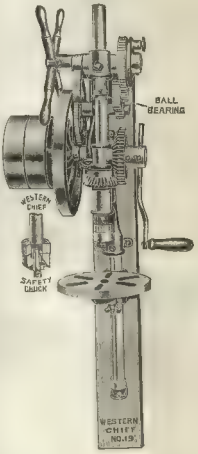
***No. 15**—Best material and workmanship; two speeds, fast and slow, for light or heavy work; self feed, cut gears, back geared, two-side fly wheels; has all the features of the highest grade drills; bores to center of 18 inch circle, from 0 to 1½ inches; takes bits ½ or 41-64 shank, as ordered; hand power only . . . **$29.70**

F. O. B. Chicago.

***No. 15P**—Same as No. 15, but with hand and pulley power **34.00**

F. O. B. Chicago.

Weight, 175 pounds.



A combined hand and self feed drill adapted to ordinary shop use. Hand and self feed are independent of each other, and for quick work, such as wood boring it is unsurpassed as bit is quick lifter.

Drills to center of 16½ inch circle. Bores 0 to 1¼ inch. Up and down run of spindle, 5½ inches. Up and down run of table, 11 inches. Greatest distance from table to spindle, 14 inches. Size of pulleys 8x2 inches. Should run 180 to 200 revolutions per minute.

On hand power machine, shaft is left extended so pulleys may be placed at any time. Spindle bored for ½ or 41-64 inch shank bits as ordered.

Each.

***No. 19U—Hand;** weight each, 130 lbs. **$24.50**

F. O. B. Chicago Hghts.

***No. 19UP—Hand and Power;** with pulleys, otherwise same as No. 19U; weight each, 140 lbs. **28.70**

F. O. B. Chicago Hghts

Stock sizes take No. 112 half-inch shank Drill Bits.
Drills fitted for ½ inch shank always sent unless otherwise ordered.
***For shipment from factory only.**
The Minnesota State Law now requires all Power Drills to be equipped with Gear Guards.

STOCK SADDLES

★NORLEIGH DIAMOND

★SECURITY BULGE

"ORIGINATED BY US"

The advantage of the Security Bulge Saddle over all other Saddles, lies in the Shape and Build of the Fork. The Swell of the Fork extends outward over the Base of it and I curves inward forman, a Natural Hook for the Thigh to rest against when Horse bucks or pitches. This gives the Rider a grip which the most violent shaking cannot dislodge. The Fork also swells backward, which prevents Rider from striking Horn or base of Horn, and averts any injury from that cause. These Saddles are made by Skilled Workmen of the Best Materials and are guaranteed to be the best in all respects that can be produced for the price.

★NEW TEXAS

Cut shows Rear View of Security Bulge.

★EL PASO

A first class, handsome Saddle with an Indestructible Tree.

This saddle is built on the **Indestructible Hays Endless Steel Wire Cable Rigged Tree**, plain Horn and Plain Bound Cantle and Front. All appointments are strictly first class. Best Oregon or California stock. Block and Star Hand Stamped Border.

*BRONCO BILL

This is the latest model of "Broncho Buster" saddle, in a light weight but strong pattern. The tree is very strong, has a very straight cantle. Seat is very high in front with a sharp slope to back, which is broad and flat, making with the wide bulge fork an extra secure and very comfortable seat. New design fan shaped, hand border decoration. Rawhide bound and rawhide braided horn. All materials used in this saddle are of the best.

For a classy, up-to-date, strong, comfortable saddle this one is the "Best Ever"
